# Introduction

## TRIM TRIO - The principle

The TRIM TRIO interconnection system is a fully integrated system, in which 4 contact types can be used in a variety of connector styles and sizes, ranging from 1 to 104 contact positions.

This interchangeability offers boundless design possibilities with a large commonality throughout the entire range.

The commonality in the system is established in:

- contact performance and wire range.
- configuration of contact cavities in the housings.
- crimp tooling
- assembly procedures.
- quality assurance procedures.
- field service and maintenance.
- personnel training.

### Products

The contacts, both male and female, accommodate a wire range of AWG14 up to AWG30. The 4 contact families are:

- Machined contacts for high performance (up to 13 Amp current rating), with gold or tin plating.
- Stamped and formed two-piece contacts, for more cost effective applications (up to 13 Amp current rating).
- Subminiature coaxial contacts, in a multi-piece and a mono-crimp version, for coaxial or twisted-pair cables.
- Fibre optic contacts to accommodate 1000µ plastic fibres with a cable diameter of 2.2 mm.

The housings offer many options in contact cavities and backshell possibilities

The main version are:

- circular connectors:
  - full metal
  - plastic with metal coupling system
  - full plastic
  - metallised plastic for shielding
  - plastic with quick mating feature
- rectangular, high performance, rack and panel and printed circuit board versions.
- rectangular, low cost, rack and panel and printed circuit board versions.
- rectangular connectors for V.35 applications.
- rectangular connectors for I/O applications.

(See TRIM TRIO selection matrix on the next page)

*The beauty of the TRIM TRIO system means that the 4 contact types can be combined (both male and female) in any TRIM TRIO connector type of any geometry.*

The keywords in the TRIM TRIO interconnection system are standardisation, versatility, reliability and economy.

These words explain why the TRIM TRIO name is so well known, and its connectors are used all over the world.

### Standardisation

- The same contact cavity for each type of housing
- identical crimp tooling for all types of contacts except fibre optics

- reduced manufacturing methods
- standardised operator training
- international acceptance

### Versatility

- wide range in current capability
- various contact platings
- wire and cable accommodations
- housings accommodate pin and socket (male and female) contacts
- variety of terminations
- variations in mounting
- number of sizes
- discrimination keying
- broad range of installation tooling
- variety of possible applications

### Reliability

- proven materials
- guaranteed quality assurance per ISO 9001 certification
- rigid inspection procedures
- positive polarisation
- pin protection
- rugged mouldings
- restricted entry contacts

### Economy

- low assembly cost
- minimal tooling downtime
- easy connecting and disconnecting
- low wiring cost
- simplified personnel education
- low inspection cost
- removable contacts
- reduced number of components
- low installed cost

# Introduction

## Versatility

## TRIM TRIO selection matrix

# Circular

## Description

The TRIM TRIO circular connectors are an integrated group of economical, reliable, versatile standardised connectors for a broad spectrum of interconnection applications.

Being derived from MIL-C-26482 ,input and output connections can be made with a large number of sizes ranging from:

- 3 to 48 contact positions in TRIM TRIO
- 4 to 46 contact positions in MBG Bantamate II

## What are the links and differences between TRIM TRIO circular, and MBG Bantamate II

To avoid misunderstandings on the circular connector ranges, it has to be clearly understood that there are inevitable links and differences between all the circular product ranges (see fig).

## Intermateability

- TRIM TRIO circular connectors are available in UTO, UTG, UTP and UTGS and are fully intermateable, interchangeable and intermountable.
- MBG Bantamate II with the unique quick mating feature plus high number of mating cycles is not mateable with other TRIM TRIO circular connectors.

## Contacts

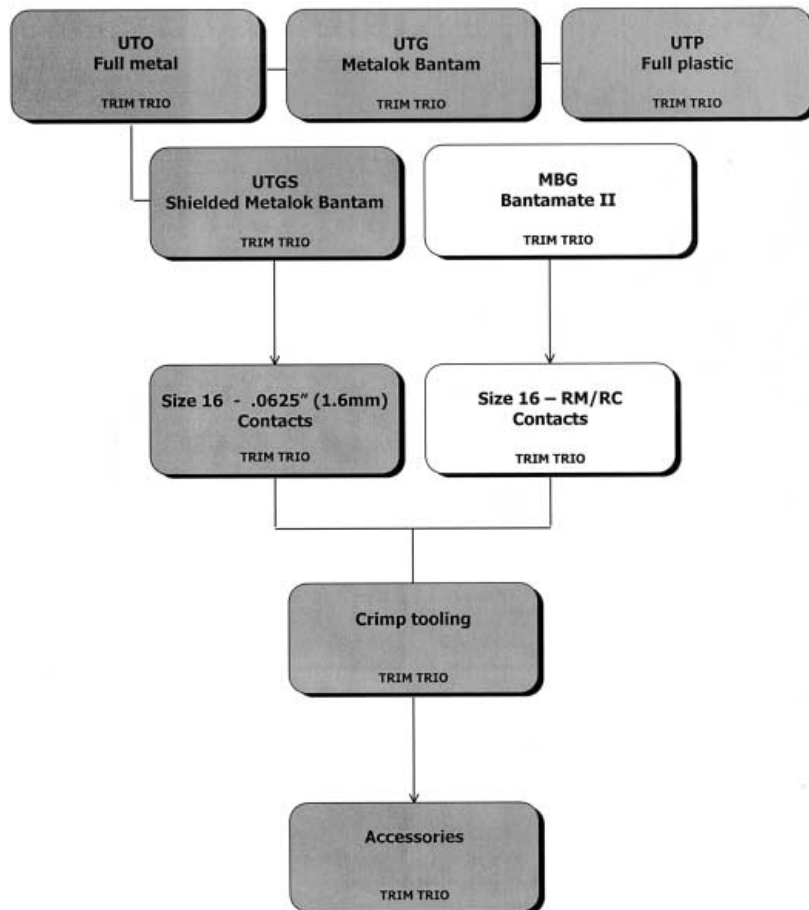

- TRIM TRIO and MBG Bantamate II circular connectors use the size 16 TRIM TRIO contacts available in machined, stamped and formed, coax and fibre optic versions.

## Accessories

- TRIM TRIO use the same accessories such as backshells and dustcaps.
- MBG Bantamate II has his own backshell

