

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

"Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

## Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.  
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

## Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.

# Section 1 Connecting the Emulator with the User System

## 1.1 Components of the E10A Emulator

The H8SX/1527F E10A emulator supports the H8SX/1527F and H8SX/1525F (hereafter referred to as the MCU unless the description is specific to any of them). Table 1.1 lists the components of the H8SX/1527F E10A emulator.

**Table 1.1 Components of the E10A Emulator (HS1527KCM01H or HS1527KCI01H)**

Classification	Component	Appearance	Quantity	Remarks
Hard-ware	Card emulator HS1527KCM01H (Model: HS0005KCM05H), HS1527KCI01H (Model: HS0005KCI05H)	 (PCMCIA)	1	HS1527KCM01H (PCMCIA: 14-pin type): Depth: 85.6 mm, Width: 54.0 mm, Height: 5.0 mm, Mass: 30.0 g  HS1527KCI01H (PCI: 14-pin type): Depth: 122.0 mm, Width: 96.0 mm, Mass: 80.0 g
		or   (PCI)		
	User system interface cable		1	HS1527KCM01H (PCMCIA: 14-pin type): Length: 80.0 cm, Mass: 46.0 g  HS1527KCI01H (PCI: 14-pin type): Length: 150.0 cm, Mass: 90.0 g
Soft-ware	H8SX/1527F E10A emulator setup program, H8SX Family E10A Emulator User's Manual, and Specific Guide for the H8SX/1527F, H8SX/1525F E10A Emulator		1	HS1527KCM01SR,  HS0005KCI01HJ, HS0005KCI01HE,  HS1527KCI01HJ-U2, and HS1527KCI01HE-U2 (provided on a CD-R)

## 1.2 Connecting the E10A Emulator with the User System

Before connecting an E10A emulator with the user system, a connector must be installed in the user system so that an user system interface cable can be connected. When designing the user system, refer to the connector and recommended circuits shown in this manual.

Before designing the user system, be sure to read the E10A emulator user's manual and the hardware manual for related MCUs.

Connect pins 8, 9, 10, 12, 13, and 14 of the user system connector to GND firmly on the PCB. These pins are used as electrical GND and to monitor the connection of the user system connector. Note the pin assignments of the user system connector.

**Figure 1.1 Connecting the User System Interface Cable to the User System**

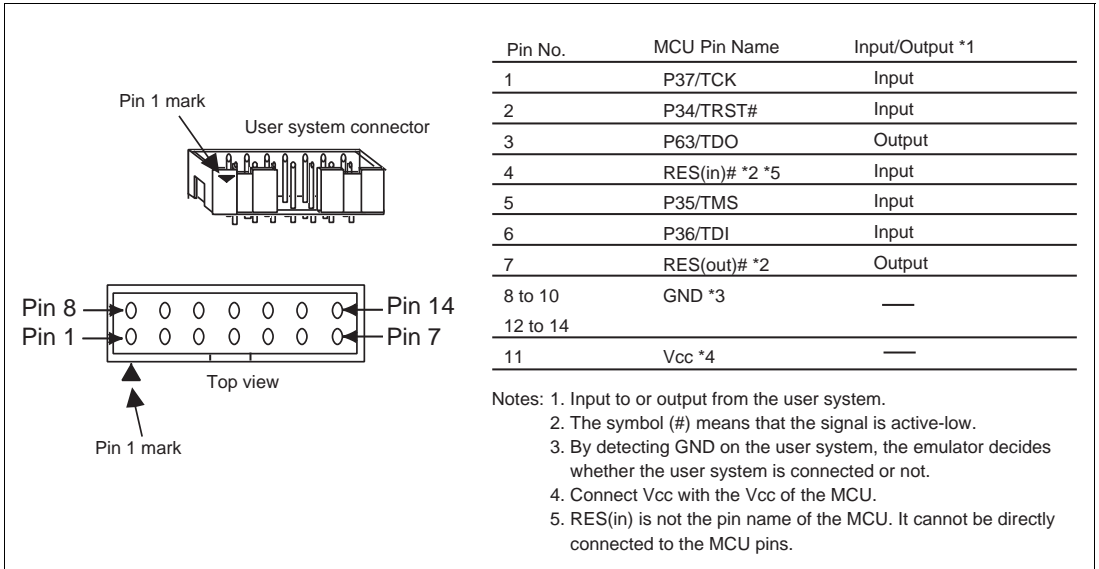

- Notes:
1. The pin number assignments of the 14-pin connector differ from those of the E10T emulator; however, the physical location is the same.
  2. Do not place any components within 3 mm of the connector.

