

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

INTRODUCTION

Product Overview

The IE-780233-NS-EM4 is designed to be used with the IE-78K0-NS and IE-78K0-NS-P01 to debug the following target device that belongs to the 78K/0 Series of 8-bit single-chip microcontrollers.

- μ PD780232 Subseries: μ PD780232

Target Readers

This manual is intended for engineers who will use the IE-780233-NS-EM4 with the IE-78K0-NS and IE-78K0-NS-P01 to perform system debugging.

Engineers who use this manual are expected to be thoroughly familiar with the target device's functions and use methods and to be knowledgeable about debugging.

Organization

When using the IE-780233-NS-EM4, refer to not only this manual (supplied with the IE-780233-NS-EM4) but also the manual that is supplied with the IE-78K0-NS and IE-78K0-NS-P01.

IE-78K0-NS User's Manual	IE-780233-NS-EM4 User's Manual	IE-78K0-NS-P01 User's Manual
<ul style="list-style-type: none">• Basic specifications• System configuration• External interface functions	<ul style="list-style-type: none">• General• Part names• Installation• Differences between target devices and target interface circuits	<ul style="list-style-type: none">• Functional outline

Purpose

This manual's purpose is to explain various debugging functions that can be performed when using the IE-780233-NS-EM4.

Terminology

The meanings of certain terms used in this manual are listed below.

Term	Meaning
Emulation device	This is a general term that refers to the device in the emulator that is used to emulate the target device. It includes the emulation CPU.
Emulation CPU	This is the CPU block in the emulator that is used to execute user-generated programs.
Target device	This is the device to be emulated (a real chip).
Target system	This includes the target program and the hardware provided by the user. When defined narrowly, it includes only the hardware.
IE system	This refers to the combination of the IE-78K0-NS, IE-78K0-NS-P01, and the IE-780233-NS-EM4.

Conventions

Data significance: Higher digits on the left and lower digits on the right

Note: Footnote for item marked with **Note** in the text

Caution: Information requiring particular attention

Remark: Supplementary information

Related Documents

The related documents (user's manuals) indicated in this publication may include preliminary versions. However, preliminary versions are not marked as such.

CHAPTER 1 GENERAL

The IE-780233-NS-EM4 is a development tool for efficient debugging of hardware or software when using the following target device that belongs to the 78K/0 Series of 8-bit single-chip microcontrollers.

This chapter describes the IE-780233-NS-EM4's system configuration and basic specifications.

- Target device
 - μ PD780232 Subseries

1.1 System Configuration

Figure 1-1 illustrates the IE-780233-NS-EM4's system configuration.

Figure 1-1. System Configuration

Notes 1. The device file is as follows, in accordance with the subseries.

μ SxxxxDF780233: μ PD780232 Subseries

2. The emulation probe is as follows, in accordance with the package.

NP-80GC: 80-pin plastic QFP (GC type)

The NP-80GC is a product of Naito Densai Machida Mfg. Co., Ltd.

For further information, contact Naito Densai Machida Mfg. Co., Ltd. (TEL: +81-44-822-3813)