## Tooling

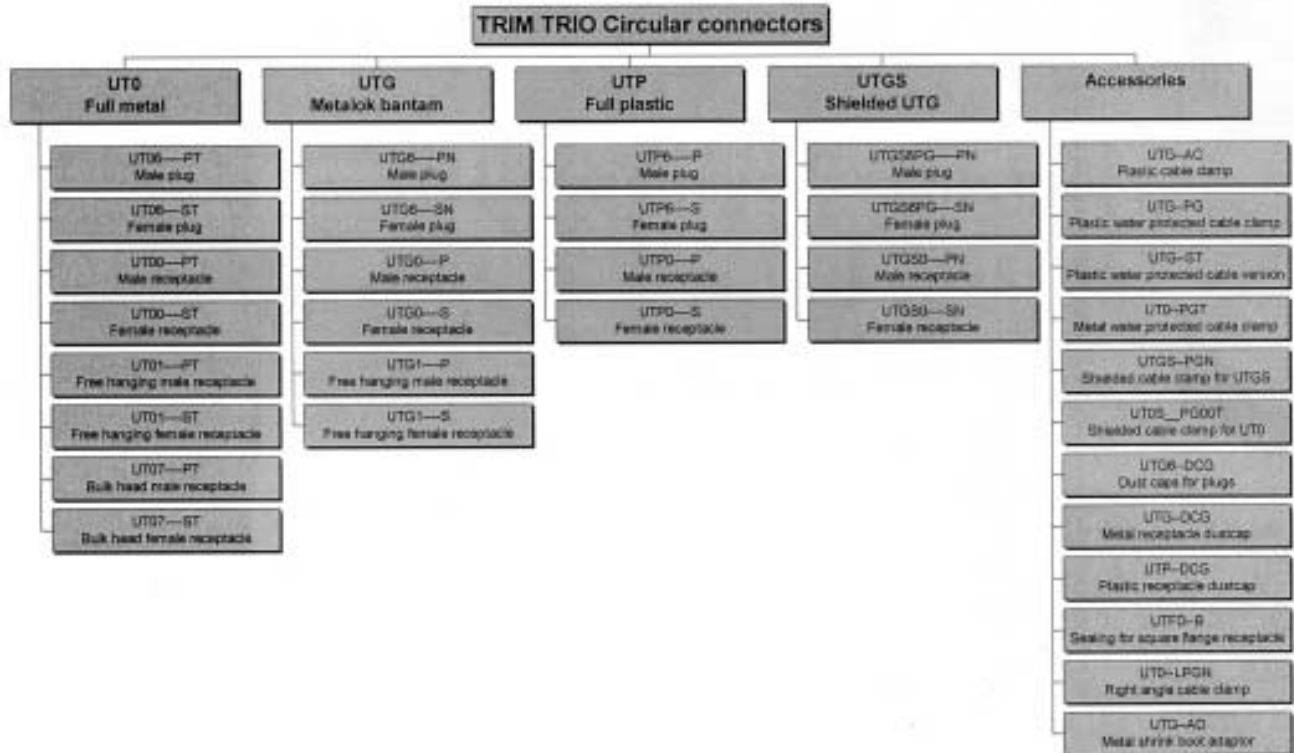

- TRIM TRIO and MBG Bantamate II use all the same crimp barrels per wire size and the same crimp tooling.

## Plastic connector with metal coupling system

### Description

“UTG” Metalok Bantam plastic industrial circular connectors with metal coupling are a range of multiway connectors to provide the complete answer to the need for lightweight, robust circular connectors. They are available in 8 shell sizes, 11 insert arrangements **all intermateable, interchangeable and intermountable** with the Trim-Trio “UT0” and “UTP” industrial connector families.

UTG

### Features and benefits

- Available in 8 shell sizes and 11 insert arrangements incl. 3 VDE versions.
- Available in plug and receptacle versions for both male and female contacts.
- Connectors and accessories are moulded from highly durable glass-filled thermoplastic.
- Flammability rating: UL94-V0.
- UL approved-file Nr.: E31151
- Metal bayonet ring:
  - Metal wave spring loaded.
  - Locks with audible positive “click”
  - Assures 500 matings and unmatings

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration resistance:	Per MIL-STD202 method 204
Thermal shock:	Per MIL-STD202 method 207
Degree of protection per DIN 40050: IP67 in mated condition. “H” version used with UTG —ST cable clamp	

### Construction

Connector body	Glass filled thermoplast UL94-V0
	Colour: black
Coupling ring:	Nickel plated brass
Tri-lock pins:	Stainless steel
Coupling spring:	Spring steel

### Contact accommodation

- “UTG” connectors accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

# UTP - Full plastic Bantam

## Full plastic circular Trim Trio connector

### Description

"UTP" full plastic industrial circular connectors are a range of multiway connectors.

"UTP" provides the complete answer to the need for economical lightweight, robust circular connectors and is unique in offering a plastic bayonet coupling ring incorporating a metal wave spring, which locks with an audible positive "click". It is available in 8 shell sizes, 10 insert arrangements all interchangeable, interchangeable and intermountable with the Trim-Trio "UT0" (full metal) and "UTG" (plastic with metal coupling ring) industrial connector families.

### Features and benefits

- Available in 8 shell sizes and 10 insert arrangements incl. 2 VDE versions.
- Available in plug and receptacle versions for both male and female contacts.
- Connectors and accessories are moulded from highly durable glass-filled thermoplastic.
- Flammability rating: UL94-V0.
- Plastic bayonet ring:
  - Vibration proof thermoplast
  - Metal wave spring loaded.
  - Locks with audible positive "click"

UTP

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	250 matings and unmatings.
Degree of protection per DIN 40050: IP67 in mated condition. "H" version used with UTG--ST cable clamp	

### Construction

Connector, Bayonet ring and accessories
Gas filled thermoplast UL94-V0
Colour: black
Coupling spring: Spring steel

### Contact accommodation

- "UTP" connectors accept Trim-Trio removable snap-lock contacts (see contacts section)
- Contacts to be ordered separately.

# Shielded connectors

## Shielded circular TRIM TRIO connectors UT0 and UTGS

### Description

With the increasing coverage of the electromagnetic spectra and the constantly increasing use of electronic hardware, the need for control on electronic equipment to operate in electromagnetically noisier environments and greater control is one of the main issues.

More and more electronic equipment will be required to meet an EMC (Electro Magnetic Compatibility) specification which controls the level of EM emissions being upset by interfering RF (Radio Frequency) and EM (Electro Magnetic) fields.

A full solution to the problem consists in the consideration of each and every aspect within a design, starting at the board level and working outwards through the connector to the enclosure and then on to the power supply and signal cabling.

As a result, UT0 and UTGS are available with shielded backshells including a “two conical ferrule shielding system”.

Shielding effectiveness is a functional method to characterise the shield leakage, since it offers us the relation between the measured power progression from shielding leakage and the reference power delivered to the test-cel.

### Test set-up

The measurements are performed with the triaxial setup.

The connectors are embedded in a rectangular testcell (see picture)

For the circular connectors an inner conductor is constructed to obtain a 50Ω coaxial transmission line, to which a power level  $P_{in}$  is delivered. The shield of the connector and the walls from the triaxial cell form the second coaxial transmission line. The output power

$P_{out}$  at one end of the short-circuited second transmission line is measured with a spectrum analyser. From the average of these quantities, the shielding effectiveness is calculated (see formula and resulting chart).

### Formula: Shielding effectiveness in dB

$$S. E. \text{ (dB)} = 10 \times \text{Log} \left( \frac{P_{in}}{P_{out}} \right)$$

### Shielding effectiveness chart for UT0 and UTGS

# Shielded connectors

## How to assemble shielded connectors ...

SIZE-NR.	POS.	DIM E
10	- 4	22.3
12	- 8	22.3
14	- 12	26.2
16	- 19	28.1
18	- 23	31.7
20	- 28	35.3
22	- 35	40.5
24	- 48	44.4

Put all parts over the cable, including the coupling ring, as mentioned on the picture.  
Strip the outer jacket with the dimensions given in the table.

Recommended cable strip dimensions

Bend the braid backwards over the cable jacket.  
Strip the wires (refer to contact section).  
Crimp the contacts.

Insert contact into connector.  
Slide inner shielding ferrule over the connector.

Bend the braid back over the conical part of the inner shielding ferrule.  
Cut the shield so that it does not pass the front edge as shown

Wrap shielding around inner shielding ferrule using a conductive tape.  
Make sure that the braid is wrapped equally around the ferrule to avoid misalignment when assembled.

# Shielded connectors

## How to assemble shielded connectors ... (cont.)

Slide coupling ring forwards over the connector.  
Slide outer shielding ferrule over the shield.  
Push the cable a little forward to avoid stress on wires, contact and braid after tightening the PG-tube.

Screw the PG-tube onto the connector using a strap wrench.  
Put the plug in an empty receptacle and fix the receptacle in a bench.  
Tighten the PG-tube with the recommended torque moments given in table and prevent the cable of twisting.  
For Strap wrench and torque meters consult factory.

Screw the sealing and the PG-nut into the PG-tube to achieve sealing.  
Tighten up cable clamp.  
**Note:** Tightening the PG-tube with its PG-nut and sealing might twist the braid.

