Stainless Steel Systems And Explanations

METAL TIES

PAN-STEEL (MLT Series): Metal Locking Ties, Ball Lock Version in .18" (4.4mm) and .31" (7.9mm) widths

CUSTOM LENGTH BANDING SYSTEM: Ball Lock Version in Reels of 250 ft. (76m) and 1000 ft. (305m); .18" (4.4mm) and .31" (7.9mm) widths

METAL STRAPS

STAINLESS STEEL STRAPS (MS Series): Fold-Over Buckle Design in .375" (9.5mm), .500" (12.7mm) and .625" (15.9mm) widths

CUSTOM LENGTH STRAPPING SYSTEM: Fold-Over Buckle Design Provided in Reels of 200 ft. (61m); .375" (9.5mm), .500" (12.7mm) and .625" (15.9mm) widths

Approvals

 Military Specification MIL-S-23190E	 ISO 9001 REGISTERED FIRM	 LISTED E56854	 ABS PROGRAMS Cert. 99CH18282-X	 United States Coast Guard	
 Bureau Veritas	 Det Norske Veritas	 Lloyd's Register of Shipping	 Germanischer Lloyd	 RINA

PANDUIT PAN-STEEL Stainless Steel Locking Tie

Design Features (MLT Series)

The **PAN-STEEL** system provides a strong, durable method of bundling, identifying and fastening, which can be used in virtually all indoor, outdoor and underground (including direct burial) applications, including applications where severe environmental conditions exist. The ties are designed for use in critical applications where vibration, radiation, weathering, corrosion and temperature extremes are a factor (refer to [page 21](#) for chemical resistance chart).

HIGH STRENGTH

- 100 lb. (445N) and 250 lb. (1112N) minimum loop tensile strengths per Military Standard MIL-S-23190 (refer to [page 20](#) for details); 120 lb. (534N) for the coated cable ties per Military Standard MIL-S-23190 and 600 lb. (2668N) for the double wrapped ties per Military Standard MIL-S-23190

SAFE TO HANDLE

- Rounded sides and smooth surfaces—safe to handle (see below)

FAST INSTALLATION

- Low profile, self-locking tie is easy to thread for fast installation
- No special tools required for installation

MATERIAL

Non-magnetic stainless steel

- 304—most common for typical outdoor applications
- 316—for superior corrosion resistance in salt water and spray applications

TEMPERATURE CAPABILITY

Type 304 – -112°F (-80°C) to 1000°F (538°C)

Type 316 – -112°F (-80°C) to 1000°F (538°C)

Type 321 – -112°F (-80°C) to 1700°F (925°C)

(Refer to [page 20](#) for details.)

Standard Cross Section Ties	Heavy Cross Section Ties
H = .16" (4.1mm)	H = .21" (5.3mm)
Heavy Cross Section Coated Ties	Heavy Cross Section Double Wrapped Ties
H = .235" (6.0mm)	H = .21" (5.7mm)

Contact the factory for registrar and product scope information

Advantages of the Rounded Sides of PAN-STEEL Stainless Steel Ties

Cross sectional view of other manufacturer's tie body. (Photo micrograph shown is magnified 150X.)

Cross sectional view of **PANDUIT** tie body. (Photo micrograph shown is magnified 150X.)

Side view of **PANDUIT** tie.

The **PAN-STEEL** Stainless Steel cable tie is designed for superior comfort and safety when handling due to its fully rounded sides and smooth surfaces. Smooth surfaces and rounded sides assure cable protection and operator safety. **PANDUIT** not only removes the burr, but actually passes the material through a secondary process which removes the top and bottom corners of the material.

PANDUIT PAN-STEEL Stainless Steel Locking Tie (MLT Series)

The unique self-locking design simplifies installation and eliminates any protruding ends when used with **PANDUIT** installation tooling (refer to *pages 8, 9 and 10*) on resilient bundles. Other bundles can be made resilient by the use of PCS cushion sleeving (refer to *page 6*). Two widths are available: .18" (4.4mm) and .31" (7.9mm) both .010" (0.254mm) thick and provide 100 lb. (445N) or 250 lb. (1112N) minimum loop tensile strength per MIL-S-23190. Available in stock lengths for outside bundle diameters up to 14" (356mm). Large lengths can be custom made or use the custom length banding system to provide unlimited lengths (see *page 5* for details).

Exclusive Locking Method

Typical Cable Bundle

Locking Head Cross Section

Unique stainless steel ball locking design allows smooth entry of the tie body for ease of threading. The ball is permanently entrapped in the head portion of the tie. When the tail of the tie is passed through the locking head, the tail is forced upward by the ramp (see drawing) which creates constant contact between the tie and the locking ball. This contact assures locking in any position (upside down, sideways, etc.). When locked on a bundle, the ball, working in conjunction with the angled ramp of the head, provides a positive mechanical wedge locking action. The forces created by this wedging action are so great that mechanical deformation of the tie body occurs at the point of contact between the ball and tie, locking the tie.

Self-Locking Head for Fast Installation

1. Place tie around bundle, put tip through head and pull up tight by hand.

For additional tool information refer to *pages 8, 9 and 10* for details.

