#### How to read our catalog

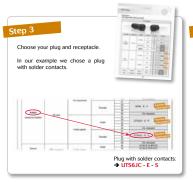

#### Example:

A 3 x 1.5mm² multicore cable carrying 10A of continuous current needs to be connected to a weatherproof enclosure.

The enclosure contains some expensive electronics, so it is important to ensure that it remains sealed even when the cable is not connected.

Your selection should be:

→ UTS6JC - E - S

Using the LITS layout guide you can select the insert arrangement code according to your needs. Replace -- by your choice → 12E3 for solder contacts.

#### Result:

6

Here your plug with solder contacts is UTS6JC12E3S

For any assembly questions please refer to the "assembly instruction" section (pages 54 to 57).

For discrimination see p.79.

#### **UTS Series**

# UTS range overview

The UTS series is a plastic connector range but rugged enough to withstand industrial applications.

The bayonet coupling system makes it simple to use.
With only a 1/3 twist of the coupling ring, connectors are mated with an audible and sensitive "click"

#### UTS series is a wide range...

Based on multiple power & signal connectors and offers everything from box mounted receptacles and cable mounted plugs to cable mounted in-line and PCB mounted receptacles. Almost all ways to accommodate wires exist: Crimp, Solder, Screw termination.

#### The philosophy of the UTS series is built around three key elements:

## Dynamic IP68/69K

UTS series is rated at IP68/69K... even in dynamic conditions. This means that it remain sealed even when used continuously underwater or cleaned using a high pressure hose and cable is moving.

This extreme level of performance is achievable with jacketed cable or discrete wires.

If this same level of performance is required even when connectors are not mated, we have UTS Hi Seal; a product designed to remain watertight if an environmental cap is not fitted or if the equipment is likely to get wet when cables have been disconnected.

#### LIV Resistant

In most applications, our connectors are exposed to extreme climatic conditions; it was therefore key for us to select the materials best able to cope with the targeted environment.

Part of our product qualification process involved subjecting connectors to a simulated five years of exposure to various elements including Temperature, LIV and Humidity.

The results were positive in that there were no visible signs of weakness, such as cracking or crazing.

## UL/IEC Compliant

The outmost priority for any electrical installation is to protect personnel from any shock hazard.

In North America, Underwriters Laboratories insisted that connector manufacturers, depending of the application, respect their standards. The UTS series had thus been qualified and is certified by this organisation.

In Europe and in Asia, IEC standards are better known and trusted by end users. Like its American equivalent, the IEC refers to safety rules. The UTS series was obviously designed to respect these rules.

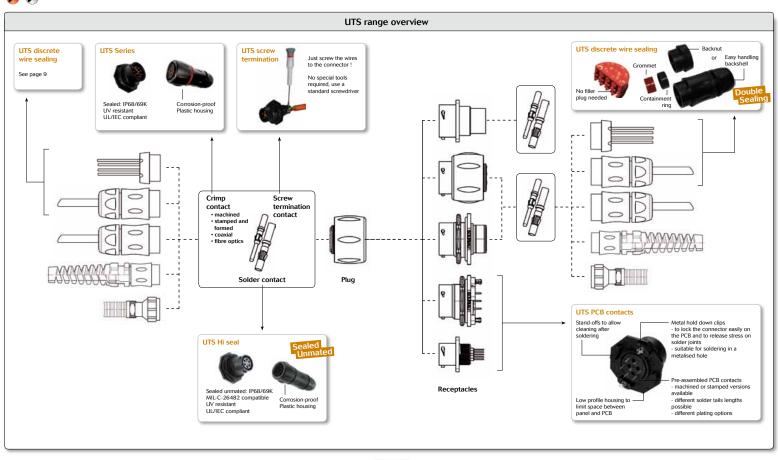

#### **UTS Series**

#### Mechanical

Durability:
 250 matings & unmatings per MIL-C-26482

Vibration resistance (all UTS versions except UTS Screw termination contacts):
 Sinusoidal vibrations per CEI 60512-4 - from 10 to 2000 Hz

