

## LM2724A

# High Speed 3A Synchronous MOSFET Driver

### General Description

The LM2724A is a dual N-channel MOSFET driver which can drive both the top and bottom MOSFETs in a push-pull structure simultaneously. The LM2724A takes a logic input and splits it into two complimentary signals with a typical 20ns dead time in between. The built-in cross-conduction protection circuitry prevents the top and bottom MOSFETs from turning on simultaneously. With a bias voltage of 5V, the peak sourcing and sinking current for each driver of the LM2724A is about 3A. Input UVLO (Under-Voltage-Lock-Out) ensures that all the driver outputs stay low until the supply rail exceeds the power-on threshold during system power on, or after the supply rail drops below power-on threshold by a specified hysteresis during system power down. The cross-conduction protection circuitry detects both driver outputs and will not turn on a driver until the other driver output is low. The top gate voltage needed by the top MOSFET is obtained through an external boot-strap structure. When not switching, the LM2724A only draws up to

195µA from the 5V rail. The synchronization operation of the bottom MOSFET can be disabled by pulling the SYNC pin to ground.

### Features

- Shoot-through protection
- Input Under-Voltage-Lock-Out
- 3A peak driving current
- 195µA quiescent current
- 28V input voltage in buck configuration
- SO-8 and LLP packages

### Applications

- High Current DC/DC Power Supplies
- High Input Voltage Switching Regulators
- Fast Transient Microprocessors
- Notebook Computers

### Typical Application

20073501

## Connection Diagram

## Ordering Information

Order Number	Size	NSC Package Drawing	Supplied As
LM2724AM	SO-8	M08A	95 Units/Rail
LM2724AMX			2500 Units/Reel
LM2724ALD	LDC08A	LDC08A	1000 Units/Rail
LM2724ALDX			4500 Units/Reel

## Pin Descriptions

Pin	Name	Function
1	SW	Top driver return. Should be connected to the common node of top and bottom FETs
2	HG	Top gate drive output. Should be connected to the top FET gate.
3	BOOT	Bootstrap. Accepts a bootstrap voltage for powering the high-side driver
4	IN	Accepts a logic control signal
5	SYNC	Bottom gate enable
6	V <sub>CC</sub>	Connect to +5V supply
7	LG	Bottom gate drive output. Should be connected to the bottom FET gate.
8	GND	Ground

$I_{leak\_SYNC}$	SYNC Pin Leakage Current	SYNC = 5V, Sink Current			<b>2</b>	$\mu\text{A}$
		SYNC = 0V, Source Current			<b>10</b>	$\mu\text{A}$

## Electrical Characteristics

### LM2724A (Continued)

$V_{CC} = BOOT = SYNC = 5V$ ,  $SW = GND = 0V$ , unless otherwise specified. Typicals and limits appearing in plain type apply for  $T_A = T_J = +25^\circ C$ . Limits appearing in **boldface** type apply over the entire operating temperature range.

Symbol	Parameter	Condition	Min	Typ	Max	Units
$I_{leak\_IN}$	IN Pin Leakage Current	IN = 0V, Source Current			<b>2</b>	$\mu A$
		IN = 5V, Sink Current			<b>10</b>	
$t_{on\_min1}$	Minimum Positive Pulse Width at IN Pin (Note 5)			160		ns
$t_{on\_min2}$	Minimum Positive Pulse Width at IN Pin for HG to Respond (Note 6)			45		
$t_{on\_min3}$	Minimum Positive Pulse Width at IN Pin for LG to Respond (Note 7)			10		
$t_{off\_min1}$	Minimum Negative Pulse Width at IN Pin for LG to Respond (Note 8)			40		
$t_{off\_min2}$	Minimum Negative Pulse Width at IN Pin for HG to Respond (Note 9)			5		
$V_{IH\_IN}$	IN High Level Input Voltage	When IN pin goes high from 0V	<b>55%</b>			$V_{CC}$
$V_{IL\_IN}$	IN Low Level Input Voltage	When IN pin goes low from 5V			<b>25%</b>	

**Note 1: Absolute Maximum Ratings** are limits beyond which damage to the device may occur. **Operating ratings** are conditions under which the device operates correctly. The guaranteed specifications apply only for the listed test conditions. Some performance characteristics may degrade when the part is not operated under listed conditions.

**Note 2:** If BOOT voltage exceeds this value, the ESD structure will degrade.

**Note 3:** Maximum allowable power dissipation is a function of the maximum junction temperature,  $T_{JMAX}$ , the junction-to-ambient thermal resistance,  $\theta_{JA}$ , and the ambient temperature,  $T_A$ . The maximum allowable power dissipation at any ambient temperature is calculated using:  $P_{MAX} = (T_{JMAX} - T_A) / \theta_{JA}$ . The junction-to-ambient thermal resistance,  $\theta_{JA}$ , for LM2724A is  $172^\circ C/W$ . For a  $T_{JMAX}$  of  $150^\circ C$  and  $T_A$  of  $25^\circ C$ , the maximum allowable power dissipation is 0.7W. The  $\theta_{JA}$ , for LM2724A LLP package is  $39^\circ C/W$ . For a  $T_{JMAX}$  of  $150^\circ C$  and  $T_A$  of  $25^\circ C$ , the maximum allowable power dissipation is 3.2W.

**Note 4:** ESD machine model susceptibility is 200V.

**Note 5:** If the positive pulse width at IN pin is below this value but above  $t_{on\_min2}$ , the pulse is internally stretched to  $t_{on\_min1}$ , so the HG width will be a constant value.

**Note 6:** If the positive pulse width at IN pin is below this value but above  $t_{on\_min3}$ , then HG stops responding while LG still responds to the pulse.

**Note 7:** If the positive pulse width at IN pin is below this value, the pulse will be completely ignored. Neither HG or LG will respond to it.

**Note 8:** If the negative pulse width at IN pin is below this value but above  $t_{off\_min2}$ , then LG stops responding while HG still responds.

**Note 9:** If the negative pulse width at IN pin is below this value, the pulse will be completely ignored. Neither HG or LG will respond to it.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