2. Use one of the **PANDUIT PAN-STEEL** installation tools to tension and cut off excess tail quickly.

The stainless steel metal locking tie series can be fastened by hand as shown in **Photo 1**. No tools are required. Just place around bundle, pull the tip of the tail through the locking head and pull up tight by hand. The self-locking head secures the tie in place.

Photo 2 shows the metal locking tie series being installed with the **PANDUITGS4MT** tool which automatically tensions and cuts off excess tie. The system provides adjustable tension control and automatic cut-off for quick, consistent and secure installation with the lowest installed cost.

***Refer to [pages 8 & 9](#) and [10](#) for information on installation tools.

Order number of ties required in multiples of Pkg. Qty.

The Patented WAVE FORM Spring in the WAVE-TY

- Tightly clamps on applications where other stainless steel ties will not function
- Retains tension on a solid bundle with minimal applied force
- Tension may be created with a manual tool or **PANDUIT** installation tooling
- Available in Type 304 and 316 stainless steel

Custom Length Banding System MBS and MBH Banding

- For applications that require bundling various bundle diameters
- Supplied in reels of 250 ft. (76m) or 1000 ft. (305m)
- Lets you bundle any size bundle diameter
- To use, pull out as much banding as needed, cut off with **PANDUIT** GS4MT with CAMT accessory (refer to [page 9](#)) or with shears and install with MTHS or MTHH banding heads (shown below)

Part Number	Cross Section	Min. Loop Tensile Strength Lbs. (N *)	Max. Bundle Dia. in. (mm)	Length ft. (m)	Thickness & Width in. (mm)	Recommended Tool**	Recommended Banding Head	Pkg. Qty.

*Per Military Specification ML-S-23190. For additional details, see [page 20](#).

**The GS4MT with CAMT accessory is recommended for cutting the banding. This system provides a straight cut-off which assists in head assembly and eliminates the need for shears. Refer to [pages 8, 9](#) and [10](#) for information on installation tools.

Pkg. -MR = 1000 ft. (305m) reel and -TLR = 250 ft. (76m) reel.

Order number of reels required.

To determine the proper amount of banding required, use the following formula.

To Determine Length of Banding Needed

Calculate	Example: 10 in. (250 mm) Diameter Bundle.
Diameter inches (mm) X 3.14 + 3 inches (76 mm)	10 in. (250 mm) X 3.14 = 31.40 + 3 in. (76 mm + 76 mm) = 34.40 in. or 35 in. of banding (861 mm of banding) required.

MTHS and MTHH Banding Heads

To use, take one end of the cut banding and bend back ½" (13mm). Take a self-locking head and slide it the entire length of the band until it reaches the bend. Bend tail flat against bottom of banding head to complete assembly.

Part Number	Description	Pkg. Qty.	Ctn. Qty.
MTHS-C	Loose piece banding head for standard cross section banding, 304 stainless steel.	100	1000
MTHS-C316	Loose piece banding head for standard cross section banding, 316 stainless steel.	100	1000
MTHH-C	Loose piece banding head for heavy cross section banding, 304 stainless steel.	100	1000
MTHH-C316	Loose piece banding head for heavy cross section banding, 316 stainless steel.	100	1000

Refer to [pages 8, 9](#) and [10](#) for information on installation tools.
Order number of banding heads required in multiples of Pkg. Qty.

Selectively Coated Stainless Steel Cable Ties — MLTC Series

*Per Military Specification MIL-S-23190.

**Base material less coating

***Refer to [pages 8, 9 and 10](#) for information on installation tools.

Order number of ties required in multiples of Pkg. Qty.

These patented ties are designed with a protective coating, smooth surfaces and rounded sides assure cable protection and operator safety. They combine the superior strength and corrosion resistance necessary to withstand even the harshest conditions, such as severe weathering and prolonged exposure to salt spray.

Features and Benefits:

- For communication and electrical cables
- The strength of steel, the protection of nylon; the nylon coating provides protection for the cable
- Available in a loop tensile strength of 120 lbs.
- Base metal is 316 grade stainless steel for excellent resistance to temperature extremes, corrosion, weather, chemicals, salt sprays and UV radiation

Nylon 11 Coating:

- Excellent resistance to chemicals and salt sprays
- Halogen-free with good self-extinguishing properties
- Good in applications at temperatures down to -40°F (-40°C)
- Upper temperature limit 285°F (140°C)
- Coating thickness .002 in. (.050mm) / .006 in. (0.152mm) per side

PCS Cushion Sleeve

Black vinyl sleeving slips on **PAN-STEEL™** steel ties and custom length banding and is used on applications requiring improved gripping on non-resilient objects, separation between dissimilar metals, and added bundle protection. Can be used indoors or outdoors (excellent ultraviolet resistance, good resistance to petroleum and many chemicals).

Provides full separation between the ties and the material to which you are fastening. Instructions are included with the package or available upon request.

MLT5DH-L			5.00(125)	34.0 (863)	.31 (7.9)			

*Per Military Specification MIL-S-23190.

**Refer to [pages 8, 9](#) and [10](#) for information on installation tools.

Order number of ties required in multiples of Pkg. Qty.

Cable tie body wraps around two times entering the locking head twice.