5 cycles 30 min. from -40°C to 105°C per MIL-STD 1344 method 1003

#### Environmental

Operating temperature: from -40°C to +105°C 40/100/21 per NFF 61-030

Flammability rating:
 UL94-V0 (all UTS except the Hi seal) - see page 60
 UL94-HB (UTS Hi seal only) - see page 60
 I2F3 according to NFF 16101 and NFF 16102

3 • Salt spray: ≥500 hours

•UV resistant:
No mechanical degradation or important variation of colour
after 5 years of exposure in natural environment (equivalence
exposure to sun and moisture as per ISO4892)

Sealing:
 UTS Standard: IP68/IP69K (mated)
 UTS Hi seal: IP68/IP69K (mated and unmated)
 UTS Discrete wire sealing: IP67/69K (up to IP68 with easy handling backshell)
 UTS Circrev termination contacts: IP68/IP69K
 Note: IPx8: 1m underwater during 1 week

#### General technical characteristics

#### Electrical

• See pages 14 to 20

#### Material

Body connector + Backshell: Thermoplastic

Insert:
 UTS Standard, UTS Discrete wire sealing, UTS Screw termination contacts:
 Thermoplastic
 UTS His seal handsolder & UTS Hi seal with PC tails contacts:
 Elastomer

Contacts:
 See page 39

• Nut: Metal

Halogen free

RoHS compliant & conform to the Chinese standard SJ/T1166-2006 (Chinese RoHS equivalent)

In accordance with:

- UL 1977:

Certificat ECBT2
File number: E169916

- CSA C22.2 n°182.3:

Certificat ECBT8
File number: E169916

#### PMA adapter

Only size 12 & 14

To get a PMA adapter you should change JC to PMA. Ex: UTS6JC -- S → UTS6PMA - - S

## Bending protection spiral

IP68/69K version

To get a spiral protection you should change JC to JS. Ex: UTS6JC - - S → UTS6JS - - S

#### Cable assembly

Souriau provides connectors in various applications for more than 90 years in the most extreme environment.

Being conscious about the difficulty to find a quick and a reliable harness manufacturer, we decided years ago to start in house cable assembly production. It allows customers to reduce the number of suppliers, and to take advantage of the "best in class" quality of the Souriau group. Overmouding is a process that further enhances the sealing properties of the LITS range, especially over many years of use. Overmouding provides the opportunity to change the cable exit from straight through 90 degrees and avoid any stress on the cable terminated to the connector. Also, as the wires are encapsulated inside the moulding, a barrier is created which prevents from any liquid from entering the equipment through the connector if the cable jacket is breached.

In this section you'll find standard cable sets but as all customers are unique we are happy to adapt our proposal to your specific needs on demand.

Other lengths and configurations: on demand, see factory. Note: UTS standard necessarily with gold plated stamped & formed contacts. For coding "--" see p. 37  $\,$

	#16 coaxial contacts	4
	PCB contacts	4
	Fibre optic contacts	4

#### **Contacts**

#### Description

The UTS series is delivered with Isolder and PCB versions) or without contact (crimp version). When contacts are not loaded, this series offers the unique possibility to use the same contact in any layout as long as it receives the same active part size. Thus it is possible to buy only one contact reference and equip all connectors even if housings are different.

The main benefit is the standardisation which means reduction of inventory cost.

Bearing in mind that any additional tool or complicated assembly process should be avoided, our contacts are based on a snap-in principle which avoid the use of an insertion tool.

• fiber optic

In addition, UTS series can obviously be equipped with solder contacts, PCB contacts, screw termination.

