NOTES:

- The maximum volt- μ sec rating limits the peak flux density to 2200 Gauss when used in a unipolar drive application. For bi-polar drive applications a maximum volt- μ sec of two times this rating is acceptable (ie: 2* (volt* μ sec rating) Volt* μ sec = (voltage applied to the primary) * dutycycle / Frequency = V * alpha / Freq_Hz = V * μ sec
- Leakage inductance is measured at primary terminals with all secondaries shorted.
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PA2002NL becomes PA2002NLT). Pulse complies to industry standard tape and reel specification EIA481.
- The "NL" suffix indicates an RoHS-compliant part number.
- The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
