

FLC01-200x

Application Specific Discretes A.S.D.[™]

FIRE LIGHTER CIRCUIT

FEATURES

- Dedicated thyristor structure for capacitance discharge ignition operation
- High pulse current capability
190A @ $t_p = 10\mu s$
- Fast turn-on operation
- Designed for high ambient temperature (up to 120°C)

BENEFITS

- Space saving thanks to monolithic function integration
- High reliability with planar technology

DESCRIPTION

The FLC01 series has been especially developed for capacitance discharge operation. The main applications are gas lighters or ignitors such as cookers / gas boilers / gas hobs...

Based on ST's ASD[™] technology, it provides a fully integrated function, with high performance and reliability levels, adapted to severe and hot temperature environment.

Th: Thyristor for switching operation.

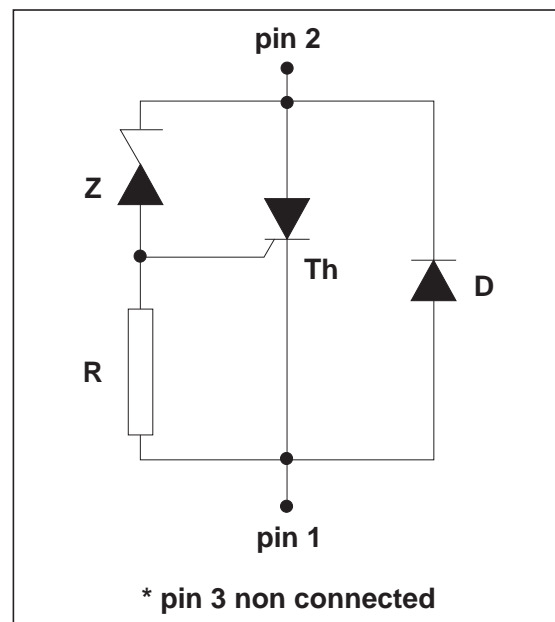

Z: Zener diode to set the threshold voltage.

D: Diode for reverse conduction.

R: 2 kΩ resistor.

FUNCTIONAL DIAGRAM

FLC01-200x

ABSOLUTE RATINGS (limiting values)

Symbol	Parameter	Value	Unit
I_{TRM}	Repetitive surge peak on state current for thyristor $-30^{\circ}\text{C} \leq T_{amb} \leq 120^{\circ}\text{C}$	190	A
I_{FRM}	Repetitive surge peak on state current for diode $-30^{\circ}\text{C} \leq T_{amb} \leq 120^{\circ}\text{C}$		
di/dt	Critical rate of rise time on state current $-30^{\circ}\text{C} \leq T_{amb} \leq 120^{\circ}\text{C}$	120	A/ μs
T_{stg} T_j	Storage junction temperature range Maximum junction temperature	- 40 to + 150 + 125	$^{\circ}\text{C}$
T_{oper}	Operating temperature range	-30 + 120	$^{\circ}\text{C}$
T_L	Maximum lead temperature for soldering during 10s	260	$^{\circ}\text{C}$

Note 1 : Test current waveform

THERMAL RESISTANCE

Symbol	Parameter	Value	Unit
$R_{th(j-a)}$	Thermal resistance junction to ambient	100	$^{\circ}\text{C}/\text{W}$

ORDERING INFORMATION

ELECTRICAL CHARACTERISTICS

Symbol	Parameters
V_{RM}	Stand-off voltage
V_{BO}	Breakover voltage
V_T	On-state voltage
V_F	Diode forward voltage drop
I_{BO}	Breakover current
I_{RM}	Leakage current
α_T	Temperature coefficient for V_{BO}

DIODE (D) PARAMETER

Symbol	Test Conditions				Value	Unit
V_F	$I_F = 2A$	$t_p \leq 500\mu s$	$T_j = 25^\circ C$	Max.	1.7	V