# **WARNING**

**Be sure to place the GND line of the user system interface cable on the GND of the user system with a screw, etc. Failure to do so will result in a FIRE HAZARD due to an overcurrent and will damage the user system, the emulator product, and the host computer.**

### 1.3 Pin Assignments of the E10A Connector

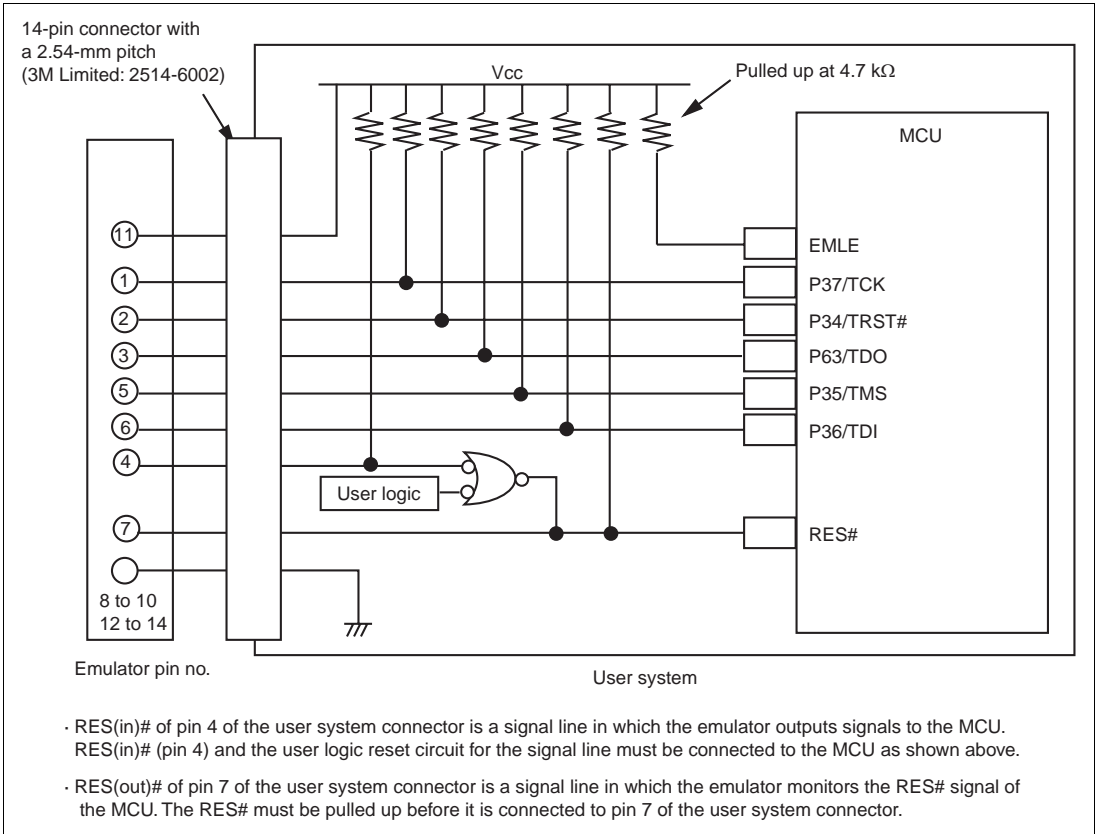

Figure 1.2 shows the pin assignments of the user system connector.

**Figure 1.2 Pin Assignments of the User System Connector**

## 1.4 Example of Emulator Connection

The figure shown below is an example of connecting the user system to the emulator.

