# NLP150L Series Single and triple outputs

LOW TO MEDIUM POWER AC/DC POWER SUPPLIES 110-150W AC/DC Universal Input Switch Mode Power Supplies

- 90VAC to 264VAC universal input range
- Provides low voltage outputs of 3.3V
- EN61000-3-2 compliant
- Overvoltage and short circuit protection
- Power fail detection
- Current sharing (on V<sub>A</sub> and V<sub>B</sub>)
- 3.8 x 6.8 x 1.26 inches
- UL, CSA and VDE safety approvals and CE-marked to LVD
- Compliance to EN55022-B conducted noise standard
- Compliance to EN55022-A radiated noise standard
- Meets all applicable and relevant immunity standards EN61000-4-2, -3, -4, -5 and -6

The NLP150L series of 150 Watt AC/DC open frame power supplies are available with single, triple or quad outputs. The single and triple output versions described in this datasheet are housed in a 3.8 x 6.8 x 1.26 inch package. All NLP150L series power supplies are harmonic current corrected to meet the EN61000-3-2 standard, and support current sharing. The power supplies are designed for use in 1U shelves or boxes, and are primarily intended for networking applications that have a heavy logic content, such as access concentrators, midrange routers, LAN switches and shared media hubs.

Patent No. 5600546 and 5652700

**2 YEAR WARRANTY** 

SPECIFICATIONS

All specifications are typical at nominal input, full load at 25°C unless otherwise stated

### OUTPUT SPECIFICATIONS

Total regulation (Line and load)	Main output Auxiliary outputs	±2.0% ±5.0%
Turn-on delay	@ 120VAC Input	2.0s, max.
Transient response	Main output 75% to 100% step at 0.1A/µs	5.0% or 250mV max. dev., 1ms max. recovery to 1%
Temperature coefficient		±0.02%/°C
Overvoltage protection	Main outputs	125%, ±10%
Short circuit protection	Cyclic operation	Continuous
Minimum output current	Singles and multipl	le See table

#### INPUT SPECIFICATIONS

Input voltage range (See Note 12)	Universal input	90 to 264VAC
Input frequency range		47Hz to 63Hz
Input surge current	264VAC (cold start)	40A max.
Safety ground leakage current	264VAC, 60Hz	0.99mA
Input current	120VAC @ 150W 230VAC @ 150W	1.95A rms 1.10A rms
Input fuse	UL/IEC127	F3.15A H, 250VAC

#### Notes

- Free air convection. 1
- Multiple output units: maximum continuous output power not to exceed 110W and the output current not to exceed:  $I_A+I_B+2(I_C) \le 23A$ .
- 300LFM forced air cooling from the longer side. Multiple output units: maximum continuous output power not to exceed 150W and the output current not to exceed:  $|_{A}+|_{B}+2(l_{C})$ s2A. Peak power at 115% lasting less than 30 seconds with duty cycle less than
- 3
- 5%. During peak loading, output voltage may exceed total regulation limits.
  Figure is peak-to-peak for room temperature rating. Output noise measurements are made across a 20MHz bandwidth using a 6 inch twisted pair, terminated with a 10µF electrolytic capacitor and a 0.1µF ceramic capacitor
- 5 Minimum load required for correct start-up and operation on single outputs and on main output of multiple versions. Failure to observe minimum load on main output will not allow the supply to start-up correctly. Some electronic test loads have a large delay time before they start drawing current even though the voltage from the supply is present. During this time delay, there is no load on the output and as a result, the supply may not be able to start-up properly and maintain its correct output voltage. In these instances, a dummy resistive load across the output may be necessary to load the output of the supply until the test load can function correctly and draw the intended minimum load. Minimum load required on auxiliary outputs to maintain regulation.
- Three orthogonal axes, random vibration 10 minutes for each axes, 2.4G 6 rms 5Hz to 500Hz.
- For optimum reliability no part of the heatsink should exceed 110°C and no semi-conductor case temperature should exceed 115°C.
- CAUTION: Allow a minimum of 1 second after disconnecting line power when making thermal measurements.
- This product is only for inclusion by professional installers within other equipment and must not be operated as a stand alone product.
- 10 The EMI specifications reference measurements made with the power supply mounted on a grounded metal sheet extending 1 inch beyond each edge, using an unshielded cable. No external filtering required during conducted emissions testing but some applications may require additional filtering to achieve system compliance
- All models require a minimum mounting stand-off of 6.35mm (0.25 inches) 11 in the end use product.
- 12 Operational range 90VAC to 264VAC.
- 13 For 3.3V ouput (single), typical efficiency is 69%