#### **UTS Series**

#### Contact plating selector guide

As soon as you know what contact size you need, you next have to decide on which type to use. Souriau proposes mainly two different types of electrical contacts:

- Machined

- Stamped & formed

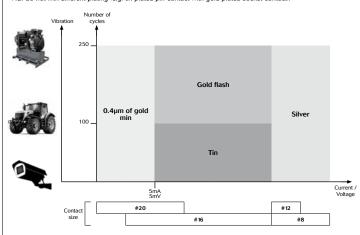

Machined contacts are generally chosen for low quantities purpose as well as a better solution for power

Stamped & formed contacts offer the ability to be crimped automatically which makes them more suitable for high volume production applications.

Then comes the question: What plating should I choose ?

Hereunder is a graph with criteria to guide you:

NB: do not mix different plating (e.g. tin plated pin contact with gold plated socket contact).

#### Contact selector guide

#### Contact preloaded

Electrical cha	naracteristics: contact resistance	
#20 Ø1mm	Machined	< 4mΩ
#16 Ø1.6mm	Machined	< 3mΩ

Available platings (contact preloaded)	
Min 0.4μ gold over 2μ Ni	

#### Contact supply separately

Electrical cha	aracteristics: conta	ct resistance
#20	Machined	< 6mΩ
Ø1mm	Stamped & formed	< 15mΩ
#16	Machined	< 3mΩ
Ø1.6mm	Stamped & formed	< 6mΩ
#12 Ø2.4mm	Machined	< 5mΩ
#8 Ø3.6mm	Machined	< 5mΩ

Available	Available platings (contact supply separately)		
A	2μ Ni + 2μ Ag		
J	Gold flash over 2µ Ni		
К	Min 0.4μ gold over 2μ Ni		
S31	Active part: Gold flash over Ni Crimp area: Nickel		
S18	Active part: 0.75µ gold min over 2µ Ni Crimp area: 1.3µ tin over Ni Other: Nickel		
S25 S26	Active part: 0.75µ Au over Ni Crimp area: flash Au over Ni		
т	T: 2μm Ni mini all over + 3 to 5 μm Sn all over		
TK6	2-5µ Sn pre-plated		

#### Packaging

Conscious of the wide variety of applications, contact packaging has been considered for small series (bulk packaging) and high volume production (reeled contacts):

42

50 pieces bulk packing (standard)

1000 pieces bulk packing

3000 pieces reeled stamped & formed contacts

5000 pieces reeled machined contacts

## **UTS Series**

#### How to make FMLB / LMFB connection

Contact 1 Contact 2	Standard male contact	Standard female contact	Longer male contact
Standard male contact		<b>√</b>	
Standard female contact	<b>✓</b>		FMLB
Shorter female contact	LMFB		

First Mate Last Break contacts should be chosen only if the cavity is not marked with the earth symbol. For cavities marked with the earth symbol, standard contacts will fulfill the same role as a first mate, last break contact used in a standard cavity.

Ground symbo

#### **UTS Series**

#### #16 coaxial contacts

#### Coaxial contact range

We provide 2 types of coaxial contacts suitable for 50 or  $75\Omega$ , coaxial cable or twisted pair cable.

#### Monocrimp coaxial contact

- The monocrimp one-piece coaxial contacts offer high reliability plus the economic advantage of a 95% reduction in installation time over conventional assembly methods.
- This economy is achieved by simultaneously crimping both the inner conductor and outer braid or drain wire.

#### Multipiece crimp coaxial contact

- The inner conductor and outer braid is crimped individually.
- The thermoplastic insulating bushing in the outer body is designed to accept and permanently retain the inner contact.
- An outer ferrule is used to connect the braid to the outer contact and provide cable support to ensure against bending and vibration.

