Descriptions

Avago Technologies' ASMT-FJ10-ADH00 is a SMT (Surface Mount Technology) dome lamp uses an untinted, nondiffused lens to provide a high luminous intensity within a narrow radiation pattern. The device is made by encapsulating LED chip on axial lead frame to form molded epoxy lamp package with 6 bended leads for surfacing mounting.

This lamp type LED utilize Aluminum Indium Gallium Phosphide (AlInGaP) material technology. The AlInGaP material has a very high luminous efficiency, capable of producing high light output over a wide range of drive currents. The color available for this SMT Lamp package is 605nm Orange.

This narrow angle SMT lamp package is designed for applications that require long distance illumination and narrow beam pattern such as auxiliary flash for auto-focus function in digital still camera etc. In order to facilitate pick and place operation, this SMT Lamp is shipped in tape and reel, with 1000 units per reel. This package is compatible with Pb-free IR soldering process.

Eye Safety

These orange Surface Mount AF Lamp are use for camera application. The LEDs have lenses, which focus the beam at about 10mm from the front of the lens, from where the beam diverges relatively slowly. If the LEDs were placed in a product, they would create a Class 1 LED to IEC/EN 60825-1 (2001) under all conditions of operation & single fault failure. As long as no collimating optics are added to the optical path.

Device Selection Guide

Color	Part Number	min. I_v (cd)	Typ. I_v (cd)	Test Current (mA)	Dice Technology
Orange	ASMT-FJ10-ADH00	9	22	20	AllnGaP

Notes:

1. The luminous intensity I_v is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.
2. I_v Tolerance = $\pm 15\%$

Notes:

1. The dominant wavelength, λ_D , is derived from the CIE Chromaticity Diagram and represents the color of the device.
2. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
3. Radiant intensity, I_e in watts/steradian, may be calculated from the equation $I_e = I_v/\eta_v$, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.
