## **DISTINCTIVE CHARACTERISTICS**

### Enhanced LED Illumination with:

- Broad and even light distribution
- Consistent bright backlighting
- Lower energy consumption

Programmable to display graphics, alphanumeric characters and animated sequences.

SMARTDISPLAY can be used alone or in conjunction with electromechanical switches.

Integrated liquid crystal display provides wide viewing angle with high contrast and clarity.

Viewing area 13.9mm x 10.6mm (horizontal x vertical) at 36 x 24 pixels.

Epoxy sealed terminals prevent entry of solder flux and other contaminants.

Optional accessories available to enhance panel design and simplify production process.

Built-in red/green LED backlighting enhances display and enables multifunctional uses.

### **PRECAUTIONS FOR HANDLING & STORAGE**

- 1. The VLC voltage should not be applied before logic voltage. If VLC voltage is present before logic voltage, it may cause the driver logic to freeze and damage the LCD, and the driver logic itself may become damaged.
- 2. The IS Series devices are electrostatic sensitive.
- 3. Recommended soldering time and temperature limits are 5 seconds maximum @ 270°C maximum.
- 4. Do not exceed 60°C at the LCD level.
- 5. The IS series devices are not process sealed.
- 6. If the LCD is accidentally broken, avoid contact with the liquid and wash off any liquid spills to the skin or clothing.
- 7. Clean cap surface with dry cloth. If further cleaning is needed, wipe with dampened cloth using neutral cleanser and dry with clean cloth. Do not use organic solvent.

#### Storage

- 1. Store away from direct sunlight.
- 2. Keep away from static electricity.
- 3. Avoid extreme temperatures, high humidity, gaseous substances, and all forms of chemical contamination.

#### **Characteristics of Display**

Display Operation Mode	STN positive	
Display Condition	Transflective with built-in LED backlight	
Viewing Angle	Adjustable	
Driving Method	1/24 duty. 1/5 bias (built-in driving circuit)	
Viewing Area	13.9mm x 10.6mm (horizontal x vertical)	
Pixel Format	36 x 24 dots (horizonal x vertical)	
Pixel Size	0.32mm x 0.32mm (horizontal x vertical)	
Operating Temperature Range	0°C through 40°C (32°F through 104°F)	
Storage Temperature Range	–10°C through 60°C (14°F through 140°F)	
Backlight LED	Red/Green	

Red/Green Bicolor LED with Yellow LCD Mode

## **BLOCK DIAGRAM & PIN CONFIGURATIONS**

<u>Pin No</u>	<u>. Symbol</u>	Name	Function
$\bigcirc$	$V_{LC}$	Power	Power source for LCD drive
2	BL-LED ()	Terminal of Backlight LED	Cathode: green
3	GND	Ground	
4	$V_{\text{dd}}$	Power	Power source for logic circuit
5	Din	Data Input	Display serial data bit. Note: to map the display data, because of the difference between the number of internal shift register data (40) and the single line of LCD pixels (36), the first four bits of data shifted will be dummy bits.
6	SCP	Serial Clock Pulse	Clock used by 40-bit internal shift register of the switch, shifting the display data bit presented at Din at falling edge.
7	LP	Latch Pulse	Line data latch pulse will latch content of internal 40-bit shift register at falling edge for one line of display. LP will also increment the display line by one.
8	BL-LED ()	Terminal of Backlight LED	Cathode: red
9	FLM	First Line Marker	The marking signal for the first line data of LCD display. The first line of LCD will be selected by the falling edge of LP signal during the high level (FLM).
10	BL-LED (+)	Terminal of Backlight LED	Anode for common
1	Dout	Data Output	Display serial output. Can be used to connect to Din of the next SMARTDISPLAY. As a result, many SMARTDISPLAYS can be controlled with one clock and data signal.
(12)	NC	None	No connection