#### Suitable for Coaxial cable or Twisted cable

 For jacket diameter from 1.78 to 3.05mm Inner conductor up to 2.44mm diameter

 For jacket diameter from 0.64 to 1.45mm Inner conductor from AWG30 to AWG24

#### **Tooling**

#### **Automatic crimping tools**

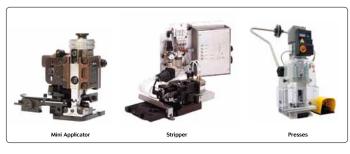

Mecal is leader in manufacturing tooling for crimping terminals over a stripped wire. Established in 1976, Mecal has become one of the world's leading companies dedicated to the design and manufacture of semi automatic production tools for strip fed, open barrel crimp terminals, serving the Automotive, Telecom and Datacomm industry.

The extreme environment interconnect specialist "from deep sea to deep space". Souriau designs manufactures and markets high performance interconnect solutions for severe environments dedicated to the aerospace, defence, light and heavy industry markets.

Souriau has been working in partnership with Mecal for a good number of years. With sales offices located in all major industrial regions of the world, the combined strengths of both organisations has resulted in a truly global solution to all your production tooling needs.

#### **UTS Series**

#### Rated current & working voltage

The **rated current** is defined as uninterrupted continuous current that a connector can take without exceeding the maximum limit of temperature. The earth contact is never loaded.

Solar radiation affects all materials, but plastics can be susceptible to extreme degradation over time. The choice of materials for the UTS series was therefore a critical consideration.

All over the world we are not exposed to the same amount of energy given by the sun. The chart shown here clearly illustrates this.

So we performed test according to the ISO 4892.2 and simulated 5 years exposure to outdoor environments temperature, humidity, etc... After this period there was no significant colour variation, no crazing, no cracking and no major variation of mechanical properties.

# **UV** resistance Yearly mean of daily irradiation in UV (280-400 nm) on horizontal plane (J/cm²) (1990-2004)

To ensure that the crimp tooling is performing according to original specifications, it is important to carry out regular checks. A common way to check the performance of tooling is with a simple pull test, ideally using a dedicated electric pull tester. Minimum recommended full forces are indicated in the tables

force N

Conductor

cross-section MM<sup>2</sup> AWG 16 14

#### Crimping

One of the key factors which affects the performance of a connector, is the way contacts are terminated. Crimped connections are nowadays seen as the best solution to ensure quality throughout the lifetime of the product. Here are some reasons why we recommend this method of termination for LITS connectors:

- Efficient processing of connections at each production level
   Processing by fully-automatic or semi-automatic crimping
  machines, or with hand operated tools
   No cold-soldered joints
   No degradation of the spring characteristic of female contacts
  by the soldering temperature
   No health risk from heavy metal and flux steam
   Preservation of conductor flexibility behind the crimped
  connection
   No buntt, discolored and overheated wire insulation
   Conditionations with promoticible electrical and mechanical

- Good connections with reproducible electrical and mechanical
- performances Easy production control

#### **UTS Series**

## Underwriter Laboratories C SUS

#### There are two main standards for industrial connectors: UL94 & UL1977

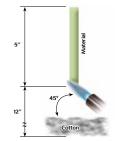

#### 11194

This standard is dedicated to plastics flammability. It characterises how the material burns in various orientation and thicknesses.

The UTS series has been rated at V-0 & HB.

Procedure: A specimen is supported in a vertical or horizontal position and a flame is applied to the bottom of the specimen. The flame is applied for ten seconds and then removed until flaming stops, at which time the flame is reapplied for another ten seconds and then removed. Two sets of five specimens are tested. The two sets are conditioned under different conditions.

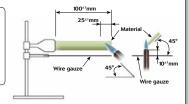

- V-0 Vertical burning:
   Specimens must not burn with flaming combustion for more than 10 seconds after either test flame application.
   Total flaming combustion time must not exceed 50 seconds for each set of 5 specimens.
- Specimens must not burn with flaming or glowing combustion
- Specimens must not durn with naturing or growing contour up to the specimen holding clamp.
   Specimens must not drip flaming particles that ignite the cotton.
   No specimen can have glowing combustion remain for lo
- No specimen can have glowing combustion remain for longer than 30 seconds after removal of the test flame.