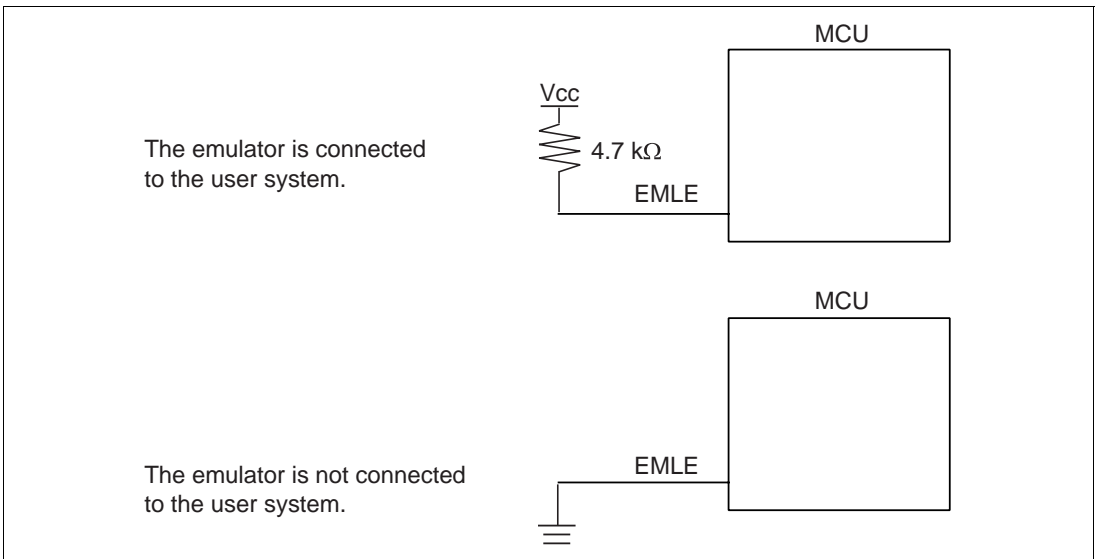

**Figure 1.3 Example of Emulator Connection**

Notes: 1. P34/TRST#, P37/TCK, P35/TMS, P63/TDO, and P36/TDI are used by the emulator.  
Pull up and connect the emulator and the MCU pins.

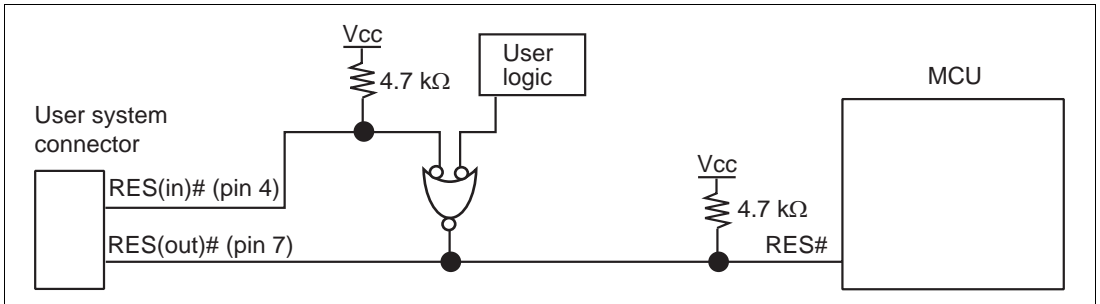

**Figure 1.4 Connection of Emulator and MCU**

2. If the emulator is connected to the user system, pull up pin EMLE of the MCU, and when the emulator is not connected to the user system, ground the EMLE.

**Figure 1.5 Emulator and Pin EMLE**

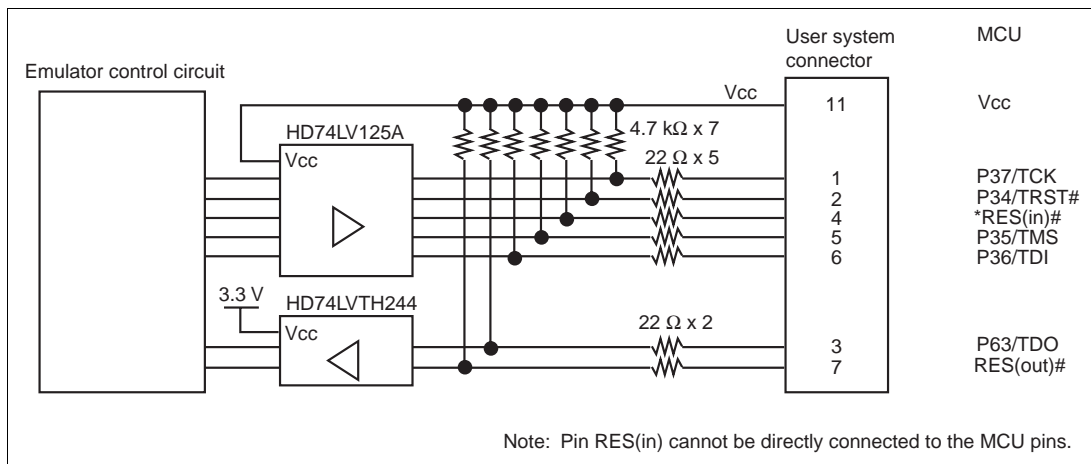

3. RES(in)# of pin 4 of the user system connector is a signal line in which the emulator outputs signals to the MCU. RES(in)# of pin 4 and the user logic reset circuit for the signal line must be connected to pin RES# of the MCU as shown in figure 1.6. RES(out)# of pin 7 of the user system connector is a signal line in which the emulator monitors pin RES# of the MCU. The RES# must be pulled up before it is connected to pin 7 of the user system connector.

