announcement >

Product Change Notification TAJ Tantalum Standard Suffix Change to *NJ

As a result of feedback from our customers and an attempt to unify product part numbers globally AVX is intending to revise the standard TAJ series part number (PN) to include the *NJ ending as the last suffix letters.

The older PN structure for standard product:

TAJ	D	107	M	010	R ^(#)
Type	Case code	Capacitance Value	Cap. Tolerance	Rated DC	Packaging

The NEW PN structure for standard product:

TAJ	D	107	M	010	RNJ
Type	Case code	Capacitance Value	Cap. Tolerance	Rated DC	Packaging

The new PN structure maintains the first suffix letter (#) and adds the two additional characters NJ to the suffix. The older PN structure and the new PN structure refer to the same product so there is no change in form, fit or function.

The new NJ suffix part number will be mandatory for all new specification builds and replaces the old part number. The older part number structure will be maintained for already running projects only.

AVX catalogue, datasheets and other reference materials will be updated within six month of this announcement (May 09).