- HB Horizontal burning:

   A material classed HB shall not have a burning rate exceeding 40 mm per minute over a 75 mm span for specimens having a thickness of 30 to 13 mm.

   A material classed HB shall not have a burning rate exceeding
- 75 mm per minute over a 75 mm span for specimens having a thickness less than 3.0 mm.
- A material classed HB shall cease to burn before the 100 mm reference mark.

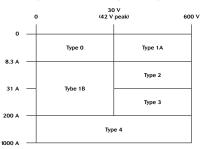

There are several standards which deal with plug and receptacle. Each of them is only for a small area of applications. It could be telecommunication, Etc. The UL 1977 covers single and multipole connectors intended for factory assembly.

Underwriter Laboratories Calus

Requirements apply to devices in taking into account intensity and voltage. There a categories as follows:

According to above table, the level of performance that has to be reached could be different. Most of them are explained in the following page

#### Insulating materials:

Material uses for electrical insulation, as a minimum, have to comply with the characteristics shown below:

#### Minimum ratings for polymeric materials

Туре	Flame rating	Relative thermal index (RTI) Electrical/mechanical w/o impact */**	
0	-	50/50	Ī
1A	HB	50/50	
1 B	HB	50/50	Ξ
2	HB	50/50	Ī
3	HB	50/50	_
4	HB	50/50	Ξ.

Connector has to be keyed to prevent any mismating that can damage the machine or hurt the user. In the same way, plugs and sockets have to be equipped to protect persons against contact with live parts. Finally the identified grounding contact shall be located so that the corresponding electrical continuity has to be completed before any other contact.

62

## **UTS Series**

#### Underwriter Laboratories Calus

#### **UL1977**

#### Spacing:

For a 250V max connector, distance through air or over material shall be 1.2mm whereas from 250V to 600V connector the spacing is 3.2 minimum. These distances have to be taken between uninsulated live parts as shown in the matrix below:

#### Applicability of spacing requirements

Туре	Uninsulated live part - uninsulated live part of opposite polarity	Uninsulated live part - uninsulated grounded metal part	Uninsulated live part - exposed dead metal part
0	No	No	No
1A	Yes	Yes	Yes
1B	Yes	Yes	No
2	Yes	Yes	Yes
3	Ves	Ves	Ves
4	Ves	Ves	Ves

An alternative way to determine voltage rating is with the Dielectric-Withstand test. If during one minute there is no arc-over or breakdown the rated voltage is given as given below:

a) 500 volts for a type 1B deviceb) 1000 volts plus twice rated voltage for types 1A, 2, 3 and 4 devices.

#### Marking:

A device shall be legibly marked with the manufacturer's trade name, trade mark, or other descriptive marking by which the organisation responsible for the product may be identified. Exception: If the device is too small, or where the legibility would be difficult to attain, the manufacturer's name, trademark, or other descriptive marking may appear on the smallest unit container or carron

The following shall be marked on the device or on the smallest unit container or carton or on a stuffer sheet in the smallest unit container

a) The catalogue number or an equivalent designation
 b) The electrical rating in both volts and amperes, if assigned
 ob Whether ac or dc, if restricted
 d) Flammability class, if identified

Example - Marking for the arrangement 10-3: 10A 500V UL94 V-0

#### IEC 61984

The norm is dedicated to connectors with rated voltage above 50V and up to 1000V and rated currents up to 125A per contact. But depending of your application connectors should be compliant with another standard. This has to be double checked with the customer.

There are lot of constructional requirements and performances specified in that standard. Most of them are illustrated in greater details hereafter.

