# 1.General Specifications

Operating Temp.	:	min20°C ~max. 70°C	
Storage Temp.	:	min30°C ~max. 80°C	
Dot Pixels	:	128 (W) × 64 (H) dots	
Dot Size	:	0.47 (W) × 0.47 (H) mm	
Dot Pitch	:	0.50 (W) × 0.50 (H) mm	
Viewing Area	:	69.0 (W) × 36.5 (H) mm	
Outline Dimensions	:	89.7 (W) × 49.8 $^{*}$ (H) × 11.8 (D) mm * Without Flat Cable and LED Cable	
Weight	:	41.2g max.	
LCD Type	:	NTD-22662 (F-STN / Black & White-mode / Transmissive)	
Viewing Angle	:	6:00	
Data Transfer	:	8-bit parallel data transfer Serial data transfer	
Backlight	:	LED Backlight / Yellow	
Additional Spec.	:	Vivid Color Display Specification (High Performance Color is Used)	
Drawing	:	Dimensional Outline UE-312339	
RoHS regulation	:	To our best knowledge, this product satisfies material requirement of RoHS regulation. Our company is doing the best efforts to obtain the equivalent certificate from our suppliers.

## 2.Electrical Specifications

#### 2.1. Absolute Maximum Ratings

		9-			Vss=0V
Parameter	Symbol	Conditions	Min.	Max.	Units
Supply Voltage (Logic)	Vdd-Vss	-	-0.3	7.0	V
Supply Voltage	Vss2	With Double *1	-7.0	+0.3	V
(Booster Circuit)		With Triple *1	-6.0	+0.3	
		With Quad *1	-4.5	+0.3	
Supply Voltage 1 (LCD Drive)	V5, Vout	*1	-18.0	+0.3	V
Supply Voltage 2	V1, V 2, V 3, V	*1	V5	+0.3	V
(LCD Drive)	4				
Input Voltage	Vin	-	-0.3	Vdd+0.3	V
Output Voltage	Vo	-	-0.3	Vdd+0.3	V

\*1 Relative to VDD.

The relation of  $VDD \ge V1 \ge V2 \ge V3 \ge V4 \ge V5 > VOUT$ ;  $VDD > VSS \ge VOUT$  must be maintained.

In case of inputting external LCD driving voltage, LCD drive voltage should start supplying toNJU6676 at the mean time of turning on VDD power supply or after turned on VDD.

In use of the voltage boost circuit, the condition that the supply voltage :  $18V \ge V_{DD}$ -VouT is necessary. Decoupling capacitor should be connected between VDD and VSS due to the stabilized operation for the voltage converter.

					Та	=25°C, \	Vss=0V

Note 1 :Contrast ratio is definded as follows. (CR = LON / LOFF)

