

Compact and Economical Switching Power Supply

- Models range from 10 to 50 W
- Open-frame and covered types
- Wide range of output voltage:
5-, 12-, 15- and 24-V models
- UL, CSA approved
- 3-year warranty

Specifications

Output capacity	10 W	15 W	25 W	50 W
Efficiency (typical)	73% to 83% (depends on the model)			
Input				
Voltage	120 VAC (85 to 132 V) 110 to 170 VDC			
Frequency	47 to 450 Hz			
Current (with rated I/O)	0.4 A max.	0.5 A max.	0.7 A max.	1.4 A max.
Leakage current (with rated I/O)	0.5 mA max.			
Inrush current (with rated I/O)	25 A max. (at 25°C)			
Noise filter	Yes			
Output				
Voltage adjustment range	±5% adjustable with variable resistor (V.ADJ)			
Ripple	2% (p-p) max.			
Input variation influence	0.4% max. (at 85 to 132 VAC input, 100% load)			
Load variation influence	0.8% max. (with rated input, 10% to 100% load)			
Temperature variation influence	0.05%/°C max. (with rated input and output)			
Rise time	100 ms max.			300 ms max.
Hold time	20 ms min.			
Additional functions				
Overload protection	105% min. of rated load current (typical), inverted L drop type, automatic reset			
Overvoltage protection	Yes (5-V output models only)

Characteristics				
Ambient temperature	Operating	See the derating curve in the <i>Engineering Data</i> section.		
Ambient temperature	Storage	-20°C to 65°C (-4°F to 149°F)		
Ambient humidity	Operating	25% to 85%		
Ambient humidity	Storage	20% to 90%		
Dielectric strength	2,000 VAC, 50/60 Hz for 1 min. (between all inputs and outputs/GR terminal)			
Insulation resistance	100 MΩ min. at 500 VDC (between all outputs and inputs/GR terminal)			
Vibration resistance	Malfunction: 10 to 55 Hz, 0.75-mm double amplitude (44.1 m/s ² , approx. 4.5G) for 2 h each in X, Y, and Z directions			
Shock resistance	Malfunction: 294 m/s ² (approx. 30G), 3 times each in ±X, ±Y, and ±Z directions			
Output indicator	Green LED			
Electromagnetic interference	Conforms to FCC class A standards and 1st group of VCCI			
Approved standards	UL 1012, CSA E.B.1402			
Life expectancy	8 yrs. min. (40°C at the rated input with a 50% load)			
Weight (covered-type)	200 g max.	240 g max.	320 g max.	440 g max.

Note: Ratings and characteristics are defined at the power supply output terminals.
DC inputs are not included in safety standard approvals.

■ DERATING CURVE

Note: The derating curve depends on the mounting position of the power supply. The left curve is obtained from a model mounted in one of the standard positions.

■ OVERVOLTAGE PROTECTION (5-V OUTPUT MODELS ONLY)

Models with a power rating of 10 or 15 W incorporate a Zener diode clamp circuit. If the protection circuit is triggered, contact your OMRON representative for repairs.

Models with a power rating of 25 or 50 W incorporate a shut-off circuit. If the protection circuit is triggered, turn off the input power and leave the power supply off for at least one minute before turning it on again.

OVERLOAD PROTECTION

The power supply has an overload protection function that protects the load and the power supply from possible damage by overcurrent. When the output current rises above a set value (105% of the rated output current), the protection function is triggered, decreasing the output voltage. When the output current falls within the rated range, the overload protection function is automatically cleared.

50 W

Note: Only the S8E1 with an output of 5 V incorporates an overvoltage protection circuit.

■ GENERATING OUTPUT VOLTAGE (\pm)

An output of \pm can be generated by using two power supplies as shown below, because the power supply produces a floating output.

If operation amplifiers as loads are connected in series, connect a diode between the positive and negative output terminals of each power supply as shown in the illustration below. Consult your OMRON representative for the specifications of the diode. No diode is necessary for models with power ratings of 50 W.

■ SERIES OPERATION

Only models with power ratings of 50 W allow series operation.

■ PARALLEL OPERATION

The output of two S8E1 cannot be combined in parallel.

Installation

1. **DC Output Terminals:** Connect the load lines to these terminals.

2. **Input Terminals:** Connect the input lines to these terminals.

Note: A fuse is inserted into the AC (L) side.

3. **Ground Terminals:** Connect a ground line to this terminal.

4. **Output LED Indicator:** Lights while a Direct Current (DC) output is ON.

5. **V.ADJ Adjuster:** It is possible to increase or decrease the output voltage by 5%.

6. **NC Terminals:** Leave unconnected.

Precautions

■ MOUNTING

- Mount the power supply so that air flow takes place around it. To improve and maintain the reliability, the power supply is designed to dissipate heat by using natural air flow.
- Mounting the power supply to a metal plate is recommended.

Two or More Power Supplies Side-by-Side

- When mounting two or more power supplies side by side, allow at least 20 mm (0.79 in) spacing between them, as shown in the following illustration.
- Forced-air cooling is recommended.

Open-Frame and Covered-Type

- (A). Side mounting
- (B). Bottom mounting (secured with screws from the inside of the power supply)

Note: This method is not possible with the covered-type.

- (C). Back mounting (secured with screws from the back of the power supply)

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