**Double Wrapped
Stainless Steel Cable Ties**

- Double wrapped stainless steel cable ties in 304 material for extra high strength in critical applications
- Double wrapped stainless steel ties allow for tighter tensioning on non-resilient bundles
- Available in .31 in. (7.9 mm) width for bundle diameters ranging from 1 in. (25 mm)– 5 in. (125 mm)
- Loop tensile strength of 600 lbs. (2669 N)
- Self-locking ties—no tools required
- Optional tooling is available to speed installation and lower installed costs (see [pages 8, 9](#) and [10](#))

Double wrapped stainless steel cable ties allow the cable tie body to pass through the locking head two times which provides extra high strength, tighter tension on non-resilient bundles (see photo 1) and a more secure seal on rubber boots (see photo 2).

Installation Tools for All Stainless Steel Cable Ties and Custom Length Banding System

A large selection of state-of-the-art installation tooling allows you to choose the proper tool to meet all your requirements—no matter what your application. These tools are lightweight and easy to operate. Because they are fast and efficient, they speed cable tie installation and lower your total installed cost. The **PANDUIT** PPTMT and GS4MT tools automatically cut off excess tie when the pre-set tension level is reached.

PPTMT (Pneumatic)

Part Number	Description	Pkg. Qty.
PPTMT	Used with all PAN-STEEL™ Type MLT ties, Type MLTC Coated ties, Type MLTDH Double Wrapped ties and WAVE-TY™ Superior Grip ties. <ul style="list-style-type: none"> Automatically tensions and cuts off tie flush* when predetermined tension is reached, providing more reliable and consistent installations. Ideal for high production applications Installs both standard .18 in. (4.4 mm) and heavy .31 in. (7.9 mm) cross section ties with the flip of the knob. (See below.) 	1
PPH10	10 ft. (3 m) hose assembly; 1/8 in. (3.175 mm) NPT male connector	1
PL289N1	Filter regulator	1
KPPTMTG	Replacement gripper kit for PPTMT	1
KPPTMTB	Replacement blade kit for PPTMT	1

*When installing over resilient objects (or made resilient by using PCS cushion sleeve). Order number of pieces required.

Power assisted (pneumatic tool) will automatically tension and cut off excess tie when predetermined tension is reached with the squeeze of a trigger.

Features and Benefits:

- Power assisted tool for fast and effortless installation
- Cable tie side entry for immediate positioning of tie and tool (see photo)
- Controlled tension, fully adjustable
- Automatic cut-off
- One hand operation - lightweight
- Easy removal of excess tie
- Operates on 75 – 85 PSI (517-586 KPA Bar) non-lubricated air and requires no special maintenance

Adjustment Features for PPTMT and GS4MT * Tools

Fast and Easy Selection

The cross-section of the cable tie being installed is clearly indicated on the knob. To change, simply flip knob to proper cross-section indicator.

Tension Indicator

Each cross-section of cable ties can be installed with a variety of tensions to meet the application.

The proper tensions (listed on **PANDUIT** cable tie packages) are clearly marked with this indicator.

To Change the Tension:

Turn clockwise to increase.

Turn counter-clockwise to decrease.

* See [page 9](#) for information on GS4MT installation tool.

Installation Tools for All Stainless Steel Cable Ties and Custom Length Banding System (cont.)

GS4MT

Hand Operated Tool: tool-controlled tension and cut-off. This tool will automatically tension and cut excess tie when predetermined tension is reached with the squeeze of a handle.

Features and Benefits:

- Single handle operation for fast installation
- Cable tie side entry for immediate positioning of tie and tool (See photo)
- Controlled tension, fully adjustable
- Automatic cut-off
- One hand operation - lightweight
- Easy removal of excess tie
- Qualified product listed per Military Standard MS90387-3 and Military Specification MIL-T-81306A

Part Number	Description	Pkg. Qty.
GS4MT	Used with all PAN-STEEL™ Type MLT ties, Type MLTC Coated ties, Type MLTDH Double Wrapped ties and WAVE-TY™ Superior Grip ties. <ul style="list-style-type: none"> • Automatically tensions and cuts off tie flush* when predetermined tension is reached, providing more reliable and consistent installations. • Installs both standard .18 in. (4.4mm) and heavy .31 in. (7.9mm) cross section ties with the flip off of the knob (see page 8). 	1
K4M-BLD	Replacement cutter blade for GS4MT	1
K4MTG	Replacement tension gripper for GS4MT	1
CAMT	Cut-off accessory. Use this accessory with GS4MT tool to cut MBH or MBS continuous banding. Accessory drops in place for use.	1

*When installing over resilient objects (or made resilient by using PCS cushion sleeve). Order number of pieces required.

Accessories

Tool Tension Lock Kit

Certain applications require a locking device on either the selector knob (one cross-section size and tension only) or tension level adjustment (but allowing cross-section size changes). This kit is available for that purpose.