**Figure 1.6 Connection of Pin RES#**

4. Ground pins 8, 9, 10, 12, 13, and 14 of the user system connector.
5. Pin 11 of the user system connector must be connected to the user system Vcc (power supply). The amount of voltage permitted to input to the user system connector must be within the guaranteed range of the MCU.

6. Figure 1.7 shows the interface circuit in the emulator. Use this figure as a reference to decide the pull-up resistance value.

**Figure 1.7 Interface Circuit in the Emulator (Reference)**

7. When the MCU in use is connected to the emulator, the pin functions listed below are not available.

**Table 1.2 Pin Functions Not Available**

H8SX/1527F	H8SX/1525F
P63 and P34 to P37	P63 and P34 to P37
IRQ11-B#	IRQ11-B#
PO12 to PO15	—
TIOCA1 to TIOCA2, TIOCB1 to TIOCB2, TCLKC, and TCLKD	—

The symbol (#) means that the signal is active-low.

# Section 2 Specification of the E10A Emulator's Software

## 2.1 Differences between the H8SX/1527F or H8SX/1525F and the E10A Emulator

1. When the E10A emulator system is initiated, it initializes the general registers and part of the control registers as shown in table 2.1.

**Table 2.1 Register Initial Values at E10A Emulator Power-On**

Register	Initial Value
PC	Reset vector value in the vector address table
ER0 to ER6	H'0
ER7 (SP)	H'10
CCR	1 for I mask, and others undefined
EXR	H'7F

### 2. System Control Register

In the E10A emulator, the internal I/O registers can be accessed from the [IO] window. However, be careful when accessing the system control register. The E10A emulator saves the register value of the system control register at a break and returns the value when the user program is executed. Since this is done during a break, do not rewrite the system control register in the [IO] window.

### 3. Memory Access during Emulation

If the memory contents are referenced or modified during emulation, realtime emulation cannot be performed because the user program is temporarily halted.

### 4. The E10A emulator communicates with the MCU by using the P34/TRST#, P37/TCK, P35/TMS, P63/TDO, and P36/TDI pins. These pins cannot be used.

### 5. The power consumed by the MCU can reach several mA. This is because the user power supply drives one HD74LV125A to make the communication signal level match the user-system power-supply voltage.

### 6. Do not use an MCU that has been used for debugging.

If the flash memory is reprogrammed many times, and the MCU is left for a few days, data may be lost due to retention problems.

If the flash memory is reprogrammed many times, the data will not be erased. If an error message is displayed, exchange the MCU for a new one.

7. MCU Operating Mode

Use the E10A emulator in mode 3 (single-chip mode).

8. Sum Data Displayed in the Writing Flash memory Mode

Sum data, which is displayed in the 'Writing Flash memory' mode, is a value that data in the whole ROM areas has been added by bytes.

9. Note on Executing the User Program

The set value is rewritten since the emulator uses flash memory and watchdog timer registers during programming (Go, Step In, Step Out, or Step Over) of the flash memory.

10. Note on Software Standby

The [STOP] button is disabled during software standby mode.

11. Note on Reprogramming the Flash Memory

While the flash memory is reprogrammed during Go operation, actual reprogramming will not be performed if the flash memory is reprogrammed on the [Memory] window. Therefore, the contents will not be displayed correctly on the [Memory] window.

## 2.2 The H8SX/1527F E10A Emulator Functions

- Notes:
1. Do not use an MCU that has been used for debugging.
  2. If the flash memory is reprogrammed many times, and the E10A emulator is left for a few days, data may be lost due to retention problems.
  3. If the flash memory is reprogrammed many times, the data will not be erased. If an error message is displayed, exchange the MCU for a new one.

### 2.2.1 E10A Emulator Driver Selection

Table 2.2 shows drivers which can be selected in the [E10A Driver Details] dialog box.

**Table 2.2 Type Name and Driver**

Type Name	Driver
HS1527KCM01H	E10A PC Card Driver 5
HS1527KCI01H	E10A PCI Card Driver 5

## 2.2.2 Hardware Break Functions

**Hardware Break Conditions:** In the H8SX/1527F E10A emulator, conditions of Break Condition 1,2,3,4 can be set. Table 2.3 lists the items that can be specified.

