

DS16EV5110-EVKH HDMI Extender Demo Kit for HDMI Cables

General Description

The DS16EV5110-EVKH HDMI Cable Extender Demo Kit provides a complete HDMI system extension solution using National's DS16EV5110 - a Video Equalizer for HDMI cables.

Two HDMI female connectors are used as the input and the output connections for a HDMI system.

The DDC signals, Hot Plug, 5V Power and 5V Ground are directly connected between the HDMI connectors, making this demo kit HDCP compliant.

A 3.3V VCC 1-pin header (J4) and a GND 1-pin header (J5) are used for the power supply.

Alternately, an AC/DC power adapter (>800mA) is required for the evaluation kit to provide 5V DC voltage for easy portability. A 1.8mm DC Power Jack is used to connect the AC/DC Power Adapter. National's LP3964, a 3.3V, 800mA, Fast, Ultra Low Dropout Linear Regulator, converts the 5V power supply voltage to a 3.3V power supply voltage that powers the DS16EV5110.

Quick Start Guide:

1. Connect 3.3V DC power to J4 and ground to J5 from the power supply.
Or, plug the AC/DC power adapter to the DC power Jack
AC/DC power adapter requirement: Output DC 4V~6V, Output current > 800mA
2. Attach two HDMI cables to the HDMI Input and Output Connectors
3. Turn on the DVD/Computer and the Monitor/HDTV.

Adjustment and Control Description

Component	Name	Function
D1	PWR	The LED turns on when 5V DC applies
D2	SD	The LED turns on when the DS16EV5110 does not detect clock signal
J3	5V DC	Optional DC Power Jack for 1.5 mm Adaptor Plug
J4	3.3V	3.3V VCC power supply
J5	GND	GND
J7	FEB	Optional SMBus Control. See Datasheet.
J8	CS	Optional SMBus Control. See Datasheet
J10, J11	SDA, SDC	Optional SMBus access. See Datasheet
J9	Loop Back Control	Connect "LED" and "SD" to enable D2 function. Connect "SD" and "EN" to enable look back control function. When the clock signal is not detected, the DS16EV5110 sets to power down mode.
U3	Rotary Switch	Turn the switch to control the EQ boost setting. "0" on the switch refers to the boost setting of "0X00", "7" on the switch refers to the boost setting of "0X07". See datasheet for detail Boost setting information.

Layout Considerations

- Keep the clock and data transmission lines as short as possible with controlled 50 ohm single-ended impedance. Or, use differentially coupled traces with 100 ohm impedance.
- Avoid using vias on the clock and data transmission lines on the input side of the DS16EV5110.
- Place power supply decoupling capacitors close to the VCC pins.