Part Number	Description	Pkg. Qty.
TTLK3-X	Tool Tension Lock Kit Each kit contains (1) #4-40 selection locking screw (with head), (1) selection locking clip, and (1) #4-40 tension locking screw (headless). <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>To lock selector knob and tension level</p> </div> <div style="text-align: center;">  <p>To lock fine adjustment</p> </div> </div>	10

GHH Holster

Part Number	Description	Pkg. Qty.
GHH	Designed to hold PANDUIT GS4MT and ST2MT tools. Can also be used with GS2B, GS4H (series), PPTS, PPTEH, and ST2EH nylon cable tie installation tools. All leather and rivet construction for durability. Extra tie-down strap holds tool in place, easily fits on belt. Used wherever the hand tools are used – construction sites to assembly line for a convenient and handy place for the tool.	1

Order number of holsters required.

Installation Tools for All Stainless Steel Cable Ties and Custom Length Banding System (cont.)

ST2MT

Hand Operated Tool.
Installer controlled tension and cut-off.

Part Number	Description	Pkg. Qty.
ST2MT	<ul style="list-style-type: none"> • Tool tension is controlled by installer. Flush* cut-off is made by twisting the tool. • Rugged, lightweight, easy-to-operate pliers-type tool provides mechanical advantage. • Used with all PAN-STEEL™ type MLT ties, type MLTC coated ties, type MLTDH double wrapped ties and WAVE-TY™ superior grip ties. 	1
KT2MG	KT2MG Replacement Gripper Kit <ul style="list-style-type: none"> • Replaces tension gripper on ST2MT tool. • Can be part of a maintenance program. • Extends life of tool. 	1

*When installing over resilient objects (or made resilient by using PCS cushion sleeve).
Order number of pieces required.

Features and Benefits:

- Single handle trigger for fast installation
- Cable tie side entry for immediate positioning of tie and tool (see photo)
- One hand operation - lightweight
- Installer controlled tension
- Cut-off capability with the twist of the wrist
- Easy removal of excess tie

HTMT

Installer controlled tension.

Part Number	Description	Pkg. Qty.
HTMT	<ul style="list-style-type: none"> • Specially adapted screwdriver type tool is used to tension standard and heavy cross-section ties—safely. • Economical • The coiled tie end remaining after tensional assures a safe end. • Manual tension, no cut-off. • Used with all PAN-STEEL type MLT ties, type MLTC coated ties, type MLTDH double wrapped ties and WAVE-TY superior grip ties. • Installs ties parallel to the bundle. 	1

Order number of tools required.

SBT

SBT Bit only – electric screwdriver not included.

Part Number	Description	Pkg. Qty.
SBT	<ul style="list-style-type: none"> • Tool can be used in any electric screwdriver or nutdriver that accepts 1/4 in. hex bits • Used with all PAN-STEEL type MLT ties, type MLTC coated ties, type MLTDH double wrapped ties and WAVE-TY superior grip ties. • No cut-off – coiled tie end remaining after tensioning. • Installs ties parallel to the bundle. 	1

Order number of tools required.

Stainless Steel, Brass and Aluminum Marker Plates and Tags

- Identify pipes, conduit, valves, cables and equipment in petrochemical plants, pulp and paper mills, refineries, offshore oil rigs and in many other harsh environments.
- All marker plates/tags can be custom marked by **PANDUIT** with one of two computer controlled systems (laser or embosser) to provide permanent identification to resist corrosion, abrasion and radiation (see [page 13](#) for details).
- Use with **PANDUIT PAN-STEEL™** cable ties (refer to [page 4](#) and [5](#)), or with “S” hooks, and beaded chains (refer to [page 15](#)) for fast installation at lowest installed cost.

Most tags are provided with one 1/4 in. (6.35 mm) hole.

*Also used with “S” Hooks or Beaded Chains (refer to [page 15](#) for details).

Galvanic reaction may occur between stainless steel ties and aluminum marker plates in certain environments causing the aluminum to corrode.

Order number of marker plates/tags required in multiples of Pkg. Qty.

Custom Marking Capabilities on PANDUIT PAN-STEEL™ Stainless Steel Cable Ties, Strapping, Metal Marker Plates/Tags and Anodized Aluminum Locks*

PANDUIT stainless steel cable ties, strapping, stainless steel, brass and aluminum marker plates/tags and anodized aluminum locks can be custom marked for identification of equipment, cables, hoses, pipes, conduit, etc. in petrochemical plants, power plants, pulp and paper mills, breweries, and many other applications. PANDUIT's in-house computer controlled custom marking systems provide sharp, crisp, high quality legends. Sequential numbering for serialization is available.

* Anodized aluminum locks can only be marked by the laser system.

LASER MARKING SYSTEM

- Used on all stainless steel cable ties, strapping, metal marker plates/tags and anodized aluminum locks
- Graphics capability and **BOLD** block letters
- Upper and lower case character capability
- Alphanumeric and sequential numbering ability

Character Sizes** Available:

1/8 in. (3.18 mm) 1/4 in. (6.35 mm)
3/16 in. (4.77 mm) 5/16 in. (7.94 mm)
1/2 in. (12.7 mm)

**Other character sizes available. Contact Factory.

EMBOSSING SYSTEM

- Used on metal marker plates and tags which are a maximum of .020 in. (0.5 mm) thick
- Excellent for applications that are exposed to occasional painting and excessive dirt
- Upper case "raised" character capability only
- Alphanumeric and sequential numbering ability

Character Sizes** Available:

1/8 in. (3.18 mm) 3/16 in. (4.77 mm)

For complete product and specification information visit our website at: www.panduit.com
or call: 866-405-6659

Sold exclusively through authorized PANDUIT distributors.