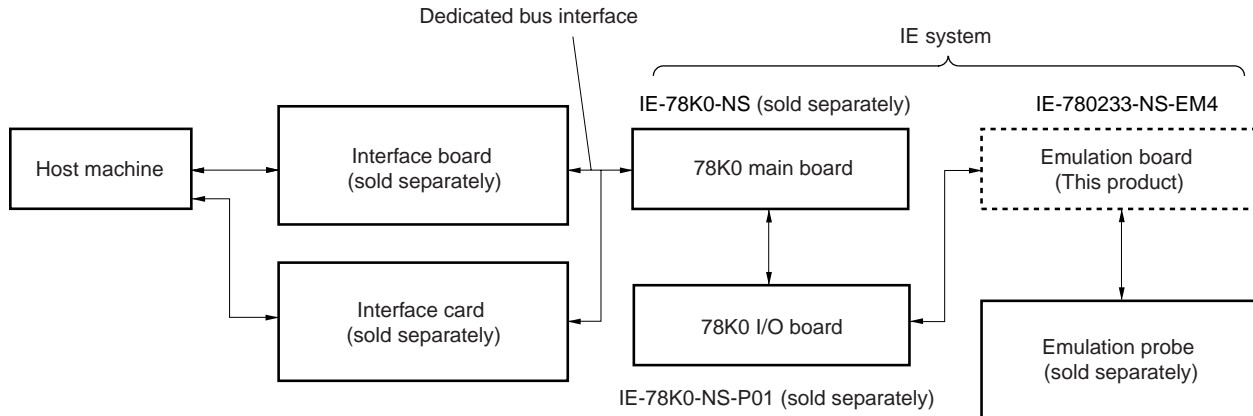

3. The conversion socket/conversion adapter are as follows, in accordance with the package.

EV-9200GC-80: 80-pin plastic QFP (GC type)

1.2 Hardware Configuration

Figure 1-2 shows the IE-780233-NS-EM4's position in the basic hardware configuration.

Figure 1-2. Basic Hardware Configuration

1.3 Basic Specifications

The IE-780233-NS-EM4's basic specifications are listed in Table 1-1.

Table 1-1. Basic Specifications

Parameter	Description
Target device	μ PD780232, 78F0233 Subseries
System clock	5.00 MHz
Main system clock supply	External: Input from the target system via an emulation probe Internal: Mounted on the emulation board (5.00 MHz) or mounted on the parts board by the user
Low voltage support	Not provided

[MEMO]

CHAPTER 2 PART NAMES

This chapter introduces the parts of the IE-780233-NS-EM4 main unit.

The packing box contains the emulation board (IE-780233-NS-EM4), packing list, user's manual, and guarantee card.

If there are any missing or damaged items, please contact an NEC sales representative.

Fill out and return the guarantee card that comes with the main unit.

2.1 Parts of Main Unit

Figure 2-1. IE-780233-NS-EM4 Part Names

CHAPTER 3 INSTALLATION

This chapter describes methods for connecting the IE-780233-NS-EM4 to the IE-78K0-NS, IE-78K0-NS-P01, emulation probe, etc. Mode setting methods are also described.

Caution Connecting or removing components to or from the target system, or making switch or other setting changes must be carried out after the power supply to both the IE system and the target system has been switched OFF.

3.1 Connection

(1) Connection with IE-78K0-NS main unit

See the **IE-78K0-NS User's Manual (U13731E)** for a description of how to connect the IE-780233-NS-EM4 to the IE-78K0-NS.

(2) Connection with emulation probe

See the **IE-78K0-NS User's Manual (U13731E)** for a description of how to connect an emulation probe to the IE-780233-NS-EM4.

On this board, connect the emulation probe to CN6.

Caution Incorrect connection may damage the IE system.

Be sure to read the emulation probe's user's manual for a detailed description of the connection method.

Figure 3-1. Connection of Emulation Probe

3.2 Clock Settings

3.2.1 Overview of clock settings

The main system clock to be used during debugging can be selected from (1) to (3) below.

- (1) Clock that is already mounted on emulation board
- (2) Clock that is mounted by user
- (3) External clock

If the target system includes an internal clock, select either “(1) Clock that is already mounted on emulation board” or “(2) Clock that is mounted by user”. For an internal clock, a resonator is connected to the target device and the target device’s internal oscillator is used. An example of the external circuit is shown in part (a) of Figure 3-2. During emulation, the resonator that is mounted on the target system is not used. Instead, the clock that is mounted on the emulation board installed for the IE-78K0-NS is used.

If the target system includes an external clock, select “(3) External clock”.

For an external clock, a clock signal is supplied from outside the target device and the target device’s internal oscillator is not used. An example of the external circuit is shown in part (b) of Figure 3-2.

Caution The IE system will be hung-up if the main system clock is not supplied normally. Moreover, be sure to input a rectangular wave as the clock from the target. The IE system does not operate if the crystal resonator is connected to X1 (main system clock).

Figure 3-2. External Circuits Used as System Clock Oscillator

(1) Clock that is already mounted on emulation board

A crystal oscillator (X1) is already mounted on the emulation board. Its frequency is 5.0 MHz.

Figure 3-3. When Using Clock That Is Already Mounted on Emulation Board

Remark The clock that is supplied by the IE-780233-NS-EM4's oscillator (encircled in the figure) is used.

(2) Clock that is mounted by user

The user is able to mount any clock supported by the set specifications on the IE-780233-NS-EM4.