**Table 2.3 Hardware Break Condition Specification Items**

Items	Description
Address bus condition	Breaks when the MCU address bus value matches the specified value. It is possible to select whether a break is generated before or after prefetched address execution. When [User mask] is selected, a value to be masked "*" can be set. For masked bits, the condition is satisfied for any values.
Data bus condition	Breaks when the MCU data bus value matches the specified value. Byte, word, or longword can be specified as the access data size. When [User mask] is selected, a value to be masked "*" can be set. For masked bits, the condition is satisfied for any values.
Bus master condition	Breaks when the values of DATA, DTC, and DMA cycles match the specified values.
Read or write condition	Breaks in the read or write cycle.
Execution count condition	The condition specified with Break Condition 1 breaks after the execution count condition specified here has been satisfied.

Table 2.4 lists the combinations of conditions that can be set in the [Break condition] dialog box.

**Table 2.4 Conditions Set in [Break condition] Dialog Box**

Dialog Box	Condition				
	Address Bus Condition	Data Condition	Bus Master Condition	Read or Write Condition	Execution Count Condition
[Break condition 1]	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
[Break condition 2]	<input type="radio"/>	<input checked="" type="checkbox"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="checkbox"/>
[Break condition 3]	<input type="radio"/>	<input checked="" type="checkbox"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="checkbox"/>
[Break condition 4]	<input type="radio"/>	<input checked="" type="checkbox"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="checkbox"/>

Note: : Can be set by checking the radio button in the dialog box.

Table 2.5 lists the combinations of conditions that can be set by the BREAKCONDITION\_SET command.

**Table 2.5 Conditions Set by BREAKCONDITION\_SET Command**

Channel	Condition				
	Address Bus Condition (option <addropt>)	Data Condition (option <dataopt>)	Bus Master Condition (option <accessopt>)	Read or Write Condition (option <r/wopt>)	Execution Count Condition (option <countopt>)
Break condition 1	O	O	O	O	O
Break condition 2	O	X	O	O	X
Break condition 3	O	X	O	O	X
Break condition 4	O	X	O	O	X

Note: O: Can be set by the BREAKCONDITION\_SET command.

**Notes on Setting the Break Condition:**

1. When [Step In], [Step Over], or [Step Out] is selected, the settings of Break Condition are disabled.
2. The settings of Break Condition are disabled when an instruction to which a BREAKPOINT has been set is executed.
3. When step over function is used, the settings of BREAKPOINT and Break Condition are disabled.

### 2.2.3 Notes on Setting the [Breakpoint] Dialog Box

1. When an odd address is set, the address is rounded down to an even address.
2. A BREAKPOINT is accomplished by replacing instructions. Accordingly, it can be set only to the flash memory or the RAM area. However, a BREAKPOINT cannot be set to the following addresses:
  - An area other than flash memory or RAM
  - An area occupied by the E10A emulator program
  - An instruction in which Break Condition is satisfied
3. During step execution, a BREAKPOINT is disabled.
4. A condition set at Break Condition is disabled immediately after starting execution when an instruction at a BREAKPOINT is executed. A break does not occur even if a condition of Break Condition is satisfied immediately after starting the execution.
5. When execution resumes from the breakpoint address after the program execution stops at the BREAKPOINT, single-step execution is performed at the address before execution resumes. Therefore, realtime operation cannot be performed.
6. Settings of BREAKPOINT and Break Condition are invalid while the STEP OVER function is being used.

### 2.2.4 Sequential Break Function

The user program is halted when conditions of the Break Condition for channels 2 to 4 are matched. This function can be set in the [Emulation mode] drop-down list box of the [Configuration] dialog box.

**Table 2.6 Sequential Break Condition Specification Items**

<b>Items</b>	<b>Description</b>
Sequential break Condition 2-1	Halts a program when a condition is satisfied in the order of Break Condition 2, 1. Break Condition 1, 2 must be set.
Sequential break Condition 3-2-1	Halts a program when a condition is satisfied in the order of Break Condition 3, 2, 1. Break Condition 1, 2, 3 must be set.
Sequential break Condition 4-3-2-1	Halts a program when a condition is satisfied in the order of Break Condition 4, 3, 2, 1. Break Condition 1, 2, 3, 4 must be set.

### **2.2.5 Note on Using the JTAG Clock (TCK)**

When the JTAG clock (TCK) is used, set the frequency to lower than that of the system clock.

### **2.2.6 Trace Function**

The trace function in the H8SX/1527F E10A emulator uses the eight-branch-instruction trace function in the MCU, and acquires a trace by operating the user program in realtime. The branch-instruction trace function displays the branch-source address, the mnemonic, and the operand.