PANDUIT® Metal Marking Devices

Marking Devices Metal Embossing Tape System

System includes hand operated embossing tool and roll of 304 grade stainless steel and aluminum tape.

- Provides job-site versatility
- Can be used with **PAN-STEEL™** ties as a marker plate or a flag marker
- Excellent for on-site applications requiring quick, easy and permanent identification

MTM1H Stainless Steel Mount

Part Number	Used with <i>PAN-STEEL</i> Ties/Strapping	Mounting Method	Dimensions in. (mm)				Pkg. Qty.	Ctn. Qty.
			A	W	H	Z		
MTM1H-C	MLT-S/H, MS375, or MSC375	#8 (4 mm) Screw	.90 (22.6)	.40 (10.2)	.17 (4.37)	.176 (4.4)	100	1000
MTM1H10-C		#10 (5 mm) Screw				.214 (5.4)	100	1000
MTM1H25-C		1/4 in. (6 mm) Screw				.281 (7.1)	100	1000

Provides an entire stainless steel attachment when used with **PANDUIT PAN-STEEL™** steel ties or strapping. The mount has a very low profile to attach cables or bundles at minimum height, and utilizes only one hole for mounting.

Material: 304 stainless steel. Consult factory for additional materials.

Order number of mounts required in multiples of Pkg. Qty.
Stainless steel screws are recommended for fastening to avoid corrosion problems associated with dissimilar metals.

Features:

- Low profile
- One hole mounting

Stainless Steel Push Mount

Push-wing mount is used to secure wires and cables in pre-drilled panels, cabinets, or frames. Can be used when only one side of the panel is accessible. The mount is inserted into a pre-drilled hole and locks in place which speeds installation due to the

elimination of a screw.

Material: 304 stainless steel. Consult factory for additional materials.

Part Number	Used with <i>PAN-STEEL</i> Ties	Mounting Method	Dimensions in. (mm)				Panel Thickness in. (mm)	Pkg. Qty.	Ctn. Qty.
			A	W	H	P

Order number of mounts required in multiples of Pkg. Qty.

Features:

- No tapping required
- Used where only one side of the panel is accessible
- Nothing to assemble

Stainless Steel Push-Button Mount

Push-button mount is used to secure wires and cables in pre-drilled panels, cabinets, or

frames that have access from both sides. Mount is inserted into a pre-drilled hole and locks in place which provides a low profile stainless steel attachment when used with a stainless steel cable tie.

Material: 304 stainless steel. Consult factory for additional materials.

Part Number	Use with <i>PAN-STEEL</i> Ties	Mounting Method	Dimensions in. (mm)			Panel Thickness in. (mm)	Pkg. Qty.	Ctn. Qty.
			A	W	H			
MBM-H25-Q	MLT-S	Inserted into pre-drilled hole .250 in. (6.4 mm)	.40 (10.0)	.20 (5.0)	.26 (6.5)	.031 (0.8) - .125 (3.2)	25	250

Order number of mounts required in multiples of Pkg. Qty.

Features:

- Low profile
- No tapping required
- Designed for use only where both sides of the panel are accessible

Stainless Steel 2-Way Mount

Part Number	Used with PAN-STEEL™ Ties	Dimensions in. (mm)					Mounting Method in. (mm)	Pkg. Qty.	Ctn. Qty.
		A	G	H	Q	Z			
MTM2H-Q	MLT-S/H	.71 (18.0)	.09 (2.3)	.30 (8.0)	.35 (9.0)	.176 (4.5)	#8 (4) screw	25	250

Order number of mounts required in multiples of Pkg. Qty.
Stainless Steel screws are recommended for fastening to avoid corrosion problems associated with dissimilar metals.

- Two-way mount allows stainless steel cable ties to be inserted from either of two sides, providing a low profile attachment with only (1) -hole for maximum holding and stability.
- Material: 304 stainless steel. Consult factory for additional materials.

Features:

- Low profile
- Single hole center mounting for maximum holding and stability
- Maximum screw head height .09 (2.3 mm)

Stainless Steel Bulkhead Mount

Part Number	Used with PAN-STEEL™ Ties	Dimensions in. (mm)			Mounting Method in. (mm)	Panel Thickness in. (mm)	Pkg. Qty.	Ctn. Qty.
		A	W	H				
MTMBH-Q	MLT-S/H	1.92 (48.5)	.21 (5.3)	.54 (13.7)	Pre-drill hole size Standard cross section MLT-S .375 (9.5) – .500 (12.7) Hvy. cross section MLT-H .500 (12.7) – .625 (15.9)	Up to max. .500 (12.7)	25	250

Order number of mounts required in multiples of Pkg. Qty.

- Bulkhead mount is used to secure cables, wires, and hoses to metal framework of trucks, automobiles, control panels, and equipment where one side of the hole is accessible.
- Material: 304 stainless steel. Consult factory for additional materials.