SIZE-NR.	POS.	TORQUE PG-TUBE
10	- 4	4 Nm max.
12	- 8	6 Nm max.
14	- 12	10 Nm max.
16	- 19	10 Nm max.
18	- 23	10 Nm max.
20	- 28	15 Nm max.
22	- 35	15 Nm max.
24	- 48	15 Nm max.

Recommended torque moments to tighten PG-tube onto connector.

Shielded connector in assembled condition.

# UTGS - Shielded Bantam

## Metallised plastic connector for EMC requirements

### Description

“UTGS” Shielded Bantam are a range of industrial circular connectors suitable for EMC requirements.

It is a range of multiway connectors available in 8 shell sizes and 11 insert arrangements all interchangeable, interchangeable and intermountable with the Trim-Trio “UT0” metal connector families.

Finding its origin in the “UTG” range, “UTGS” keeps the metal locking system, whilst the connectors are selectively metallised.

This together with a new shielded backshell offers a competent, reliable, user friendly and cost effective solution .

UTGS

### Features and benefits

- Suitable for EMC requirements.
- Shielded backshell is independent from the cable diameter and its shielding.
- Available in 8 shell sizes and 13 insert arrangements incl. 3 VDE versions and one power version.
- Available in plug and receptacle versions for both male and female contacts.
- Connectors are moulded from highly durable glass-filled thermoplastic. Selectively nickel plated
- Flammability rating: UL94-V0.
- Metal bayonet ring:
  - Metal wave spring loaded.
  - Locks with audible positive “click”
  - Assures 500 matings and unmatings

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration resistance:	Per MIL-STD202 method 204
Thermal shock:	Per MIL-STD202 method 207
Corrosion:	Salt spray per MIL-STD 202 method 101
Shielding effectiveness: 95 dB at 1 Mhz (See shielded connectors section)	
Degree of protection per DIN 40050: IP67 in mated condition. “H” version	

### Construction

Connector body	Glass filled thermoplast UL94-V0
Colour:	black
	Selectively nickel plated
Coupling ring:	Nickel plated brass
Tri-lock pins:	Stainless steel
Coupling spring:	Spring steel
Shielded backshell :	Nickel plated Aluminium alloy.

### Contact accommodation

- “UTGS” connectors accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

## Metal circular connector

(Suitable for EMC requirements)

### Description

“UTO” Bantam industrial circular connectors are a range of multiway connectors available in 8 shell sizes and 8 insert arrangements all intermateable, interchangeable and intermountable with the Trim-Trio “UTG” , “UTGS” and “UTP” industrial connector families.

“UTO” is equipped with identical shells from military connectors complying to MIL-C-26482 spec.

Strong and rugged built to resist every environmental and mechanical requirement for indoor and outdoor applications.

In combination with the shielded backshell , “UTO” offers the perfect solution to EMC requirements.

### Features and benefits

- Suitable for EMC requirements.
- Shielded backshell is independent of the cable diameter and its shielding.
- Available in 8 shell sizes and 8 insert arrangements.
- Available in plug and receptacle version for both male and female contacts.
- Shells and accessories are made from tin plated corrosion resistant Aluminium.
- Plastic inserts with flammability rating: UL94-V0.
- Alu. bayonet ring:
  - Metal wave spring loaded.
  - Locks with audible positive “click”
  - Assures 500 matings and unmatings

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration resistance:	Per MIL-STD202 method 204
Thermal shock:	Per MIL-STD202 method 207
Corrosion:	Salt spray per MIL-STD 202 method 101
Shielding effectiveness:	95 dB at 1 Mhz (see shielded connectors section)
Degree of protection per DIN 40050:	IP65 in mated condition. “H” version used with UTG-PG cable clamp

### Construction

Shells and accessories:	Aluminium alloy
Coupling ring:	Aluminium alloy
Tri-lock pins:	Stainless steel
Coupling spring:	Spring steel
Insert:	Glass-filled thermoplast UL94-V0
Finish:	Bright tin (standard)

### Contact accommodation

- “UTO” connectors accept Trim-Trio removable snap-lock contacts (see contacts section)
- Contacts to be ordered separately.

# MBG - Bantamate II 5000

## Plastic connector with quick mating feature

### Description

The BANTAMATE II cylindrical plastic connector has been designed for use in applications requiring a high number of mating cycles and rapid connections and disconnections. BANTAMATE II meets minimum durability requirements of **5000 mating/unmating cycles** by using a unique contact wiping system consisting of a lubricant saturated foam pad bonded to a spring loaded stripper plate within the receptacle or plug. On mating, the stripper plate is pushed deep into the connector wiping a thin film of lubricant onto the male contacts. A distinctive shape provides mating ease in blind or difficult to reach applications. Some typical applications would include test equipment, medical diagnostic equipment, or any of the hardware interconnections found in the modern electronic office.

### Features and benefits

- 5000 mating / unmating cycles
- Lubricated male contacts with spring actuated foam plate
- Quick and easy installation with latching mechanism
- Easy mating due to the positive polarisation, even in blind spots
- Unmated male contacts are protected by the spring actuated plate
- Available with 4, 12, 19, 30, and 46 contact positions.
- Applicable for front or rear panel mounting as well as free hanging applications
- UL recognised File number E31151
- CSA certified LR54977

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	Min. 5000 matings cycles
Vibration resistance:	5-50Hz, 0,5 dA; 8 hours axis
Thermal shock:	5 cycles -55°C to +105°C
Humidity:	10 days at 85% RH, +85°C

### Construction

Connector body and strain relief:	Glass filled thermoplast UL94-V0
	Colour: black
Locking latch and hook:	Stainless steel, passivated
Compression Spring:	Music wire, Nickel plated
Lubricating pad:	Polyurethane foam
Rivet:	Brass, Tin plated
Strain relief screws:	Steel, Cadmium plated

### Contact accommodation

- "MBG" connectors accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

# Rectangular

## Overview rectangular TRIM TRIO connectors

## Selection matrix Rectangular connectors

# MS-M - Hyfen rectangular

## High performance hyfen rectangular cable connectors

### Description

MSM rectangular connectors offers an extremely reliable, rugged, and versatile connection system .

They are a range of multiway connectors available in 8 sizes from 14 to 104 positions.

MS-M cable connectors can be offered with a full range of hardware and accessories. Guiding pins and sockets, turnable jackscrews, a variety of cable hoods, pin protection shrouds and discrimination pins make this connector range a truly versatile system.

### Features and benefits

- Connectors supplied pre-assembled except for panel mount versions.
- Available in 14-20-26-34-42-50-75 and 104 positions.
- **34 contact positions suitable for V.35 applications (see V.35 section)**
- Full range of accessories available including hoods, strain relief clamps, guide pins, jackscrews and pin protection shrouds.
- MS-M hyfen complies with NFC 93426 - HE 621-622 and MIL-C-28748 specifications.

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration resistance:	Per MIL-STD 202 method 204
Shock:	Per MIL-C-STD 202 method 207

### Construction

Connector Material :	Glass filled Phenolic
Flammability rating :	UL94-V0
Hoods:	Aluminium alloy gold chromate or anodized Polyamide 6.6 - black - UL94-V2
Cable clamps:	Stainless steel
Polarizing hardware:	Brass nickel plated
Shrouds:	Aluminium alloy gold chromate or anodized

### Contact accommodation

- "MS-M" Hyfen connectors accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

# MS-M - Hyfen rectangular

## Contact arrangement

The contact position identification letters or numbers shown in the above diagrams apply to MS-M plug and receptacle connectors. Dimensionally, corresponding types of plug and receptacle mouldings are the same and differ only in that the contact position lettering/numbering of the plug (MS-PM) is a mirror image of that of the receptacle (MS-RM). Note that pins and/or sockets can be used in either the plug or receptacle moulding.

Note: Contact identification is shown for wiring face of the receptacle and mating face at plug connector.