#### Provisions for earthing:

The UTS connector is intended to be used on Class II systems. Even if the purpose of our connector is not to interrupt current, we often see a need to add a protective earth contact. Then this one shall be a "First mate, last break" style. Critically, among all of the normal assumptions we make in designing a connector, this contact has to be considered as a live part and must be protected against electric shock. by double or reinforced insulation

#### IP Code:

IP is a coding system defined by the IEC 60529 to indicate the degrees of protection provided by an enclosure. The aim of this is to give information regarding the accessibility of live parts against ingress of water and other foreign bodies.

1st digit	Degree of protection	2 <sup>nd</sup> digit	Degree of protection
0	No protection against accidental contact. No protection against solid foreign bodies.	0	No protection against water.
1	Protection against contacts with any large area by hand and against large solid foreign bodies with a diameter bigger than 50 mm.	1	Drip-proof. Protection against vertical water drips.
2	Protection against contacts with the fingers. Protection against solid foreign bodies with a diameter bigger than 12 mm.	2	Drip-proof. Protection against water drips up to a 15° angle.
3	Protection against tools, wires or similar objects with a diameter bigger than 2.5 mm. Protection against small solid bodies with a diameter bigger than 2.5 mm.	3	Spray-proof. Protection against diagonal water drips up to a 60° angle.
4	As 3 however diameter is bigger than 1 mm.	4	Splash-proof. Protection against splashed water from all directions.
5	Full protection against contacts. Protection against interior injurious dust deposits.	5	Hose-proof. Protection against water (out of a nozzle) from all directions.
6	Total protection against contacts. Protection against penetration of dust.	6	Protection against temporary flooding.
	1170 // 111 //	7	Protection against temporary immersions.
	UTS offers high sealing performance IP68 / 69K Even in dynamic situations.	8	Protection against water pressure. Pressure to be specified by supplier.
	1	which are First dig Second	n to the IEC 60529 we conjointly use the DIN 40050 part is dedicated to road vehicles. The main differences the sit 5 replaced by 5K, 6 by 6K. In the DIN the tested equipment is not depressurated as it is in the IEC. digit: 5K and 6K has been added and are equipment respectively to 5 and 6 by with higher pressure. 9K which represents the High pressure cleaning.
		9K	High pressure hose-proof.  Protection against high pressure water (out of a nozzle) from all directions.
	d.2.0 "Copyright © 2008 IEC Geneva, Switzerland.www.iec.ch" ed.2.0 "Copyright © 2007 IEC Geneva, Switzerland.www.iec.ch"		

#### **UTS Series**

#### IEC 61984

#### Overvoltage

UTS connectors are qualified to be used on systems rated at Overvoltage category III

Per the IEC 60664-1 (formely VDE 0110) each category is linked to the end application and where the device will be implemented:

- Category IV (primary overcurrent protection equipment):
  Origin of the installation
- Category III (Any fixed installation with a permanent connection)

  Fixed installation and equipment and for cases where the reliability and the availability is subject to special requirements

Category II (Domestic applicances):
Energy consuming equipment to be supplied from the fixed installation

- Category I (Protected electronic circuit):
  For connection to circuit in which measures are taken to limit transient overvoltage.

#### Pollution degree

Per the IEC 60664-1 (formerly VDE 0110) the environment affects the performance of the insulation. Particles can build a bridge between two metal parts. As a rule dust mixed with water can be conductive and more generally speaking metal dust is conductive. Finally, the standard defines 4 levels of pollution:

- Degree 1 (Air conditioned dry room):

  No pollution or only dry, non conductive pollution occurs. The pollution has no influence.

• Degree 2 (Personal computer in a residential area): Only non conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be expected.

• Degree 3 (Machine tools): Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.

• Degree 4 (Equipments on roof, locomotives): Continuous conductivity occurs due to conductive dust, rain or other wet conditions.

Finally, the harsher the environment is, the longer clearance and creepage distances should be. Nonetheless, according the IEC 61984, enclosure rated at IPS4 or higher can be dimensioned for a lower pollution degree. This applies to mated connectors disengaged for test and maintenance.