THYRISTOR (Th) and ZENER (Z) PARAMETERS

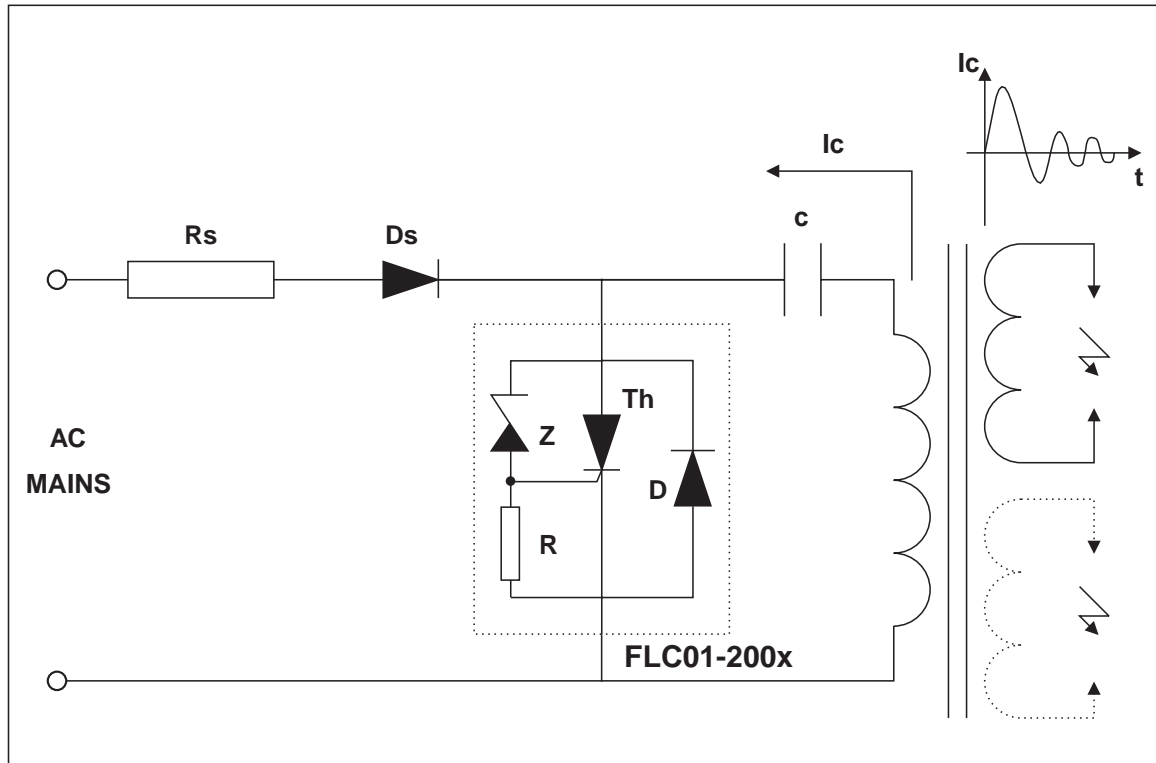

Symbol	Test conditions	Min.	Typ.	Max.	Unit	
I_{RM}	$V_{RM} = 200 V$	$T_j = 25^\circ C$		1	μA	
		$T_j = 125^\circ C$		10	μA	
V_{BO}	at I_{BO}	$T_j = 25^\circ C$	206	220	233	V
I_{BO}	at V_{BO}	$T_j = 25^\circ C$		0.5		mA
V_T	$I_T = 2A$ $t_p \leq 500\mu s$	$T_j = 25^\circ C$		1.7		V
α_T			0.27			$V/^\circ C$

FLC01-200x

Fig. 2: BASIC APPLICATION

The applications of the lighter using the capacitance discharge topology operate in 2 phases :

PHASE 1

The energy coming from the mains is stored into the capacitor C. For that, the AC voltage is rectified by the diode Ds.

PHASE 2

At the end of the phase 1, the voltage across the capacitor C reaches the avalanche threshold of the zener. Then a current flows through the gate of the thyristor Th which fires.

The firing of the thyristor causes an alternating current to flow through the capacitor C.

The positive parts of this current flow through C, Th and the primary of the HV transformer.

The negative parts of the current flow through C, D and the primary of the HV transformer.

RS RESISTOR CALCULATION

The Rs resistor allows, in addition with the capacitor C, the spark frequency to be adjusted and the current from the mains to be limited. Its value shall allow the thyristor Th to fire even in the worst case. In this case the system must fire with the lower RMS mains voltage value while the breakdown voltage and current of the FLC are at the maximum.

The maximum Rs value is equal to :

$$R_{s \max} = \frac{(V_{AC \min} \cdot \sqrt{2}) - [V_{BO \max} \cdot (1 + \alpha T \cdot (T_{amb} - 25))]}{k \cdot I_{BO}^*}$$

* : see fig 1

Fig. 3: Spark frequency versus R_s and C

The couple R_s/C can be chosen with the previous curve. Keep in mind the R_s maximum limit for which the system would not work when the AC

mains is minimum. The next curve shows the behavior with $R_s=15k\Omega$ and $C=1\mu F$.

Fig. 4: Voltage across the capacitance with $R_s = 15k\Omega$, $C = 1\mu F$ and $V_{BO} = 225V$.

FLC01-200x

PEAK CURRENT LIMIT

This component is designed to withstand $I_{TRM} = 190A$ for a pulse duration of $10\mu s$ for an

ambient temperature of $120^{\circ}C$ in repetitive surge. The curve of peak current versus the pulse duration allows us to verify if the application is within the FLC operating limit.

Fig. 5: Peak current limit

POWER LOSSES (For $10\mu s$, see note 1)

To evaluate the power losses, please use the following equations :

$$\text{For the thyristor : } P = 1.18 \times I_{T(AV)} + 0.035 I_{T(RMS)}^2$$

$$\text{For the diode : } P = 0.67 \times I_{F(AV)} + 0.106 I_{F(RMS)}^2$$