# V.35 - Interface connectors

## V.35 DTE/DCE Interface connectors

### Description

The Telecommunications Standardization Sector TSS V.35, formerly CCITT V.35 is the international standard termed "Data Transmission at 48 Kbps using 60-108 Khz Group-Band Circuits. It makes use of a 34 contact connection system specially designed to be used for DTE/DCE that interface to high speed digital carriers found in computer, modem and telecommunication industries.

Being part of the TRIM TRIO wide range of high reliable rectangular connectors, **MSO34** (boardmount connectors) and **MS34** (cable connectors) are in complete compliance to this specification.

To meet this specification, insulators have been manufactured with 34 contact positions which can be loaded with the international accepted N $\infty$  16 TRIM TRIO .0625" (1.6mm) diameter contacts.

The boardmount connectors (**MSO34**) are available in straight and right angle versions equipped with either solid machined or stamped and formed male / female contacts.

The cable connectors (**MS34**) can be offered with a full range of hardware and accessories. Guiding pins and sockets, turnable jackscrew system, different cable hoods with strain relief, pin protection shrouds and discrimination pins make this connector range as complete as possible.

### Features and benefits

- Complete compliance with International Standards of ISO 2593 for TTS V.35 (formerly CCITT V.35) interfacing.
- In compliance with NFC 93426 - HE621-622 and MIL-C-28748 specifications.
- UL recognised.
- UL94-V0 rated thermoplastic
- Boardmount connectors supplied pre-assembled with dipsolder contacts in either:
  - Male or female contacts.
  - Machined or stamped and formed contacts
  - Straight or right angle
- Stamped and formed contacts have selective tin plating on solder tails, thus eliminating extra flux operations.
- Selective loading possible on request.
- Right angle version equipped with true position location wafer.
- Hold-down feature available

### Intermateability

All the references mentioned are perfectly intermateable, provided that 1 mated pair exists out of a plug half and a receptacle half.

Mated pairs can be made for following applications:

- Cable to cable
- Cable to panel
- Cable to straight or right-angled boardmount

#### Technical data on MSO34 PC-Boardmount connectors

### Performance characteristics

Operating temperature:	-55°C to +125°C
Current rating:	7.5 Amp
Contact resistance:	≤ 3mΩ

Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.

### Plating table

Plating for solid machined contacts:

**No digit (std)** = Min. 0.4μ Gold all over, over Nickel.

T = 3 - 5μ Tin all over

Plating for Stamped and formed contacts :

**K9 (std)** = Min. 0.4μ Gold in contact area, 3 - 5μ SnPb on solder tail.

T = 3 - 5μ Tin all over

### Construction

Material : Glass-reinforced thermoplastic  
Flammability rating : UL94-V0  
Polarising hardware: Brass nickel plated  
Contacts: High conductive copper alloy

#### Technical data on MS34 Cable connectors

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration resistance:	Per MIL-STD 202 method 204
Shock:	Per MIL-STD 202 method 207

### Contact accommodation

- "MS" Cable connectors accept Trim Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately

### Construction

Connector body: Glass-reinforced Phenolic  
Flammability rating : UL94-V0  
Cable hoods: Aluminium alloy or Polyamide 6.6  
Cable clamps: Stainless steel  
Protection Shrouds: Aluminium alloy  
Polarising hardware: Brass nickel plated

# MSG - rectangular

## High performance Low profile rectangular MSG connectors

### Description

MSG Series connectors is a 59 position low profile, compact design rectangular I/O connector.

MSG has been developed for industrial control equipments which require a easy handling and high density connector. In addition to its panel mount version, a PCB mount version has been especially designed to fit 19 inch Euro-rack system.

### Features and benefits

- Connectors supplied pre-assembled.
- Available in 59 positions only.
- PCB mount version fully equipped with male contacts. Selective contact loading optional.
- Accessories : polarizing screws (receptacle)  
polarizing plate (plug)  
dust cap (plug)

### Performance characteristics

Operating temperature:	-55°C to +85°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Durability:	500 matings and unmatings.
Vibration:	Per JIS-C STD 0040
Salt Spray:	Per JIS-C STD 0023

### Construction

Connector Material :	Glass filled thermoplast
Flammability rating :	UL94-V0
Hoods, skirts :	Steel, nickel plated
Cable clamps:	Steel, nickel plated
Guiding hardware:	Stainless steel
Contacts receptacle :	Copper alloy (Au over Ni)

### Contact accommodation

- “MSG” Rectangular connectors accept Trim-Trio removable RM/RC contacts (see contact section)
- For the plug connector and the panel mount receptacle, contacts have to be ordered separately.

### How to order

Part number	Description
MSG59P-L11	Plug for cable up

## Qikmate panel and cable connectors

### Description

The versatile “SMS” Qikmate panel and cable connectors are a highly cost-effective system approach to solving the constant demand for more cost effective interconnection techniques.

It is a range of multiway connectors using N° 16 TRIM TRIO .0625” (1.6mm) diameter contacts and available in 10 contact arrangements from 2 to 36 positions. Having no additional hardware, Panel receptacle connectors snap and lock into panel cutouts and cable plugs quick connect and disconnect with positive retention locks.

Cable plug connectors also feature pin-protection skirts, positive polarisation and can be supplied with or without integrated strain relief hoods.

Cable receptacle connectors (only with integrated strain relief hoods) are developed to mate with cable plug connectors thus offering solutions for cable to cable applications.

### Features and benefits

- Available in 10 contact arrangements.
- Self mountable panel receptacle with positive housing retention.
- Cable plugs with retaining latches for positive locking.
- Cable plug has pin protection skirt to prevent damage of male contacts
- Positive polarization keys prevent mismatching.
- Cable plug and receptacle have integrated strain relief hood which can take a wide range of cables.
- Cable plug and receptacle have discrimination cavities in between contact cavities, thus offering discrimination without contact loss.

### Performance characteristics

Operating temperature: -55°C to +105°C  
 Insulation resistance: 5000 MΩ min.  
 Test potential: 2000 VAC  
 Durability: 500 matings and unmatings.

### Construction

Material : Polyamide 6.6  
 Flammability rating : UL94-V2

### Contact accommodation

- “SMS” Qikmate connectors accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

## Accessories for standard Qikmate connectors

### Pin protection shroud for panel mount receptacle (SMS--CSB1)

When pins are inserted into the panelmount receptacle half (SMS--R1) of the QIKMATE connector, an optional pin protection shroud can be installed.

The shroud is mounted at the same time as the receptacle by holding the shroud against the mating side of the panel with both cutouts lined up. The receptacle is then inserted in place, trapping the shroud between the receptacle and panel. The use of the pin protection shroud reduces the allowable thickness of the panel from 2.3 to 1.6 mm max.

### Strain relief hoods (SMS—H1)

Separate strain relief hoods are available for all standard plugs SMS—P1.

The hoods consist of identical halves that snap into position on the plug and are secured in place with the cable tie drawn tightly around the cable entry collar.

Catalog numbers designate a complete hood (2 halves) SMS—H1

The cable tie is not included (TF4D – TF5D)

Two three and four position hoods are single piece units

### Discrimination pins

For discrimination pins on both standard Qikmate and Qikmate Pin Headers cable and boardmount:  
See accessories section.

# SMS - Boardmount Qikmate

## Qikmate PC-boardmount connectors

### Description

These PC boardmount connectors enable QIKMATE and preassembled TRIM TRIO contacts to be PC board mounted, using conventional solder production techniques. They will then mate and latch with the standard QIKMATE plugs.

Straight boardmount QIKMATE is available in 10 insert arrangements from 2 to 36 positions.

Right-angled boardmount QIKMATE is available in 3, 6, 12 and 18 positions.

All boardmount connectors are supplied fully loaded with pin or socket contacts, either in solid machined or stamped and formed contacts.

Stamped and formed contact have selective tin plating on the solder tails, thus eliminating flux operations.

