## Soldering & Handling

- 1. Cleaning
- Don't use unspecified chemical liquids to clean the SMD LED; the chemical could harm the SMD LED. When washing is necessary, please immerse the SMD LED in alcohol at normal room temperature for less than 1 minute and dry at normal room temperature for 15 minutes before use.
- The influence of ultrasonic cleaning on the SMD LED depending on factors such as ultrasonic power and the way SMD LED are mounted. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the SMD LED.
- 2. Moisture Proof Packing
- In order to prevent moisture absorption into SMD LED during the transportation and storage, SMD LED is packed in a moisture barrier bag. Desiccants and a humidity indicator are packed together with SMD LED as the secondary protection. The indication of humidity indicator card provides the information of humidity within SMD packing.
- 3. Storage
- Shelf life in original sealed bag at storage condition of <40°C and <90%RH is 12 months. Baking is required whenever shelf life is expired.
- Before openning the packaging , Please check whether bag leak air or not.
- After bag opening, the SMD LED must be stored under the condition < 30°C and < 60%RH. Under this condition, SMD LED must be used (subject to reflow) within 168 hours after bag opening, and re-baking is required when exceeding 168 hours.
- For baking, place SMD LED in oven at temperature 80°C±5°C and relative humidity <=10%RH, for 24 hours.
- Take out the material from packaging bag for re-bake. Do not open the door of oven frequently during the baking process.
- 4. Soldering
- Manual soldering by soldering iron
- The use of a soldering iron of less than 25W is recommended and the temperature of the iron must be kept at below 315°C, with soldering time within 2 seconds.
- The epoxy resin of SMD LED should not be in contact with tip of soldering iron.
- No mechanical stress should be exerted on the resin portion of SMD LED during soldering.
- Handling of SMD LED should be done when the package has been cooled down to below 40°C or less. This is to prevent the SMD LED failures due to thermal-mechanical stress during handling.
- Reflow Soldering
- The temperature (Top surface of SMD LED) profile is as below:

Solder = Lead-free		
Average ramp-up rate = 4°C/s max	Peak temperature = 250°C max.	
Preheat temperature = $150^{\circ}C \sim 200^{\circ}C$	Time within 5°C of actual Peak Temperature = 10s max.	
Preheat time = 100s max.	Duration above 217°C is 80s max.	
Ramp-down rate = $6^{\circ}C/s$ max.

## Packaging

- The boxes are not water resistant and they must be kept away from water and moisture.
- The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- Cardboard boxes will be used to protect the LEDs from mechanical shocks during transportation.
- The reel pack is applied in SMD LED.
- Max 1100 pcs per reel.