Remove the crystal oscillator (X1) that is already mounted on the emulation board, and mount either the parts board on which the resonator to be used is mounted or an oscillator. This method is useful when using a different frequency from that of the pre-mounted clock.

Figure 3-4. When Using User-Mounted Clock

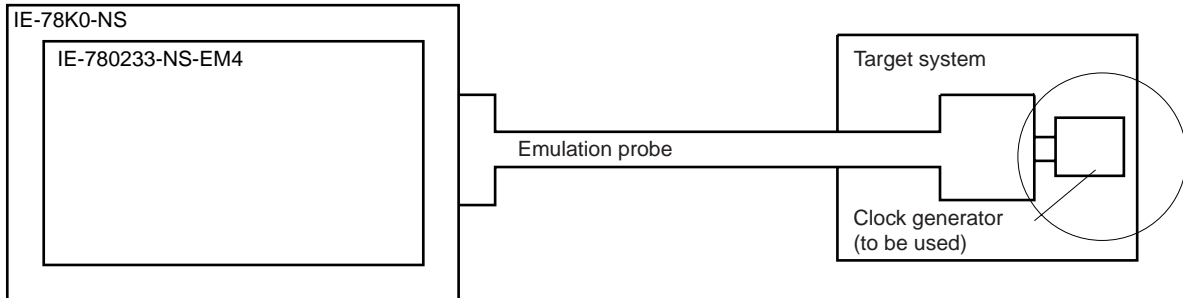

Remark The clock that is supplied by the IE-780233-NS-EM4's resonator or oscillator (encircled in the figure) is used.

(3) External clock

An external clock connected to the target system can be used via an emulation probe.

Figure 3-5. When Using External Clock

Remark The clock supplied by the target system's clock generator (encircled in the figure) is used.

3.2.2 Main system clock settings

Table 3-1. Main System Clock Settings

Frequency of Main System Clock		IE-780233-NS-EM4	CPU Clock Source Selection (ID)
		X1 Socket	
When using clock that is already mounted on emulation board	5.0 MHz	Oscillator used	Internal
When using clock mounted by user	Other than 5.0 MHz	Oscillator assembled by user	
When using external clock			Oscillator (not used)

Caution When using an external clock, open the configuration dialog box when starting the integrated debugger (ID78K0-NS) and select “External” in the area (Clock) for selecting the CPU’s clock source (this selects the user’s clock).

Remark When the IE-780233-NS-EM4 is shipped, the settings for “when using clock that is already mounted on emulation board” are preset.

(1) When using clock that is already mounted on emulation board

When the IE-780233-NS-EM4 is shipped, a 5.0 MHz crystal oscillator is already mounted in the IE-780233-NS-EM4’s X1 socket. When using the factory-set mode settings, there is no need to make any other hardware settings.

When starting the integrated debugger (ID78K0-NS), open the configuration dialog box and select “Internal” in the area (Clock) for selecting the CPU’s clock source (this selects the emulator’s internal clock).

(2) When using clock mounted by user

The settings described under either (a) or (b) are required, depending on the type of clock to be used. When starting the integrated debugger (ID78K0-NS), open the configuration dialog box and select "Internal" in the area (Clock) for selecting the CPU's clock source (this selects the emulator's internal clock).

(a) When using a ceramic resonator or crystal resonator

- Items to be prepared
 - Parts board (supplied with IE-78K0-NS)
 - Ceramic resonator or crystal resonator
 - Resistor Rx
- Capacitor CA
- Capacitor CB
- Solder kit

<Steps>

- <1> Solder the target ceramic resonator or crystal resonator, resistor Rx, capacitor CA, and capacitor CB (all with suitable oscillation frequency) onto the supplied parts board (as shown below).

Figure 3-6. Connections on Parts Board (When Using User-Mounted Clock)

Parts board (X1)

Pin No.	Connection
2-13	Capacitor CA
3-12	Capacitor CB
4-11	Ceramic resonator or crystal resonator
5-10	Resistor Rx
8-9	Short

Circuit diagram

Remark The sections enclosed in broken lines indicate parts that are attached to the parts board.

