

# Fiber Optic Receiver

OPF520

## OPF520

- Low Cost plastic cap package
- Designed to self align in the bore of standard fiber optic receptacles
- Press fit simplifies installation
- Optimized for fiber optic applications using 50 to 200 micron fiber

The OPF520 fiber optic receiver is a high performance device packaged for data communications links. As such, it is designed to work with fiber core diameters from 50 $\mu$ m to 200 $\mu$ m and over a broad input power range. The construction contains a monolithic photo-IC comprised of a photodiode, biasing network, DC amplifier and an open collector output transistor. The output circuitry makes this device compatible with TTL and CMOS logic.

This receiver is designed to operate from a single 5V supply. It is essential that a bypass capacitor be connected from VCC to GND in order to ensure the best possible operation.

## Applications

- ◆ Industrial Ethernet equipment
- ◆ Copper-to-fiber media conversion
- ◆ Intra-system fiber optic links
- ◆ Video surveillance systems

### Absolute Maximum Ratings

Storage Temperature.....	-55° C to +115° C
Operating Temperature.....	-40° C to +85° C
Lead Soldering Temperature (for 10 seconds).....	260° C
Supply Voltage.....	-0.5 V to +7.0 V
Output Current.....	25 mA
Output Voltage.....	-0.5 V to +18.0 V
Open Collector Power Distribution.....	40mW
Fan Out (TTL).....	5 <sup>(1)</sup>
