Description

The STEVAL-IPT002V1 demonstration board is based on the ST8024 smartcard interface. The ST8024 is designed to minimize the complexity of microprocessor hardware and software in applications requiring a smartcard, such as set-top boxes, electronic payment systems, pay TV, and identification cards. It is developed in accordance with NDS (News Digital Systems) conditional access requirements, and implements all blocks and procedures necessary for card activation/deactivation and checking.
