3. Optical Specifications

3.1.LCD Driving Voltage

| Parameter | Symbol | Conditions | Min. | Тур. | Max. | Units |
|---------------------|-----------|------------|------|------|------|-------|
| Recommended | | Ta= 0°C | - | _ | 24.3 | V |
| LCD Driving Voltage | VDD-VCONT | Ta=25°C | 19.1 | 20.5 | 21.9 | V |
| Note 1 | | Ta=50°C | 17.3 | | | V |

Note 1 : Voltage (Applied actual waveform to LCD Module) for the best contrast. The range of minimum and maximum shows tolerance of the operating voltage. The specified contrast ratio and response time are not guaranteed over the entire range.

3.2.Optical Characteristics

Ta=25°C, 1/128 Duty, 1/12.3 Bias, V_D=19.9V (Note 4), $\theta = 0^{\circ}$, $\phi = -^{\circ}$

| Pa | rameter | Symbol | Conditions | Min. | Тур. | Max. | Units |
|--------------|--------------|--------|--|----------|-------|------|-------|
| Contrast Rat | io Note 1 | CR | $\theta = 0^{\circ}, \phi = -^{\circ}$ | - | 6 | — | |
| Viewing An | gle | | | Shown is | n 3.3 | | |
| Response | Rise Note 2 | Ton | — | _ | 180 | 270 | ms |
| Time | Decay Note 3 | TOFF | _ | _ | 240 | 360 | ms |

Note 1 : Contrast ratio is definded as follows.

 $CR = L_{OFF} / L_{ON}$

LON: Luminance of the ON segments

LOFF : Luminance of the OFF segments

- Note 2 : The time that the luminance level reaches 90% of the saturation level from 0% when ON signal is applied.
- Note 3 : The time that the luminance level reaches 10% of the saturation level from 100% when OFF signal is applied.

Note 4 : Definition of Driving Voltage V_D

VD=VDD-VCONT-VBE

Assuming that the typical driving waveforms shown below are applied to the LCD Panel at 1/A Duty - 1/B Bias (A : Duty Number, B : Bias Number). Driving voltage V_D is definded as follows.

 $V_D = (Vth1+Vth2) / 2$

- Vth1: The voltage V_{O-P} that should provide 50% of the saturation level in the luminance at the segment which the ON signal is applied to.
- $\label{eq:Vth2} Vth2: The voltage V_{O-P} \mbox{ that should provide 50\% of the saturation level in the luminance at the segment which the OFF signal is applied to.$

4.<u>I/O Terminal</u>

4.1.Pin Assignment

| No. | Symbol | Level | Function |
|-----|------------------------|-------|---|
| 1 | FG | — | Frame Ground |
| 2 | Vss | _ | Power Supply (0V, GND) |
| 3 | V _{DD} | — | Power Supply for Logic |
| 4 | VCONT | — | Voltage Level for LCD Contrast Adjustment |
| 5 | VEE | — | Power Supply for LCD Drive |
| 6 | WR | H / L | Write Signal L : Active |
| 7 | $\overline{\text{RD}}$ | H / L | Read Signal L: Active |
| 8 | \overline{CE} | H / L | Chip Enable Signal L : Active |
| 9 | C/\overline{D} | H/L | Write Mode H: Command Write L: Data Write |
| | | | Read Mode H: Status Read L: Data Read |
| 10 | HALT | H / L | Clock Operating Stop Signal L : Halt |
| 11 | RESET | H / L | Reset Signal L : Reset |
| 12 | D0 | H / L | Display Data |
| 13 | D1 | H / L | Display Data |
| 14 | D2 | H / L | Display Data |
| 15 | D3 | H / L | Display Data |
| 16 | D4 | H / L | Display Data |
| 17 | D5 | H / L | Display Data |
| 18 | D6 | H / L | Display Data |
| 19 | D7 | H / L | Display Data |
| 20 | NC | _ | Non-connection |
| 21 | EL | _ | Power Supply for EL |
| 22 | EL | _ | Power Supply for EL |

4.2.Example of Power Supply

It is recommended to apply a potentiometer for the contrast adjust due to the tolerance of the driving voltage and its temperature dependence.

5.<u>Test</u>

No change on display and in operation under the following test condition.

| No. | Parameter | Conditions | Notes |
|----------------------------------|--|---|-------------|
| 1 | High Temperature Operating | $50^{\circ}\text{C} \pm 2^{\circ}\text{C}$, 96hrs (operation state) | |

6. Appearance Standards

6.1.Inspection conditions

The LCD shall be inspected under 40W white fluorescent light.

The distance between the eyes and the sample shall be more than 30cm.

All directions for inspecting the sample should be within 45 $^{\circ}\,$ against perpendicular line.

6.2. Definition of applicable Zones

A Zone : Active display area

B Zone : Area from outside of "A Zone" to validity viewing area C Zone : Rest parts

A Zone + B Zone = Validity viewing area

10. Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

- 1) Liquid crystal display devices
- ① The liquid crystal display device panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
- ② The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.

2) Care of the liquid crystal display module against static electricity discharge.

- ① When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect work tables against the hazards of electrical shock.
- ② Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
- ③ Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- 3) When the LCD module alone must be stored for long periods of time:
- ① Protect the modules from high temperature and humidity.
- ② Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
- ③ Protect the modules from excessive external forces.
- 4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.
- 5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- 6) Conduc1tivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.
- 7) For models which use CFL:
- ① High voltage of 1000V or greater is applied to the CFL cable connector area. Care should be taken not to touch connection areas to avoid burns.
- 2 Protect CFL cables from rubbing against the unit and thus causing the wire jacket to become worn.
 3 The use of CFLs for extended periods of time at low temperatures will significantly shorten their service life.

DMF5001NYL-SEB (AD) No.2000-0061

8) For models which use touch panels:

①Do not stack up modules since they can be damaged by components on neighboring modules. ②Do not place heavy objects on top of the product. This could cause glass breakage.

- 9) For models which use COG,TAB,or COF:
 - ①The mechanical strength of the product is low since the IC chip faces out unprotected from the rear. Be sure to protect the rear of the IC chip from external forces.
 - ②Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.
- 10) Models which use flexible cable, heat seal, or TAB:

①In order to maintain reliability, do not touch or hold by the connector area.②Avoid any bending, pulling, or other excessive force, which can result in broken connections.

11. Warranty

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- ① We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- ② We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- ③ We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
