\*Read instruction manual carefully, before using the power supply unit.

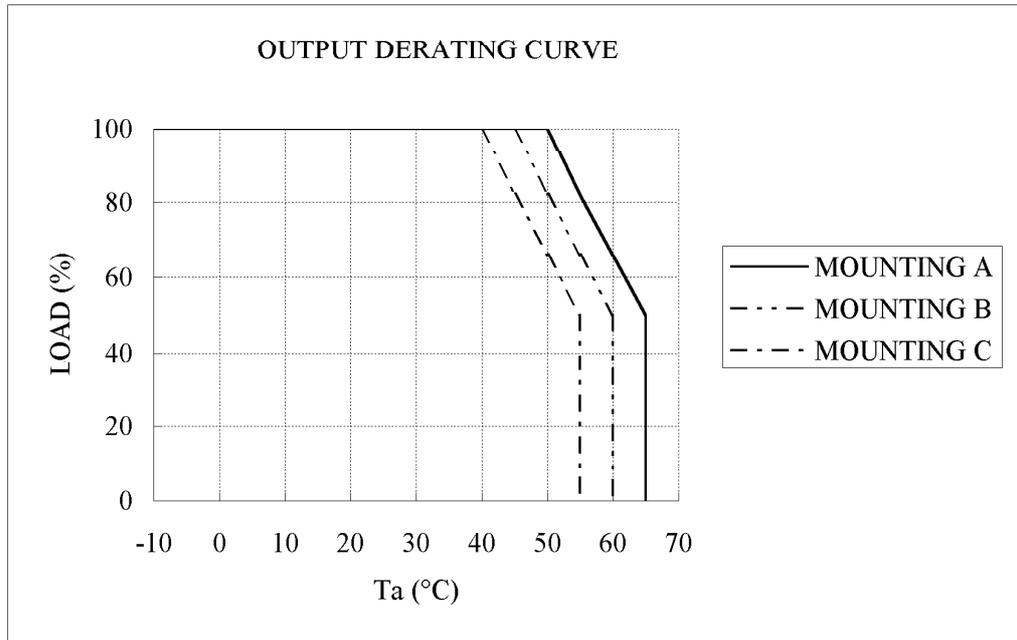

## =NOTES=

- \*1. For V2, V3 stability, to keep V1 minimum output current.
- \*2. At 100/200VAC, Ta=25°C and maximum output power.
- \*3. For cases where conformance to various safety specs (UL, CSA, EN) are required, input voltage range will be 100 - 240VAC(50/60Hz).
- \*4. No applicable for the in-rush current to Noise Filter less than 0.2ms.
- \*5. Measure with EIAJ RC-9131 probe, Bandwidth of scope :100MHz.
- \*6. 85 - 265VAC , constant load.
- \*7. Minimum load - Full load, constant input voltage.
- \*8. Constant current limit with automatic recovery.
- \*9. OVP circuit will shut down all outputs, manual reset (Line recycle).
- \*10. At 100/200VAC nominal output voltage and maximum total output power.
- \*11. Measured by the each measuring method of UL, CSA, EN and DENTORI (at 60Hz), Ta=25°C.
- \*12. Ratings - Derating at standard mounting.
  - Load (%) is percent of maximum output power or maximum output current, whichever is greater.
  - As for other mountings, refer to derating curve (A179-01-02).
- \*13. As for DENTORI, built to meet at 100VAC.