LON : Luminance of the ON segments

LOFF: Luminance of the OFF segments

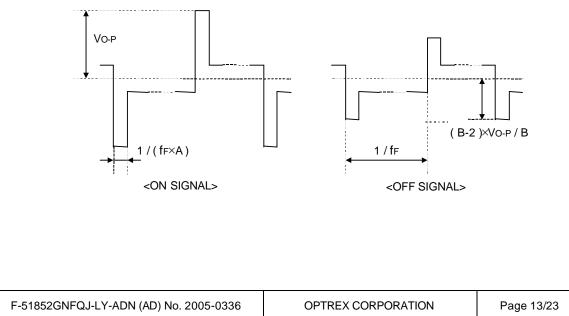

Measuring Spot : 3.0mm

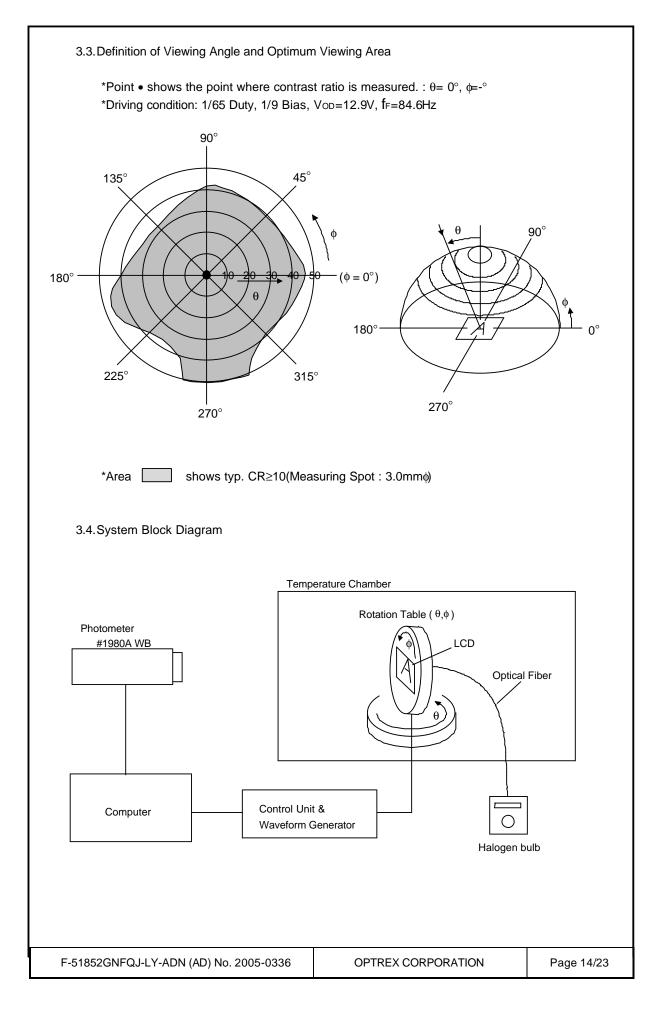

Note 2 :The time that the luminance level reaches 90% of the saturation level from 0% when ON signal is applied.

Note 3 :The time that the luminance level reaches 10% of the saturation level from 100% when OFF signal is applied.

Note 4 :Definition of Driving Voltage VoD

Assuming that the typical driving waveforms shown below are applied to the LCD Panel at 1/A Duty - 1/B Bias (A: Duty Number, B: Bias Number). Driving voltage VoD is definded as the voltage VO-P when the contrast ratio (CR=LON / LOFF) is at its maximum.

#### <u>5.Test</u>

No change on display and in operation under the following test condition.

Conditions: Unless otherwise specified, tests will be conducted under the following condition. Temperature: 20±5°C Humidity : 65±5%RH tests will be not conducted under functioning state.

No.	Parameter	Conditions	Notes
1	High Temperature Operating	70°C±2°C, 96hrs (operation state)	
2	Low Temperature Operating	-20°C±2°C, 96hrs (operation state)	1
3	High Temperature Storage	80°C±2°C, 96hrs	2
4	Low Temperature Storage	-30°C±2°C, 96hrs	1,2
5	Damp Proof Test	40°C±2°C,90~95%RH, 96hrs	1,2
6	Vibration Test	Total fixed amplitude : 1.5mm	3
		Vibration Frequency : 10~55Hz	
		One cycle 60 seconds to 3 directions of X, Y, Z for	
		each 15 minutes	
7	Shock Test	To be measured after dropping from 60cm high on	
		the concrete surface in packing state.	
		$ \begin{array}{c c} & & & \\ & & & & \\ & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & $	

Note 1 :No dew condensation to be observed.

Note 2 :The function test shall be conducted after 4 hours storage at the normal

Temperature and humidity after removed from the test chamber.

Note 3 :Vibration test will be conducted to the product itself without putting it in a container.

F-51852GNFQJ-LY-ADN (AD) No. 2005-0336	OPTREX CORPORATION	Page 17/23

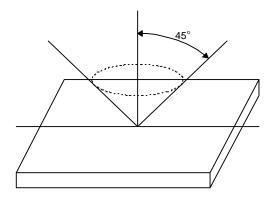

#### 6.1. Inspection conditions

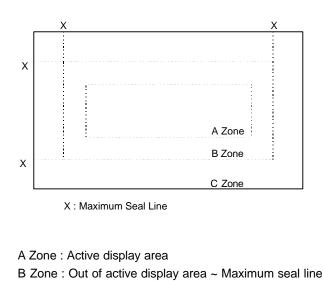

The LCD shall be inspected under 40W white fluorescent light.

The distance between the eyes and the sample shall be more than 30cm.

All directions for inspecting the sample should be within 45° against perpendicular line.

