## Murata Power Solutions

## FEATURES

- ROHS COMPLIANT
- HIGH ISOLATION - 4000V RATING
- 8000V ISOLATION TEST VOLTAGE
- BARRIER 100\% PRODUCTION TESTED
- LOW BARRIER CAPACITANCE - 10PF
- LOW LEAKAGE CURRENT - $2 \mu A$ MAX
- 24-PIN DIP PACKAGE
- INTERNAL FILTERING

## APPLICATIONS

- BIOMEDICAL DATA ACQUISITION
- INDUSTRIAL PROCESS CONTROL

■ ANALYTICAL MEASUREMENTS

- GROUND LOOP ELIMINATION
- INTRINSIC SAFETY SYSTEMS
is possible with bipolar power transistors. Reduced parts count adds to the reliability of the PWR13XXC Series. The high efficiency of the PWR13XXC Series means less internal power dissipation. With less heat to dissipate, the PWR13XXC Series can operate over a wider ambient temperature range with no degradation of reliable operation.
The PWR13XXC Series offers the user low cost without sacrificing reliability. The use of surface mounted devices and manufacturing technologies make it possible to offer premium performance and technologies make it possible to offer premium performance and
low cost. Testing of the PWR13XXC isolation barrier is performed per the methods set forth by UL544, VDE750, CSA 22.2 and IEC 601-1.
technology to realize superior reliability and performance. A 220 kHz
driven push-pull oscillator is used to ensure stable frequency and
non-saturating operation of the input stage. This means there are no high peak voltages or currents like other design topologies, which can reduce unit reliability. Reliability is further enhanced by the use of MOSPOWER transistors. These rugged devices permit higher frequency operation with less complicated drive circuitry than

## DESCRIPTION

The PWR13XXC Series offers a broad line of low-cost, high-isolation voltage, unregulated, single and dual output DC/DC converters in a 24 -pin DIP package. These small converters offer a 4000V isolation rating in a $1.25^{\prime \prime} \times 0.8^{\prime \prime}$ package area.

The dielectric withstand characteristics of each converter is tested in production to ensure barrier integrity. During the development of the PWR13XXC Series extensive testing was done to verify that subjecting the barrier to as many as ten barrier tests will not destroy the barrier.

The PWR13XXC Series uses advanced circuit design and packaging technology to realize superior reliability and performance. A 220 kHz

ORDERING INFORMATION

## MECHANICAL

## SOLDERING INFORMATION

The PWR13XXC devices are intended for wave soldering or manual soldering.
They are not intended to be subject to surface mount processes under any circumstances.
The normal wave soldering process can be used with these devices where the device is subjected to a maximum wave temperature of $260^{\circ} \mathrm{C}$ for a period of no more than 10 seconds. Within this time and temperature range, the integrity of the device's plastic body will not be compromised and internal temperatures within the converter will not exceed $175^{\circ} \mathrm{C}$. Care should be taken to control manual soldering limits identical to that of wave soldering.