#### Marking

The marking should give enough details to the user to know what the main characteristics are and without going deep in technical documentation. Below examples identify the suitability of the connector:

• Example 1: Marking of a connector with rated current 16A, rated voltage 400V, rated impulse voltage 6kV and pollution degree 3, 2 and 1 for use in any system, preferably unearthed or delta-earthed systems:

16A 400V 6kV 3

• Example 2:

Marking of a connector with rated current 16A, rated insulation voltages line-to-earth 250V, line-to-line 400V, rated impulse voltage 4kV and pollution degree 3, 2 and 1 for use in earthed systems:

16A 250V 400V 4kV 3

#### **UTS Series**

## · NEMA ratings vs IP ratings Whereas IP ratings only consider protection against ingress of foreign bodies - first digit - and ingress of water (second digit), NEMA ratings consider these but also verify protection from external ice, corrosive materials, oil immersion, etc. The correlation between NEMA & IP being limited only to dust and water, we can state that a NEMA type is $equivalent\ to$ an IP rating but it is not possible to say the contrary.

What is NEMA rating?

Below a list of some NEMA standards:

Enclosure rating	IP20	IP22	IP55	IP64	IP65	IP66	IP67
Type 1	•						
Type 3				•			
Type 3R							
Type 3S				•			
Type 4							
Type 4X						•	
Type 6							
Type 12			•				
Type 13					•		

6P

Type 6 rating can be either Type 6 or Type 6P - please see below:

Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, falling dirt, hose-directed water, the entry of water during prolonged submersion at a limited depth and damage from external ice formation. IP67

#### **UTS Series**

#### Glossary of terms

Clearance
Per the IEC 60664-1 it is the shortest distance between two conductive parts even over the air.

- - - Air gap
----- Creepage distance

Working voltage
Per the IEC 60664-1 it is the highest r.m.s. value of A.C. or D.C.
voltage across any particular insulation which can occur when the equipment is supplied at rated voltage.

Rated impulse voltage Impulse withstands voltage value assigned by the manufacturer to the equipment or to a part of it characterizing the specified withstand capability of its insulation against transient overvoltage.

Working current
It is the maximum continuous and not interrupted current able
to be carried by all contacts without exceeding the maximum
temperature of the insulating material.

Transient voltage
 Extract from the IEC 60664-1: Short duration overvoltage of a few milisecond or less, oscillatory or non-oscillatory, usually lighly damper.

•CTI (Comparative Tracking Index)
The CTI value is commonly used to characterize the electrical breakdown properties of an insulating material. It allows users to know the tendency to create creepage paths. This value represents the maximum voltage after 50 drops of ammonium chloride solution without any breakdown.

• RTI Relative temperature Index):
Extract from ULs website:
"Maximum service temperature for a material, where a class of critical property will not be unacceptably compromised through chemical thermal degradation, over the reasonable life of an electrical product, relative to a reference material having a confirmed, acceptable corresponding performance defined RTI.

- RTI Elec: Electrical RTI, associated with critical electrical insulating properties.
- RTI Mech Imp: Mechanical Impact RTI, associated with critical impact resistance, resilience and flexibility properties.
- RTI Mech Str: Mechanical Strength (Mechanical without Impact) RTI, associated with critical mechanical strength where impact resistance, resilience and flexibility are not essential"

#### Discrimination/Keying methods

In applications where similar connectors are used next to each other, mismatching can be a reason for disturbances, system failure or even danger to operating personnel.

To eliminate mismatching, all TRIM TRIO\* connectors can be equipped with discrimination keys, which offer unlimited possibilities for an error avoiding interconnection system.

The other way around is to rotate the insert into the shell.

Connectors with rotated inserts can be ordered by adding the suffix W, X, Y or Z to the standard part number.
e.g. UTS6JC104S (N key) → UTS6JC104SW (W key)