### Features and benefits

- Straight versions available in 10 contact arrangements from 2 to 36 positions
- Right-angled versions available in 3, 6, 12 and 18 positions.
- All versions are available with:
  - Pin or socket contacts
  - Stamped and formed or solid machined contacts.
- Some boardmount connectors have discrimination cavities in between contact cavities, thus offering discrimination without contact loss.

### Performance characteristics

Operating temperature:	-55°C to +125°C
Insulation resistance:	5000 MΩ min.
Test potential:	2000 VAC
Current rating:	5 Amp
Durability:	500 matings and unmatings.

### Construction

Connector body:	Glass filled thermoplast UL94-V0
Contacts:	High conductive copper alloy

### Plating table

Plating for solid machined contacts:  
**No digit (std)** = Min. 0.4μ Gold all over, over Nickel.  
 T = 3 - 5μ Tin all over  
 Plating for Stamped and formed contacts :  
**K9 (std)** = Min. 0.4μ Gold in contact area, 3 - 5μ Tin on solder tail.  
 T = 3 - 5μ Tin all over

### Intermateability

- "SMS" Qikmate boardmount connectors with preassembled TRIM TRIO boardmount contacts are intermateable only with the "SMS" Qikmate cable plug connectors equipped with TRIM TRIO crimp type removable snap-lock contacts (see contact section)

## Recommended PC-Board hole lay out for straight male and female boardmount connectors

## Recommended PC-Board hole lay out for right-angled male and female boardmount connectors

# SMS - Qikmate Pin Header

## Qikmate PC boardmount Pin Headers and plugs

### Description

Qikmate Pin Header, available in 3, 4, 6, 9 and 10 positions, provides the additional versatility of straight and right angle board mounting.

Offered as an alternative to stacked connectors, the in-line contact design of the pin header provides the user with significant PC board space savings.

The boardmount receptacle features positive polarization and a moulded on pin protection skirt and is supplied preassembled with straight or right angled:

- Solid machined or stamped and formed PC board pin contacts.
- Coax PC board pin contacts.

The socket cable plug features positive quick connect / disconnect latches and is designed to accept N° 16 TRIM TRIO .0625" (1.6mm) diameter socket contacts for maximum contact protection.

### Features and benefits

- Available in 3, 4, 6, 9 and 10 positions.
- In-line contact design, offering significant PC board space savings.
- Boardmount connectors available in straight and right-angled version preassembled with:
  - Solid machined or stamped and formed pin contacts.
  - Coax pin contacts.

### Construction

Connector body:

Glass filled thermoplast UL94-V0

Colour: Black

Contacts: High conductive copper alloy

### Performance characteristics

Operating

temperature: -55°C to +125°C

Insulation

resistance: 5000 MΩ min.

Test potential: 2000 VAC

Current rating: 5 AMP

Durability: 500 matings and unmatings.

### Intermateability

- "SMS" Socket plugs accept Trim-Trio removable snap-lock contacts (see contact section)
- Contacts to be ordered separately.

### Plating table

Plating for solid machined contacts:

**No digit (std)** = Min. 0.4μ Gold all over, over Nickel.

T = 3 - 5μ Tin all over

Plating for Stamped and formed contacts :

D28 = Min. 0.75μ Au over nickel.

D70 = Gold flash all over

TR29 = 1.2μ Pre-plated Tin all over.

Plating for coax contacts:

Z17 = Min. 0.75μ Au in contact area,

Flash on solder tail (inner)

Min 0.75μ Au in contact area,

Tin on solder tail (outer)

# Contacts - intro

## Overview TRIM TRIO contacts

## Selection matrix TRIM TRIO contacts

CONTACTS

## Current ratings for multi-contact connectors

### Choice of right connector - contact combination.

The choice of a Trim Trio connector in combination with a Trim Trio contact is essential and different for any application. There is considerable misunderstanding in the field on current carrying capabilities for the various contacts in the Trim Trio programme.

The intention of this part is to give guidance how to interpret the given current ratings in general and how to calculate them for particular applications.

The information given is based upon existing MIL specifications such as: MIL-C-26482, MIL-C-8384, MIL-T-7928, MIL-W-5086, MIL-W-5088, MIL-W-16878, etc. and in conjunction with long field practice.

### Current carrying capabilities

Trim Trio contacts are designed to carry a specific current, in accordance with the applicable specification.

This specification will be defined by following variables:

- **Connector size**

The more contacts in a connector, the less current per contact can be loaded.

- **Wire size** (see table 1)

The cross section will determine the internal resistance and temperature rise for a given current.

-Table 1 gives the current ratings for the various wire sizes commonly used with Trim Trio contacts.

- **Current rating** (see table 2)

The current load for a given application will generate heat.

- Table 2 gives the *maximum current carrying capacity* of most of the Trim Trio contacts, the *maximum operating current* and the *recommended continuous current*.

- **Ambient temperature**

The combination of the connector size, the wire size and the current rating will generate a temperature rise.

This temperature rise + a given ambient temperature may not exceed the maximum operating temperature of the connector material (see performance characteristics for each connector family).

Table 1 - Current carrying capabilities per wire size

AWG	wire size mm <sup>2</sup>	wire dia. mm	max.curr. carrying Amp.	max.operating curr. Amp.	recomm. cont. curr.
26	0.13	0.40	3	2	1
24	0.20	0.51	4.5	3	2
22	0.32	0.64	9	5	3
20	0.52	0.81	11	7.5	5
18	0.82	1.02	16	10	7.5
16	1.30	1.29	22	13	10
14	2.10	1.63	32	17	13

Table 2 - Current carrying capabilities per contact type

size	pin dia.	type	max. curr. carrying Amp.	max. operating curr. Amp.	recomm. cont. curr. Amp.
16	.062* 1.6 mm	RM / RC machined	22	13	10
		SM / SC 2 piece stamped	22	13	10
20	.040* 1.0 mm	SM-W / SC-W 2 piece stamped	11	7.5	5

- *Max. current carrying capacity*
- *Max. operating current*
- *Recommended continuous current*

#### What do these values mean in practice ?

- *Max current carrying capacity* of a contact is defined by the conducting section of the contact in its smallest area. The listed values are obtained from several tests in laboratories under room conditions (21°C). The contact is considered to be in free air.
- *Max operating current* is the current with which the contacts can be energized during a longer or shorter period, without deteriorating and depending on working conditions. These are dissipated heat, cooling provisions, ambient temperature, insulation material, etc.

- *Recommended continuous current* can be applied for all normal cases and working conditions. The values include a safety margin. However, there are restrictions in the application of the given values. The most important restriction is the used wire, its sectional area, insulation temperature range, as well as wires in bundles. Military specifications require that for a cable bundle of 15 conductors or more, the bundle shall not carry more than 20% of the total carrying capacity of the bundle. In smaller bundles, the allowable percentage of total current may be increased as the bundle approaches the single wire condition. This percentage of increase in total current carrying capacity of the bundle is 6% for each conductor less than 15 in a bundle.

# Contacts

From simple calculations, one can see that the closer the bundle approaches the single wire condition, the higher the allowable current per conductor becomes, to even such an extent, that it exceeds the recommended continuous current value. In that case, the recommended continuous value should have preference. In order to make this clear, we will give some typical examples.

• **Example 1**

Cable bundle, 48 conductors AWG20 (0.5mm<sup>2</sup>) used with circular TrimTrio connector with insert arrangement 24-48 and machined size 16 contacts RM/RC20.

- Total operating current capacity of bundle 48 x 7.5 A ( table I) = 360 A
- Total allowable capacity for bundles of more than 15 wires is 20% = 72 A
- When all conductors are energized equally, this gives:  
72 : 48 = 1.5 A per conductor

When for instance 5 conductors are energized to the recommended continuous current of 5 A (see table 1) resulting in 25 A consumption, the other conductors may not take more than  
72 - 25 = 47 A all together, or 1 A per conductor.