Features:

- Zero profile
- Mounts directly to surface
- Used where only one side of the panel is accessible
- Permanent, secure application

PANDUIT® Stackable Cable Spacers

Telecommunications Installation Products Stackable Cable Spacers

PANDUIT Cable Ties and Spacers are used to separate the support strand from the cable or to separate two cables in aerial lashing applications. The cable ties are available in stainless steel and different types of nylon to meet various environmental conditions. Some nylon cable ties are releasable (type PRT) after installation, which means they can be removed and reused during cable modifications.

Stackable Spacers, SAC S5-T100 and
Stainless Ties, MLT4H-LP

Stackable Cable Spacer

Just one part to inventory. Each spacer snaps by hand into another—increase spacer height by 1/2 in. (12.7 mm) increments. Because there is only one part, on-site sorting is eliminated. Can be used with up to 3/4 in. (19 mm) width (B or C lashed cable supports) in parallel or perpendicular applications.

Part Number	Used With Cable Ties	Dimensions in. (mm)	Material	Color	Where Used	Mounting Methods	Pkg. Qty.	Ctn. Qty.
SACS50-T100	▲ See footnote	2.08 X 1.16 (52.8 X 21.5)	Weather Resistant Polypropylene	Black	Outdoors	Cable Ties	200	2000

Order number of spacers required in multiples of Pkg. Qty.

▲ Stackable spacers may be installed using weather resistant Lashing Ties, weather resistant Light and Heavy Cable Ties, **DURA-TY**™ Cable Ties (see Catalog Cable Ties & Wiring Accessories SA101N275C-WC) and stainless steel cable ties (see [page 4](#)).

Telecommunications Installation Products (Cont.)

Stackable Cable Spacers Overview

Application Features

AERIAL CABLE LASH SUPPORTS

PANDUIT PAN-STEEL™ Stainless Steel Ties are used to fasten cable and/or splice closures to the messenger strand.

FEATURES OF **PAN-STEEL** STAINLESS STEEL TIES

- High Strength
- Long Life
- Weather Resistance
- Chemical Resistance

ADVANTAGES

- +40 years life
- Unaffected by sun, acid rain or most chemicals
- Up to 250 lbs. minimum loop tensile strength
- Single wrap, self locking design

BENEFITS

- Reduced need for periodic rework
- Allows ties to be used in many different conditions
- Strong for use in rugged applications
- Fast and as easy to install as cable ties
- Saves time and lowers installed cost
- Safe to use; will not injure installer's hands or abrade cable insulation

Typical Aerial Lashing Installations

Rigorous Tests and Physical Properties of Stainless Steel Ties

STRENGTH

PANDUIT PAN-STEEL Stainless Steel Ties are tested per the U.S. Military Specification MIL-S-23190, minimum loop tensile test. This test consists of applying a tie to a split mandrel and then measuring the force required to separate the (2) halves until the tie fails. These minimum loop tensile strengths are given for the various products on [pages 4 and 5](#).

PAN-STEEL MLT Part Series	Minimum Loop Tensile Strength
Standard Hvy.	100 lbs. (445 N) 250 lbs. (1112 N)
(MLT) W	200 lbs. (890 N)
(MLTC) Hvy.	120 lbs. (534 N)
(MLTDH) Hvy.	600 lbs. (2669 N)

TEMPERATURE EXTREMES

PANDUIT PAN-STEEL Stainless Steel Ties are 100% stainless steel in the alloy provided (Locking head, locking ball and body all provided from the same grade of material ordered.)

Temperature Ranges for Stainless Steel	
Type 304	-112°F(-80°C) to 1000°F(538°C)
Type 316	-112°F(-80°C) to 1000°F(538°C)
Type 321	-112°F(-80°C) to 1700°F(925°C)

Various temperature tests have been successfully completed. One such test is the U.S. Military Temperature Cycling Test per Thermal Shock Method 107, Test Condition B of MIL-STD-202F. This test exposes the parts from low temperature -85° F (-65° C) to high temperature 275° F (135° C) to low temperature -85° F (-65° C). After exposure, the parts must be free of cracks, distortions, breaks, release of locking device, and meet the minimum loop tensile requirements.

PANDUIT® Stainless Steel Tie Technical Data

Rigorous Tests and Physical Properties of Stainless Steel Ties (cont.)

VIBRATION

PANDUIT PAN-STEEL™ Standard Cross Section ties have passed the U.S. Military random vibration Test Method 214, Test Condition II, Letter J of MIL-STD-202. This test consists of applying parts to a bundle and then vibrating them with random vibration for 8 hours in each of two mutually perpendicular directions. The parts are then subjected to further temperature testing and finally have to pass the minimum loop tensile strength test.

SALT SPRAY

PANDUIT PAN-STEEL Stainless Steel Ties have been subjected to salt spray tests lasting hours without signs of corrosion or reduction in performance.

OUTDOOR EXPOSURE

PANDUIT PAN-STEEL Stainless Steel Ties have been exposed outdoors at New Lenox Illinois, USA since 1985. At the printing of this catalog, there has been no sign of corrosion or loss of performance.

FLUID IMMERSION

PANDUIT PAN-STEEL Stainless Steel Ties were immersed in: 1–Hydraulic Fluid, 2–Turbine Fuel, 3–Lubricating Oil, and 4–Isopropyl Alcohol for (4) hours at temperatures of 122° F (50° C). Per U.S. Military Specification MIL-S-23190E, the parts were then subjected to and passed the minimum loop tensile test.