6.2. Definition of applicable Zones

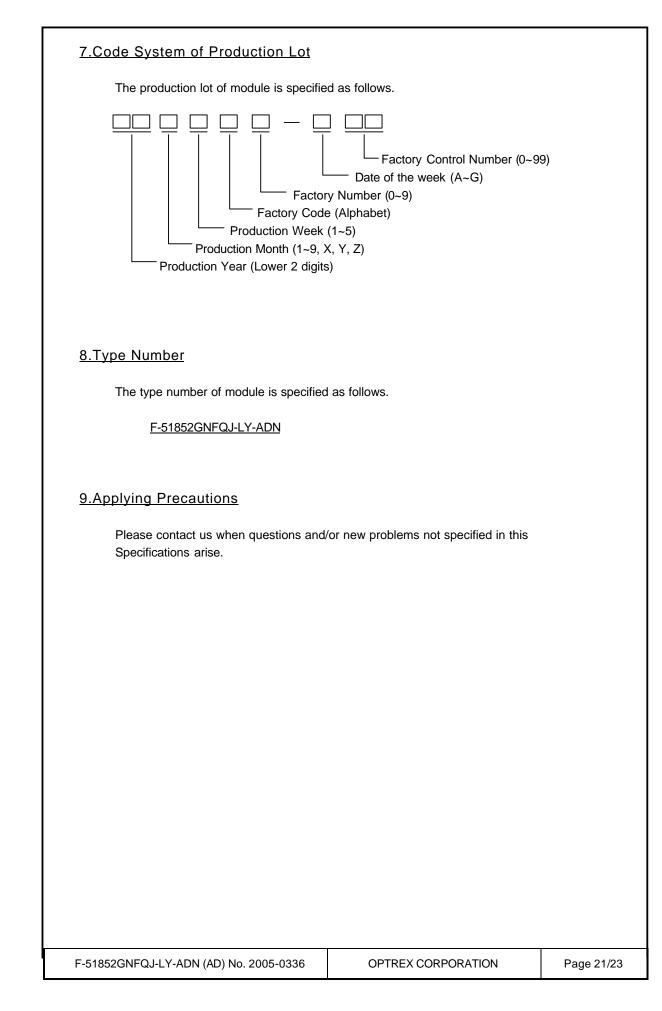

C Zone : Rest parts

A Zone + B Zone = Validity viewing area

### 10.Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

- 1) Liquid crystal display devices
- 1. The liquid crystal display device panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care.
- 2. The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.
- 2) Care of the liquid crystal display module against static electricity discharge.
- 1. When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect work tables against the hazards of electrical shock.
- 2. Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
- 3. Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- 3) When the LCD module alone must be stored for long periods of time:
- 1. Protect the modules from high temperature and humidity.
- 2. Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
- 3. Protect the modules from excessive external forces.
- 4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.
- 5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- 6) Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.
- 7) For models which use CFL:
- 1. High voltage of 1000V or greater is applied to the CFL cable connector area. Care should be taken not to touch connection areas to avoid burns.
- 2. Protect CFL cables from rubbing against the unit and thus causing the wire jacket to become worn.
- 3. The use of CFLs for extended periods of time at low temperatures will significantly shorten their service life.
- 8) For models which use touch panels:
- 1. Do not stack up modules since they can be damaged by components on neighboring modules.
- 2. Do not place heavy objects on top of the product. This could cause glass breakage.
- 9) For models which use COG, TAB, or COF:
- 1. The mechanical strength of the product is low since the IC chip faces out unprotected from the rear. Be sure to protect the rear of the IC chip from external forces.
- 2. Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.

F-51852GNFQJ-LY-ADN (AD) No. 2005-0336

OPTREX CORPORATION

10)Models which use flexible cable, heat seal, or TAB:

- 1. In order to maintain reliability, do not touch or hold by the connector area.
- 2. Avoid any bending, pulling, or other excessive force, which can result in broken connections.
- 11)In case of buffer material such as cushion / gasket is assembled into LCD module, it may have an adverse effect on connecting parts (LCD panel-TCP / HEAT SEAL / FPC / etc., PCB-TCP / HEAT SEAL / FPC etc., TCP-HEAT SEAL, TCP-FPC, HEAT SEAL-FPC, etc.,) depending on its materials.

Please check and evaluate these materials carefully before use.

12)In case of acrylic plate is attached to front side of LCD panel, cloudiness (very small cracks) can occur on acrylic plate, being influenced by some components generated from polarizer film..

Please check and evaluate those acrylic materials carefully before use.

#### 11.Warranty

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- 1. We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- 2. We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- 3. We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
- 4. When the product is in CFL models, CFL service life and brightness will vary According to the performance of the inverter used, leaks, etc. We cannot accept responsibility for product performance, reliability, or defect, which may arise.
- 5. We cannot accept responsibility for intellectual property of a third party, which may arise through the application of our product to your assembly with exception to those issues relating directly to the structure or method of manufacturing of our product.
- 6. Optrex will not be held responsible for any quality guarantee issue for defect products judged as Optrex-origin longer than 2 (two) years from Optrex production or 1(one) year from Optrex, Optrex America, Optrex Europe delivery which ever comes later.
