

## Series PVT322PbF

Microelectronic Power IC  
HEXFET® Power MOSFET Photovoltaic Relay  
Dual Pole, Normally Open  
0-250V, 170mA AC/DC

### General Description

The PVT322 Series Photovoltaic Relay is a dual-pole, normally open solid-state relay that can replace electromechanical relays in many applications. It utilizes International Rectifier's HEXFET power MOSFET as the output switch, driven by an integrated circuit photovoltaic generator of novel construction. The output switch is controlled by radiation from a GaAlAs light emitting diode (LED) which is optically isolated from the photovoltaic generator.

Series PVT322 Relays are packaged in an 8-pin, molded DIP package with either thru-hole or surface mount (gull-wing) terminals. It is available in standard plastic shipping tubes or on tape-and-reel. Please refer to Part Identification information opposite.

### Applications

- On/Off Hook switch