Any other combination can of course also be taken as long as the total capacity of 72 A is not exceeded and the recommended continuous current is respected.

Remark

Please note that contacts used are of the size 16 type with maximum operating current of 13 A (table 2).

The maximum operating current of the bundle is however restricted to 7.5 A per conductor due to the wire size of AWG20 (see table 1).

• **Example 2**

Cable bundle, 14 conductors AWG22 (0.32 mm<sup>2</sup>) used with rectangular Trim Trio connector with insert arrangement for 14 contacts, and machined size 16 contacts RM / RC20.

- Total operating current capacity of bundle 14 x 5 (table I) = 70 A
- Total allowable for wire bundle of 15 wires less 1 is 20% + 6% = 26% gives 18.2 A.
- All conductors energized equally, gives:  
18.2 : 14 = 1.3 A per conductor

This value is within the recommended rating of 3 A so that it can be applied. See also remark under example 1.

• **Example 3**

Cable bundle, 4 conductors AWG16 (1.3mm<sup>2</sup>) used with circular Trim Trio connector with insert arrangement 10-4 and stamped 2 piece contacts SM /SC.

- Total operating current capacity of bundle 4 x 13 A (table I) = 52 A
- Total allowable for wire bundle of 15 wires less 11 is 20% + 66% = 86% gives 44.7 A.
- All conductors energized equally, gives:  
44.7 : 4 = 11.2 A per conductor

Since the recommended continuous current is 10 A, the conductor should not carry more than 10 A individually.

As said before, the recommended ratings are valid for most common wiring systems and under normal working conditions. For extreme conditions, the given values should be lowered. The percentage of current reduction should be investigated from case to case.  
A rule-of thumb which can be used for such cases is:  
4 Amp. per mm<sup>2</sup> wire section  
It gives us for common used wire sizes the values listed in table 3.

**Table 3 - Recommended continuous current for extreme working conditions**

AWG	wire size mm <sup>2</sup>	recommended continuous current Amp.
26	0.13	0.5
24	0.20	0.8
22	0.32	1.3
20	0.52	2.0
18	0.82	3.3
16	1.30	5.2
14	2.10	8.4

CONTACTS

## Crimping instructions

### **The conductor and insulation crimp section**

Are designed to accommodate wire-conductor and insulation diameters, expressed in AWG (American Wire Gauge) or mm<sup>2</sup>.

For each wire gauge, a correct crimp requires a crimp height that offers the highest performance.

This performance is defined as the highest tensile strength force.

A good conductor crimp can be guaranteed if the tensile strength force is equal or higher as indicated on the graph below. E.g. a conductor of AWG20 (0.52 mm<sup>2</sup>) has a good crimp if the tensile strength is min 84N.

The tensile strength force is measured in Newtons and is the wire-to-contact connection that will withstand when a straight axial load is applied to the terminated wire. This is however a destructive test and is therefore inappropriate as a 100% inspection method.

An alternative method is to measure crimp height. The crimp height is measured at the conductor-crimp section.

• **If the dimension is too small**, then the conductor is over-crimped and the wire strands could be damaged, which results in a lower tensile strength force.

• **If the dimension is too large**, then the conductor is under-crimped and the wire strands will not be deformed enough to assure that the crimp will pass the tensile strength test.

In both cases, the application tooling's crimp height should be adjusted.

In order to have the right tooling's crimp height go and no-go gauges can be obtained and are defined in function of the type of crimp tooling and the wire gauge. For further information consult factory.

# RM/RC - Machined contacts

## Size 16 solid machined contacts for TRIM TRIO connectors

### Description

Size 16 RM/RC .063" (1.6mm) diameter contacts are precision solid machined crimp snap-in pin and sockets for heavy duty top performance requirements. Springs on both contacts are made of spring-tempered, heat-treated, beryllium copper.

The socket inner spring supplies high contact pressure to ensure low-resistance contact between pin and socket. The socket contact features closed entry to prevent probe damage. Crimp barrels have insulation grips for vibration support and are provided with a cable stop and inspection hole.

### Features and benefits

- Made from high conductive copper alloy with gold or tin over nickel plate finish.
- Heat-treated beryllium copper locking springs assure proper locking and alignment of contacts in the housing.
- Closed entry design on RC socket contact to prevent probe damage.
- Special "RCS" contacts with large lead-in design
- Contacts available in bulk packing

### Performance characteristics

Current rating:	13 Amp
Contact resistance:	≤ 3 mΩ

Contact retention in body:	110 N min.
Individual insertion force:	3.5 N max.
Individual withdrawal force:	0.55 N min.

### Construction

Contact body: High conductive copper alloy.

Outer spring: Tempered, heat-treated, beryllium copper.

Inner spring socket: Tempered, heat-treated, plated beryllium copper.

### Plating table

K (std)	= Min. 0.4 μ Gold all over, over Nickel
T	= 3 - 5 μ Tin all over, over Nickel
D28	= Min. 0.75 μ Gold over Nickel
T3	= 7,5μ - 12,5 μ Tin all over

### Connector accommodation

Any TRIM TRIO contact can be used in any contact position in any connector in the TRIM TRIO interconnection system.

Reeled contacts on plastic carrier (qty 2000 pcs)

RM/RC

# SM/SC-M Stamped contacts

## Size 16 stamped and formed contacts for TRIM TRIO connectors

### Description

Size 16 SM/SC .063" (1.6mm) diameter contacts are two piece strip formed crimp snap-in pin and sockets. These contacts consist of a crimp body made of high conductive copper alloy, and a stainless steel retaining spring featuring retention in the housing cavity and a closed entry socket to prevent probe damage. The contact with its open barrel is standard available on strip and packaged with 3000 pcs on reel. This reel packaging combined with semi or even full automatic crimp tooling provides the added advantage of a lower installed cost.

### Features and benefits

- Made from high conductive copper alloy with gold or tin over nickel plate finish.
- Two piece construction with dual purpose spring which serves for contact retention and protects the body against damage.
- Contacts available on reel (standard) and in bulk packing (100 pcs).
- Suitable for high volumes and lower installation cost.

### Performance characteristics

Current rating:	13 Amp
Contact resistance:	≤ 6 mΩ

Contact retention in body:	65 N min.
Individual insertion force:	3.5 N max.
Individual withdrawal force:	0.55 N min.

### Construction

Contact body: High conductive copper alloy.

Outer spring: Stainless steel

### Plating table

S6 = 0.75m Gold min. in contact area, flash on crimp barrel over Nickel.  
 D70 = Gold flash all over, over Nickel.  
 TK6 = Preplated Tin all over.

### Connector accommodation

Any TRIM TRIO contact can be used in any contact position in any connector in the TRIM TRIO interconnection system.

## Size 16 MULTIPIECE coaxial contacts for TRIM TRIO connectors

### Description

Size 16 RMDX/RCDX Multipiece .063" (1.6mm) diameter contacts are subminiature coaxial contacts to cover a wide range of subminiature coaxial and twisted pair cables.

They are suitable in applications where a mix of signal, power and coaxial cable terminations for low frequency, shielded signal and high frequency applications are needed.

The contact consist of an inner pin/socket and an outer male/female body.

The thermoplastic insulating bushing in the outer body is designed to accept and permanently retain the inner contact.

The outer ferrule hold the outer braid to the outer contact and act as an insulating support to ensure against bending and vibrating stresses.

The inner and the outer conductor are crimped individually, thereby enabling inspection of both critical crimp points.

### Features and benefits

- The inner and outer conductors are crimped individually
- The thermoplastic insulating bushing in the outer body is designed to accept and permanently retain the inner contact.
- Outer ferrule hold the outer braid to the outer contact and act as an insulating support to ensure against bending and vibration.

### Performance characteristics

Operating voltage between inner / outer contact:	230 VDC
Test potential between inner / outer contact	750 VAC 1 min.
Operating temperature:	-55°C t0 + 125°C
Contact retention in body:	65 N min.
Contact voltage drop a 1A:	25m V max.
Isolation at 30 MHZ:	140 db.