RADIATION

Installed cable ties of various materials have been exposed to different amounts of radiation to determine the maximum acceptable limit. These tests were conducted by **PANDUIT** to determine the acceptability for use in various areas of nuclear power plants (accumulated over 40 year life). Radiation resistance is 2X10⁸ rads.

PANDUIT® Stainless Steel Strapping System

PANDUIT PAN-STEEL™ Stainless Steel Strapping System

The **PANDUIT PAN-STEEL** stainless steel strapping system reduces installation time and leaves no sharp edges.

- 3 widths available: 3/8 in. (9.5 mm), 1/2 in. (12.7 mm), and 5/8 in. (15.9 mm)
- Burr-free sides
- Non-magnetic 304 stainless steel
- Designed for use in critical applications where radiation, weathering, corrosion, and temperature extremes are a concern
- Temperature range: -112° F (-80° C) to 1000° F (538° C)
- Fast and reliable alternative to wing seals

Unique Patented Locking Method

Buckle design provides a low finished profile

After tensioning, cut end is locked inside buckle—no exposed sharp edge

The PANDUIT Method Reduces Installation Time

1. Place strap around the material, insert tail of strap through buckle. Pull strapping tight and bend up to hold in place. Insert tail of strapping into tool nose section. Squeeze handles to tension.

2. Once proper tension is reached, maintain tension and raise tool 90° - 120° over buckle and turn parallel with the bundle, cutting strap. Remove tool, press cut end down and toward retaining tab.

3. Using the closure lever on the handle of the tool, bend retaining tab down and over cut end. Provides finished, safe, low profile closure.

Order number of straps required in multiples of Pkg. Qty.

Features:

- Buckle design provides a low finished profile.
- After tensioning, cut end is locked inside buckle—no sharp edges.
- Buckle locked in place—won't slip down strap.

Custom Length Strapping System

For applications that require various bundle diameters or outside bundle diameters larger than 10 in. (254 mm). Supplied in reels of 200 ft. (61 m), lets you bundle any size diameter. To use, pull out as much as needed, cut off with shears and install with MSB buckle. The buckle is installed by taking one end of cut strapping and bending it back 1/2 in. (13 mm). Take a buckle and slide it the entire length of strap until it reaches the bend. Bend tail flat against bottom of strapping head to complete assembly. The system provides job-site versatility with minimum inventory.

Standard Material: AISI 304 non-magnetic stainless steel AISI 316 material available upon request. Contact factory for details. Minimum bundle diameter 1.50 in. (38 mm).

*Base material before coating

Order number of straps required, in multiples of Pkg. Qty.

Features:

- After tensioning cut end is locked inside buckle - no exposed sharp edge
- Buckle locked in place - won't slip down strap

Nylon 11 Coating

- 100% coated with Black Nylon 11, coating thickness .003 in. (0.07mm) / .005 in. (0.13mm) per side
- Halogen-free with good self-extinguishing properties
- Good in applications at temperatures down to -40°F (-40°C)
- Excellent resistance to chemicals and salt sprays
- Upper temperature limit 285°F (140°C)

Installation Tool for Strapping (MS Series)

BT2MS75

Hand Operated Tool. Installer controlled tension and cut-off.

Part Number	Description	Pkg. Qty.
BT2MS75	Installation tool. Used for all widths of PANDUIT PAN-STEEL strapping. <ul style="list-style-type: none"> • Durable tool tensions, cuts strapping, and secures the buckle tab. • Narrow, lightweight—allows one hand operation in otherwise difficult areas to install. • Pliers-type tool provides mechanical advantage for tensioning. • Easy to operate. 	1
BT2N75	Replacement nose section for BT2MS75 tool. <ul style="list-style-type: none"> • Provides the economy of repair vs. total tool replacement. • Easy to install on tool. 	1
KT2MG	Replacement tension gripper for BTMS75 tool. <ul style="list-style-type: none"> • Easy to install on tool. 	1

Order number of pieces required.

Features:

- Strap side entry (See photo)
- One hand tensioning and cut-off operation - lightweight
- Installer controlled tension
- Cut-off with the twist of the wrist
- Easy removal of excess strap
- Installs all (3) sizes: 3/8 in. (9.5mm), 1/2 in. (12.7mm), and 5/8 in. (15.9mm)

PANDUIT PAN-STEEL Applications

AIRCRAFT

PANDUIT PAN-STEEL Type MLT Stainless Steel Ties are used to fasten thermal insulation blankets to jet engine manifolds and tubes.

PRIMARY BENEFIT

Installation tooling with controlled tension and auto cut-off capability (PPTMT & GS4MT) significantly reduces cost of installation and the low weight, high strength of the ties makes them more efficient and reliable than conventional fasteners. The stainless steel ties have been temperature tested to over 1000° F (538° C) to provide excellent continuous service over the entire temperature range and to provide long life.

AIRCRAFT

PANDUIT PAN-STEEL Stainless Steel Ties are used to secure insulation envelopes to ducting in aircraft fuselages.

PRIMARY BENEFIT

The ties have been tested to over 1000° F (538° C) which provides excellent continuous service over the entire operating range and the single wrap, self-locking low weight design provides improved efficiency and reliability.