- <2> Prepare the IE-780233-NS-EM4.
- <3> Remove the crystal oscillator that is mounted in the IE-780233-NS-EM4's socket (the socket marked as X1).
- <4> Connect the parts board (from <1> above) to the socket (X1) from which the crystal oscillator was removed. Check the pin 1 mark to make sure the board is mounted in the correct direction.
- <5> Make sure that the parts board is wired as shown in Figure 3-6 above.
- <6> Install the IE-780233-NS-EM4 in the IE-78K0-NS.

The above steps configure the following circuit and enable supply of the clock from the mounted resonator to the emulation device.

Remark The sections enclosed in broken lines indicate parts that are attached to the parts board.

(b) When using a crystal oscillator

- Items to be prepared
 - Crystal oscillator (see pinouts shown in Figure 3-7)

Figure 3-7. Crystal Oscillator (When Using User-Mounted Clock)

<Steps>

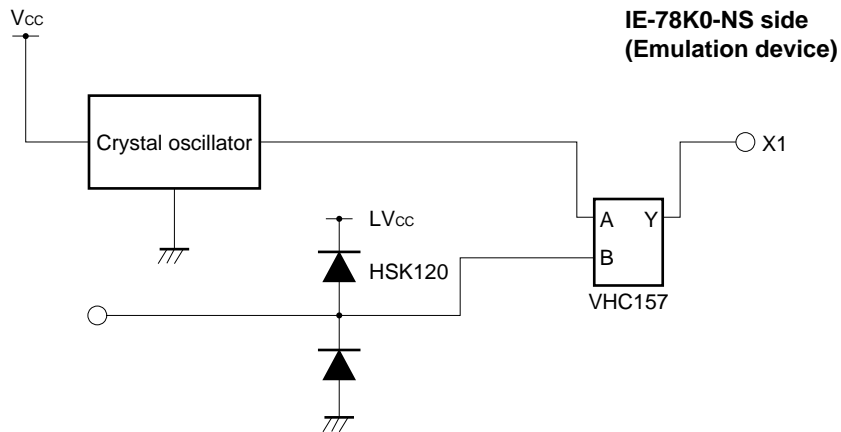

- <1> Prepare the IE-780233-NS-EM4.
- <2> Remove the crystal oscillator that is mounted in the IE-780233-NS-EM4's X1 socket.
- <3> Mount the crystal oscillator prepared by the user in the X1 socket from which the crystal oscillator was removed in <2> above. Insert the crystal oscillator pin into the socket aligning the pins as shown in the figure below.

Figure 3-8. Pin Alignment of Crystal Oscillator and Socket

- <4> Install the IE-780233-NS-EM4 in the IE-78K0-NS.

The above steps configure the following circuit and enable supply of the clock from the mounted resonator to the emulation device.

(3) When using external clock

No hardware settings are required for this situation.

When starting the integrated debugger (ID78K0-NS), open the configuration dialog box and select "External" in the area (Clock) for selecting the CPU's clock source (this selects the user's clock).

3.3 External Trigger

To set up an external trigger, connect it to the IE-780233-NS-EM4's check pins EXTOUT and EXTIN as shown below.

See the **ID78K0-NS User's Manual (U12900E)** for descriptions of related use methods and **IE-78K0-NS User's Manual (U13731E)** for pin characteristics.

Figure 3-9. External Trigger Input Position

3.4 IE-78K0-NS Jumper Settings

When using the IE-780233-NS-EM4, set the jumpers on the IE-78K0-NS as shown in Table 3-2. For details of these jumper settings, refer to the **IE-78K0-NS User's Manual (U13731E)**.

Table 3-2. Jumper Settings on IE-78K0-NS

	JP2	JP3	JP4	JP6	JP7	JP8
Setting	2 to 3 shorted	1 to 2 shorted	1 to 2 shorted	5 to 6 shorted	1 to 2 shorted	3 to 4 shorted

[MEMO]

CHAPTER 4 DIFFERENCES BETWEEN TARGET DEVICES AND TARGET INTERFACE CIRCUITS

This chapter describes differences between the target device's signal lines and the signal lines of the IE-780233-NS-EM4's target interface circuit.

Although the target device is a CMOS circuit, the IE-780233-NS-EM4's target interface circuit consists of emulation circuits such as an emulation gate array, TTL, and CMOS-IC.

When the IE system is connected with the target system for debugging, the IE system performs emulation so as to operate as the actual target device would operate in the target system.