### Construction

Inner and outer contacts: High conductive copper alloy

Retaining spring: beryllium copper

Insulating bushing: Polyamide 6.6

### Plating table

Retaining spring: Nickel plated

Inner and outer contacts:

D28: 0.75 μ Gold min. over Nickel

### Connector accommodation

Any TRIM TRIO contact can be used in any contact position in any connector in the TRIM TRIO interconnection system.

## Size 16 monocrimp coaxial contacts for TRIM TRIO connectors

### Description

Size 16 RMDX/RCDX Monocrimp .063" (1.6mm) diameter contacts are one-piece monocrimp subminiature coaxial contacts to cover a wide range of subminiature coaxial and twisted pair cables. They provide cost effective solutions in applications where a mix of signal, power and coaxial cable terminations for low frequency, shielded signal and high frequency applications are needed. Monocrimp one piece coaxial contacts offer high reliability plus the economic advantage of a 95% reduction in installation time over conventional assembly methods currently in use.

### Features and benefits

- The monocrimp one-piece coaxial contacts offer high reliability plus the economic advantage of a 95% reduction in installation time over conventional assembly methods.
- This economy is achieved by simultaneously crimping of both the inner and outer conductor

### Performance characteristics

Operating voltage between inner / outer contact:	230 VDC
Test potential between inner / outer contact	450 VAC 1 min.
Operating temperature:	-55°C to +125°C
Contact retention in body:	65 N min.
Contact voltage drop a 1A:	30m V max.
Isolation at 30 MHZ:	140 db.

### Construction

Inner and outer contacts: High conductive copper alloy

Retaining spring: beryllium copper

Insulating bushing: Polyamide 6.6

### Plating table

Retaining spring: Nickel plated

Inner and outer contacts:

D28: 0.75µ Gold min. over Nickel

## Size 16 Fibre optic contacts for TRIM TRIO connectors

### Description

Size 16 (1.6mm) Fibre optic contacts series 8012 are optical contacts designed for the integration of optical links in all TRIM TRIO cable connectors.

The F.O. contacts are designed to accommodate 1000m plastic fibres with a cable diameter of 2.2 mm.

### Features and benefits

- Socket contact is spring loaded to avoid any air gap between the two optical faces.
- Low insertion loss is provided by high precision pieces.
- Single jumpers, multiway harness and active device housings can be supplied according customer requirement.

### Performance characteristics for plastic fibre (depends on supplier)

Temperatur range:	-20°C to + 70°C
Attenuation at 0.660 µm (at +20°C):	< 200 db/Km
Min radius:	25 mm
Tensile strength	5 daN
Weight:	5 daN/Km
Cable retention:	25 N
Typical insertion loss	1.5 dB at 650 nm

### Construction

Contact body: Arcap (rustproof)

Outer spring: Stainless steel

### Connector accommodation

Fibre optic contacts can be used in any contact position in any connector in the TRIM TRIO interconnection system.

- MS-M / MSGRectangular connectors
- SMS Qikmate
- G - Bantamate
- UT-Bantam
- UTG Metalok bantam
- UTP Full plastic bantam
- UTGS Shielded bantam

## How to order

### Contacts

Male contact:	8012P14J262
Female contact:	8012S14J262

### Tool kit

#### Crimping / polishing technic

The tool kit contains all necessary tools to terminate contacts for plastic fibre, such as

- Stripping plier
- Crimping plier
- Polishing plate and tool
- Miscellaneous

Part number tool kit: 80MS0004

### Separate tools

• Cutting tool	80WD0005
• Stripping plier	80WD0025
• Crimping plier	80WS0002
• Polishing plate	80WP0005
• Polishing tool	80WP0018
• 10 polishing discks 30 µm	80WP0019
• 10 polishing discks 9 µm	80WP0014
• Extraction tool	RX2025GE1

For other fibres consult factory.

## Discrimination keys for TRIM TRIO connectors

### Description

In applications where similar connectors are used next to each other, mismatching can be a reason for disturbances, system failure or even danger to operating personnel. To eliminate mismatching, all TRIM TRIO connectors can be equipped with discrimination keys, which offer unlimited possibilities for a "fool - proof" interconnection system.

When one of these discrimination keys is used, the TRIM TRIO connector will only mate with a connector which has a vacant contact or discrimination cavity at the corresponding position.

This system offers boundless opportunities for all applications which involve several identical TRIM TRIO connectors.

The material used is polyamide 6.6

### SMSPKE0

A dummy contact, which can be inserted into an empty contact cavity in any of the TRIM TRIO connectors.

### SMSPKB2

A tube, which can be fitted over a preassembled male contact in all TRIM TRIO male boardmount connectors MSO, SMS, MSG.

# Accessories

## SMSPK2V1

A pin, which can be inserted into a preassembled female contact in all TRIM TRIO female boardmount connectors MSO, SMS.

## SMSPK3

A pin, which can be inserted in the discrimination cavities of the SMS Qikmate cable and boardmount connectors. The discrimination cavities are in between of the contact cavities and offer the advantage that no contact cavities are lost due to discrimination.

As extraction tool, the RX2025GE1 without the "extraction tool tip" can be used.

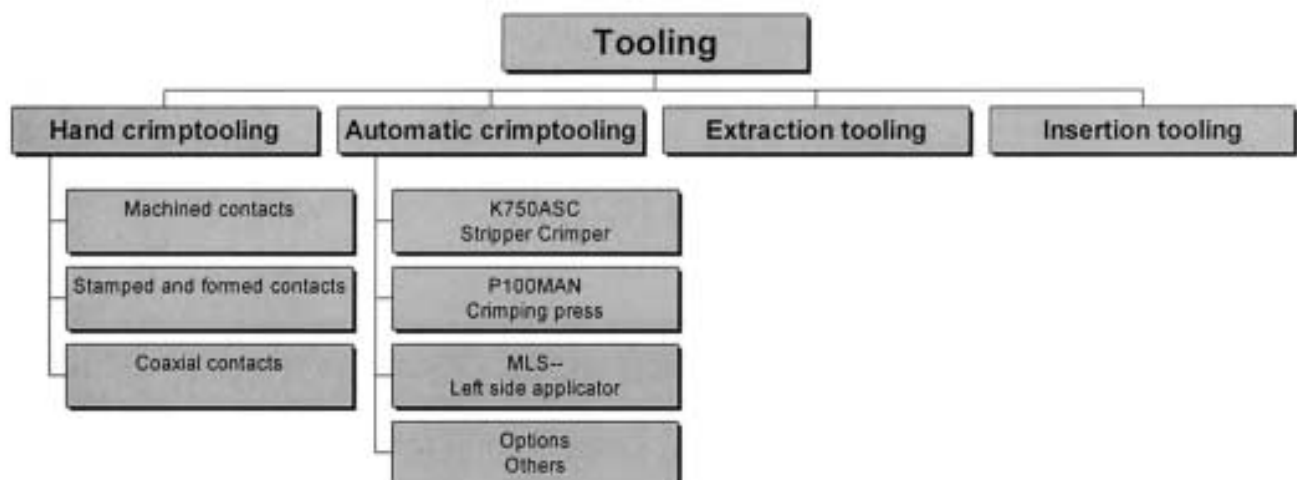

To unlock the discrimination pin, insert the extraction tool in the discrimination cavity at the rear side of the connector. Meanwhile, the pin can be extracted manually at the mating side.

## Overview TRIM TRIO tooling

## Selection matrix TRIM TRIO tooling

# Crimptooling

## Crimptooling for TRIM TRIO contacts

The TRIM TRIO connection system not only offers versatility in connectors but production versatility in tooling as well. All information needed on tooling ranges from simple handtools for small production, over semi-automatic to full automatic strip-and-crimp machines can be found on the hereafter paragraphs. All the TRIM TRIO tooling and this for machined, stamped and formed and coax contacts, is specially designed for this system to make reliable, trouble-free connections.