TRUCK ENGINES

PANDUIT PAN-STEEL Stainless Steel Ties are used to fasten thermal insulation blankets to truck engine exhaust pipes.

PRIMARY BENEFIT

The ties provide high strength, low profile and low weight design which are more efficient than conventional fasteners and are temperature tested to over 1000° F (538° C) for performance under continuous high temperature conditions.

AUTOMOTIVE

PANDUIT PAN-STEEL Ties are used to fasten constant velocity (CV) boots on front wheel drive automobiles.

PRIMARY BENEFIT

The ties can be installed without disassembling the constant velocity (CV) joint which saves installation time and lowers installed costs. The stainless steel ties provide excellent weather resistance and corrosion resistance for long life with high strength and low weight.

TELECOMMUNICATIONS

PANDUIT PAN-STEEL Ties are used to securely fasten cables to telecommunication towers.

PRIMARY BENEFIT

The ties provide long life, corrosion and chemical resistance in harsh environments and temperature extremes. The self-locking design provides fast and easy installation, state-of-the-art tooling further reduces installation time.

PANDUIT PAN-STEEL Applications (Cont.)

AUTOMOTIVE

PANDUIT PAN-STEEL WAVE-TY™ Stainless Steel Ties and the GS4MT manual installation tool are used to fasten heat shields on automotive exhaust manifold assemblies.

PRIMARY BENEFIT

Manual and pneumatic installation tooling with controlled tension and automatic cut-off capability speeds installation time and lowers installed costs. The **WAVE-TY** retains tension on a solid bundle where other stainless steel ties will not function.

MAINTENANCE AND REPAIR (MRO)

PANDUIT PAN-STEEL Stainless Steel Ties are used to fasten **PANDUIT** pipe markers in pulp and paper mills, refineries, power plants and breweries.

PRIMARY BENEFIT

The ties provide extended service life which reduces the need for periodic rework and the single wrap self-locking design provides fast and easy installation. The stainless steel ties provide excellent chemical resistance in harsh environments and in high temperature extremes.

MAINTENANCE AND REPAIR (MRO)

PANDUIT Custom Marked Marker Plates attached with **PAN-STEEL** Ties are used to identify conduit and circuits in petrochemical plants, pulp and paper mills, refineries, and breweries.

PRIMARY BENEFIT

The products are marked to meet customer specifications with one of two computer controlled systems (laser or embosser) which provides permanent identification to resist corrosion, abrasion, and radiation in harsh environments.

PETROCHEMICAL PROCESSING

PANDUIT PAN-STEEL Ties, Strapping and Marker Plates are used in chemical plants to bundle cables to cable trays and to identify conduit and cables.

PRIMARY BENEFIT

The ties provide long life, corrosion resistance and high temperature extremes and allow the ties to be used in many different applications.

NUCLEAR PLANTS

PANDUIT PAN-STEEL Stainless Steel Ties are used to secure heat trace cable and replace wing seal strapping methods. A complete selection of state-of-the-art tooling makes installation quicker and easier and reduces the amount of exposure time for plant maintenance personnel in containment areas.

PRIMARY BENEFIT

The ties have high radiation resistance (2X10⁸ RAD) for excellent use in containment areas.

PANDUIT PAN-STEEL Applications (Cont.)

TRAFFIC SIGNALS

PANDUIT PAN-STEEL Stainless Steel Ties are used for bundling and fastening cables to messenger strand in traffic signal applications.

PRIMARY BENEFIT

The ties provide a 40 year life which reduces the need for periodic rework and have smooth fully radiused sides which are safe to use and will not injure installer's hands or abrade cable insulation.

AERIAL SUPPORT

PANDUIT PAN-STEEL Stainless Steel Ties are used to fasten cable and/or splice closures to the messenger strand in aerial support applications.

PRIMARY BENEFIT

The ties provide a 40 year life which reduces the need for periodic rework and are unaffected by sun, acid rain, or most chemicals which allows them to be used in many different environments.

OFFSHORE OIL

PANDUIT PAN-STEEL 316 Grade Stainless Steel Cable Ties, Straps, and Nylon 11 Coated Straps are used to fasten cables and hoses on offshore platforms.

PRIMARY BENEFIT

They provide superior corrosion protection in salt spray environments which extends service life and reduces need for periodic rework.

SHIPBUILDING

PANDUIT PAN-STEEL Stainless Steel Cable Ties are used to fasten cables to cable trays and cable hangers in shipbuilding applications.

PRIMARY BENEFIT

The ties provide extended service life which reduces the need for periodic rework, are non-flammable so no toxic or harmful gases are released in case of fire and have fully rounded sides which are safe to use and will not injure installer's hands or abrade cable insulation.

RAILROAD

PANDUIT PAN-STEEL Stainless Steel Ties are used to bundle, fasten, and secure cables and hoses on trains, especially in exposed areas underneath engines and cars that are subjected to harsh environmental conditions. Ties have passed Japanese Industry Standard for salt spray (JIS-C-5028) and vibration (JIS-C-4031).

PRIMARY BENEFIT

The ties provide high strength with low weight and low profile for improved efficiency and reliability and also extended service life which reduces the need for periodic rework.