However, some minor differences exist since the operations are performed via the IE system's emulation.

- (1) Signals input/output to/from the emulation gate array and μ PD7880
- (2) Signals input/output to/from the emulation gate array and μ PD7881
- (3) Other signals

The IE-780233-NS-EM4's circuit is used as follows for signals listed in (1) to (3) above.

(1) Signals input/output to/from the emulation gate array and μ PD7880

Refer to **Figure 4-1 Equivalent Circuit of Emulation Circuit 1.**

- ANI3 to ANI0
- P27/ $\overline{\text{SCK3}}$ to P20/ $\overline{\text{SCK1}}$
- AV_{SS}
- AV_{REF} (AV_{DD})
- $\overline{\text{RESET}}$
- X1

(2) Signals input/output to/from the emulation gate array and μ PD7881

Refer to **Figure 4-2 Equivalent Circuit of Emulation Circuit 2.**

- P02/TI to P00/INTP0
- P37/FIP31 to P30/FIP24
- P47/FIP39 to P40/FIP32
- P57/FIP47 to P50/FIP40
- P64/FIP52 to P60/FIP48
- FIP23 to FIP0
- V_{LOAD}

(3) Other signals

Refer to **Figure 4-3 Equivalent Circuit of Emulation Circuit 3.**

- V_{DD0} to V_{DD2}
- V_{SS0}, V_{SS1}
- TEST/V_{PP}
- X2

Figure 4-1. Equivalent Circuit of Emulation Circuit 1

Figure 4-2. Equivalent Circuit of Emulation Circuit 2

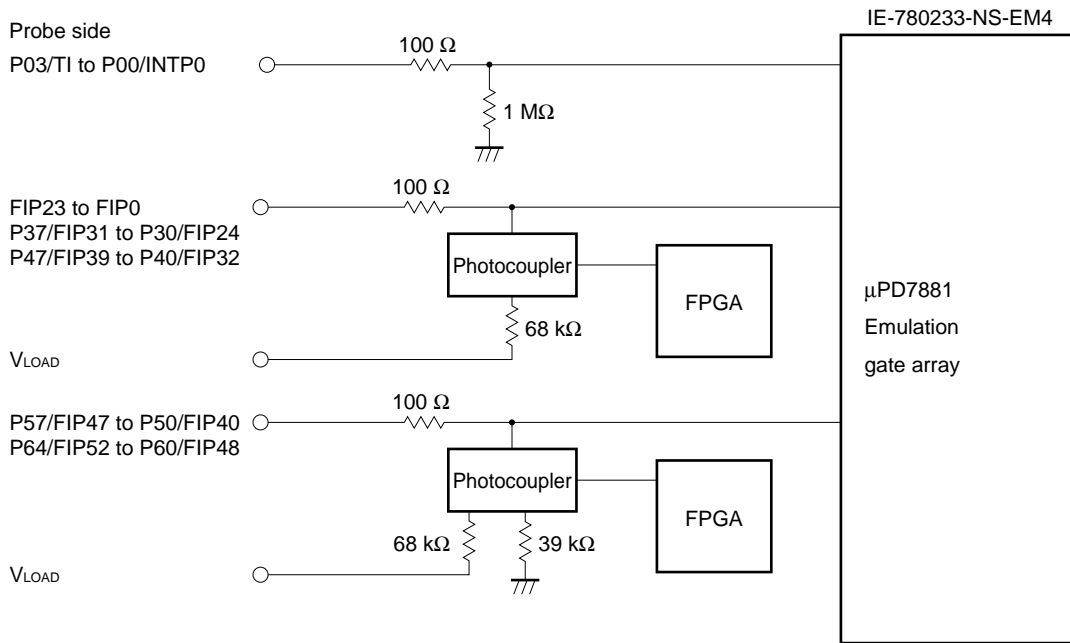

Figure 4-3. Equivalent Circuit of Emulation Circuit 3

[MEMO]

CHAPTER 5 RESTRICTIONS

This chapter describes restrictions in the IE-780233-NS-EM4.

When the IE system is started without connecting the target board, the initial value of each port becomes undefined.

Table 5-1. Initial Value of Each Port

	Emulator	Target CPU
Initial value of each port	Undefined	00H

[MEMO]