Weight: 425 gr.  
Length: 250 mm.

### M10S1 - for machined contacts

A robust, versatile, full cycling handtool which is fully qualified to the requirements of MIL-C-22520. Interchangeable 4-indent die sets are available for a wide range of machined contacts and gives a simultaneous crimp on both wire and insulation.

**This tool is suitable for application of RM/RC machined contacts and coaxial from the TRIM TRIO range.**

Weight: 400 gr.  
Length: 205 mm.

### Y16RCM - for machined contacts

A light weight, low cost crimping tool with fixed, 3-groove die set to crimp **Size 16 TRIM TRIO RM/RC loose piece machined contacts**.

The tool is ratchet controlled to guarantee a complete crimp cycle. Each crimping tool is supplied with a locator to guarantee a perfect crimp indent positioning.

Weight: 300 gr.  
Length: 170 mm.

### MH860 - for machined contacts

A light weight crimping tool Qualified to MIL-C-22520/7 that gives an 8 impression crimp with a precision cycle-controlled ratcheting mechanism. It features an 8 step crimp-depth selector knob and is designed to crimp **Size 16 TRIM TRIO RM/RC loose piece machined contacts**. The tool can be provided with different locators heads to crimp different contact types.

# Crimptooling

Weight: 800 gr.  
Length: 275 mm.

## M8ND - for machined and formed contacts

A robust full cycling hand ratchet tool which utilises interchangeable "N" die sets to crimp

**Size 16 TRIM TRIO RM/RC loose piece machined contacts.**  
**Size 16 TRIM TRIO SM-M/SC-M loose piece formed contacts.**

Weight: 400 gr.  
Length: 230 mm.

## Y14MTV - for formed contact

A light weight crimping tool with fixed 3-groove die set for AWG26 to 14 for: **Size 16 TRIM TRIO SM-M/SC-M loose piece formed contacts.**

Ratchet controlled to guarantee a complete crimp cycle.

Weight: 400 gr.  
Length: 205 mm

## Y16SCM2 - for formed contacts

A light weight crimping tool with fixed 3-groove die set for AWG26 to 16 for:

**Size 16 TRIM TRIO SM-M/SC-M loose piece formed contacts.**  
Ratchet controlled to guarantee a complete crimp cycle.  
Each crimping tool is supplied with a locator to guarantee a perfect crimp indent positioning.

Weight: 400 gr.  
Length: 205 mm.

## Y14SCM - for formed contacts

A light weight crimping tool with fixed 3-groove die set for AWG18 to 14 for:

**Size 16 TRIM TRIO SM-M/SC-M loose piece formed contacts.**  
Ratchet controlled to guarantee a complete crimp cycle.  
Each crimping tool is supplied with a locator to guarantee a perfect crimp indent positioning.

## K750ASC Stripper / Crimper machine for Trim Trio contacts.

### Description

The Strip Crimp 750 processes all banded contacts with cross sections from 0.05 – 4.0 mm<sup>2</sup>.

The press has a 40mm stroke and can be used with all UNI-C applicators as well as side-feed mini-style applicators.

Built with well proven precision mechanics and state of the art electronics, the machine is extremely user friendly. One example is the graphic display from which all stripping parameters can be set and called up digitally.

Up to 254 different wire programs can be stored in the memory.

Precision stripping and gas tight crimps guarantee maximum processing quality.

Ref.: K750ASC  
Power.: 0.37 kWatt  
Weight: 85 kg  
Dimensions: 350x460x485

### P100MAN (TT Press)

This electromechanical high speed full automatic crimping press is specially designed for mass production and is realised totally in assembled steel parts.

The available force consents the crimping of a wire section up to 2.5mm<sup>2</sup>.

The press has a 40mm stroke and can be used together with side feed mini-style applicators.

The noise level of the press is less than 70dB.

There is a safety mechanism that stops the press if the working speed is too high or the press does not complete its cycle. This protects the press or equipment mounted on board from damage.

Ref.: P100MAN  
Power.: 0.75 kWatt  
Weight: 41 kg  
Dimensions: 200x300x580

### MLS--- Left side miniapplicator

Miniapplicatorsn to crimp machined or stamped and formed TRIM TRIO contacts.

All the adjustments requested to make tool correctly functioning (crimp feeding pitch, crimp height...) can be simply made. Resolution of 0.03mm. Regulation range from 0 to 2.7 mm.

Ref.: See contact sections  
Stroke: 40 mm  
Weight: 4.5 kg  
Dimensions: 145x107x150

### Options

#### 1 - Quality assurance for crimping technology...

A crimping force sensor continuously checks the quality of each individual crimp and records it without impairing the processing speed. The sensor detects bad crimp connections, eliminating the high subsequent costs otherwise caused by them.

For ordering consult factory

# Crimptooling

## Extraction tooling

### RX2025GE1

A spring loaded extraction tool **for the full range of TRIM TRIO contacts**. This tool ensures that the contact locking louvres are fully retracted before any pressure is applied to extract a contact.

### RX2025GE2

A low cost spring loaded extraction tool for the full range of **TRIM TRIO contacts**.

### RX16D11D1

A spring loaded extraction tool **for the full range of TRIM TRIO contacts**. This tool ensures that the contact locking louvres are fully retracted before any pressure is applied to extract a contact. It is especially suitable for applications where the integrity of the assemblies are of the utmost importance.

## How to extract a contact out of its cavity?

Slide the extraction tip over contact from mating side till the locking spring from the contact is depressed.  
Push on handle to push out the contact with the spring loaded inner plunger.

## Insertion tooling

### RTM205

This tool is especially designed to ease insertion of **any TRIM TRIO contact** crimped on very flexible or small wire sizes. Simply position the insertion tool so that the tip of the tool bears against the back of the wire barrel, retaining the wire with thumb in the groove of the tool. Push the contact slowly into the connector until it snaps into position.

## TRIM TRIO

### Special connectors :

- Mixed power / signal
- VDE versions
- Boardmount versions
- Drawer connectors
- High temperatures
- Special applications
- Customised connectors

### Description

Special connectors are connectors to meet application-specific requirements. Based upon design-in projects, this range of special connectors is an extension of the long established and popular TRIM TRIO connector series shown in this catalog, but with the advantage of offering a number of additional features.

### Features and benefits

- TRIM TRIO connectors suitable for mixed power / signal application.
- TRIM TRIO connectors with preloaded stamped and formed contacts for boardmount application
- TRIM TRIO connectors for drawer applications and high temperature.
- Design-in flexibility of TRIM TRIO

The next page lists some of the Special TRIM TRIO connector configurations.

It is intended to give you a general idea of our design capabilities.

As the creation of Special TRIM TRIO connectors is an ongoing process, we advise you to contact our nearest FCI sales office if you have specific connector needs.

Our design flexibility is virtually unlimited, so we are always willing to consider any customised design. Separate data sheets with more detailed technical info of the listed TRIM TRIO Specials are available.

# Specials - TRIM TRIO

- UTG 24-7 mixed power with 7 power and 2 std. Trim Trio contacts – up to 44 Amps

- UTG 12-3 with 3 power contacts up to 26 Amps

- UTG 24-11 with 4 power and 7 standard Trim Trio contacts – up to 44 Amps

- UTG 14-8 with 4 power and 4 standard Trim Trio contacts – up to 26 Amps

- SMS12 with 8 power and 4 standard Trim Trio contacts - Up to 26 Amps

- Power crimp contacts  
– dia 2,4 - up to 26 Amps  
– dia 3,6 - up to 44 Amps

- MS75 with die cast hood and integrated shroud, for standard Trim Trio contacts

- QIKRACK Modular drawer connector  
For standard and RCS Trim Trio contacts
