# 1.3.1. Temperature

### 1.3.1.1 Operating

The IDE 4000 operates without degradation at a pressure of 1 atm over the following ambient temperature range:

- Commercial temperature version: 0°C to +70°C : for IDE 4000 2.5" and 1.8"
- Extended temperature version: -40°C to +85°C :for IDE 4000 2.5"

The maximum temperature change rate shall not exceed 5°C per minute.

### 1.3.1.2 Non-Operating

The IDE 4000 commercial temperature version meets the performance requirements specified in this document after having been tested via exposure to a nominal ambient temperature of  $-55^{\circ}$ C for not less than 3 days, and  $+95^{\circ}$ C for a period of not less than 6 hours.

The maximum temperature change rate shall not exceed 5°C per minute.

### 1.3.1.3 Airflow Requirements

General airflow guideline: 3-5 cu.feet/min.

### 1.3.2. Altitude

The IDE 4000 sustains full operation at altitudes ranging from sea level to 80,000 feet above sea level. It is also capable of full operation during air transportation via non-pressurized flights at altitudes greater than 80,000 feet above sea level.

### 1.3.3. Relative Humidity

The IDE 4000 withstands conditions of 8% to 95% non-condensing relative humidity (operation and non-operation).

#### 1.3.4. Shock

The IDE 4000 sustains full operation after being subjected to 1000 G shock testing in the vertical axis.

### 1.3.5. Vibration
