## Data Sheet

 -xxxE denotes a lead-free product

## Description

The ASSR-V62X Series is specially designed to drive high power MOSFETs. It consists of an AIGaAs infrared lightemitting diode (LED) input stage optically coupled to an output detector circuit. The detector consists of a highspeed photovoltaic diode array and driver circuitry to switch on/off two discrete high voltage MOSFETs externally. The relay driver turns on (contact closes) with a minimum input current of 3 mA through the input LED. The relay driver turns off (contact opens) with an input voltage of 0.8 V or less.

The dual channel configurations, ASSR-V621 and ASSRV622, allow 2 independent MOSFETs to be driven. It has the versatility to double the photovoltaic voltage by connecting the 2 channels in series or to double the short circuit current by connecting the 2 channels in parallel. They are available in 8 -pin DIP and Gull Wing Surface Mount packages.

## Features

- Dual Channel Photovoltaic MOSFET Driver
- Open Circuit Voltage: 7VTypical
- Short Circuit Current: 20 2 A Typical
- Low Input Current: CMOS Compatibility
- Fast Switching Speed: 0.3 ms (Ton), 0.03 ms (Toff) Typical
- High Input-to-Output Insulation Voltage (Safety and Regulatory Pending Approvals)
- 3750 Vrms for 1 min per UL1577
- CSA Component Acceptance

## Applications

- Solid State Relay Module
- Voltage Supply for electronic circuits

## Ordering Information

ASSR-xxxx is UL Recognized with 3750 Vrms for 1 minute per UL1577 and is approved under CSA Component Acceptance Notice \#5, File CA 88324.

| Part numb | Option <br> HS Compliant | Package | Surface <br> Mount | Gull Wing | Tape \& Reel | Quantity |

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example:
ASSR-V621-002E to order product of 300mil DIP-8 package in tube packaging and RoHS Compliant.
Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Use of non-chlorine-activated fluxes is highly recommended.

Note: Non-Halide flux should be used.

## Regulatory Information

The ASSR-V621-002E and ASSR-V622-002E are approved by the following organizations:
UL
Approved under UL 1577, component recognition program up to $\mathrm{V}_{\text {ISO }}=3750 \mathrm{~V}_{\text {RMS }}$
Approved under CSA Component Acceptance Notice \#5.
