

Product Bulletin

Surface Mount Ceramic Chip Capacitors High Temperature 200°C COG MLCC

Benefits and Features:

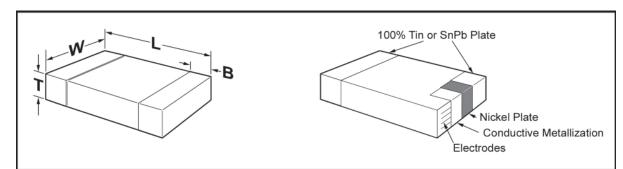

No Piezoelectric Noise. Extremely low ESR and ESL. High Thermal Stability. High Ripple Current Capability. Preferred capacitance solution at line frequencies and into the MHz range. No capacitance change with respect to applied rated DC voltage. Minimal capacitance change with respect to temperature from -55°C to +200°C. No capacitance decay with time. Non-polar device.

Applications: Typical applications include critical timing, tuning, circuits requiring low loss, circuits with pulse, high current, decoupling, by-pass, filtering, transient voltage suppression, blocking and energy storage for use in extreme environments commonly present in applications such as down-hole exploration, aerospace engine compartments and geophysical probes.

KEMET's New High Temperature Surface Mount COG MLCCs feature a robust and proprietary base metal dielectric system that offers industry-leading performance relative to capacitance and case size combined with capacitance stability at extreme temperatures up to +200°C. This new platform promotes downsizing opportunities of existing High Temperature C0G technology, and offers replacement opportunities of existing X7R/BX/ BR technologies.

Standard capacitance ratings for these devices range from 0.5 pF up to 0.22 µF in capacitance tolerance offerings of ±0.25pF, ±0.5pF, ±1%, ±2%, ±5%, ±10%, or ±20%. The Temperature Coefficient of Capacitance (TCC) is ±30ppm/°C from -55°C to +200°. Devices are available in DC voltage ratings of 10V, 16V, 25V, 50V and 100V, with a maximum dissipation factor of 0.10%. Seven standard EIA case size options are available which include -0603, 0805, 1206, 1210, and 1812- with either nickel barrier/tin or Sn/Pb terminations.

Outline Drawing

Dimensions - Millimeters (Inches)

EIA SIZE CODE	METRIC SIZE CODE	L LENGTH	W WIDTH	B BANDWIDTH	S SEPARATION minimum
0603	1608	1.6 (.063) ± .15 (.006)	0.8 (.032) ± .15 (.006)	0.35 (.014) ± .15 (.006)	0.7 (.028)
0805	2012	2.0 (.079) ± .20 (.008)	1.25 (.049) ± .20 (.008)	0.50 (.020) ± .25 (.010)	0.75 (.030)
1206	3216	3.2 (.126) ± .20 (.008)	1.6 (.063) ± .20 (.008)	0.50 (.020) ± .25 (.010)	N/A
1210	3225	3.2 (.126) ± .20 (.008)	2.5 (.098) ± .20 (.008)	0.50 (.020) ± .25 (.010)	N/A
1812	4532	4.5 (.177) ± .30 (.012)	3.2 (.126) ± .30 (.012)	0.60 (.024) ± .35 (.014)	N/A

*Contact KEMET for availability and ordering details if you require additional reeling or packaging options. Additional termination options may be available, contact KEMET for details.

Electrical Parameters/Characteristics

Operating Temperature Range:	-55°C to +200°C
Temperature Coefficient of Capacitance :	±30PPM/°C (up to 200°C)
Aging Rate (Max % Cap Loss/Decade Hour):	0%
Dielectric Withstanding Voltage:	250%
Dissipation Factor (DF) @ 25°C:	.001 (0.10%) Max
Insulation Resistance (IR) Limit @ 25°C: Insulation Resistance (IR) Limit @ 200°C:	

Capacitance and Dissipation Factor (DF) measured under the following conditions: 1kHz and 1 Vrms if capacitance >1000pF

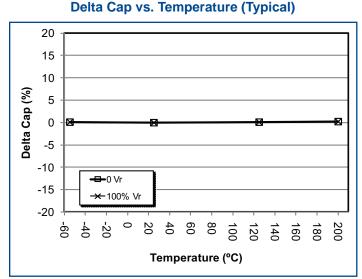

1MHz and 1 Vrms if capacitance ≤1000pF

Qualification/Certification

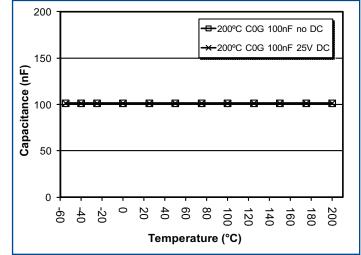

RoHS-PRC (6/6) - 100% matte Sn termination

Product Qualification Test Plan								
RELIABILITY/ ENVIRONMENTAL TESTS per MIL-STD-202/JESD22								
High Temperature Life 200°C, Rated Voltage, 2000 Hours.								
Load Humidity 85°C /85%RH, Rated Voltage, 1000 Hours.								
Low Voltage Humidity	85°C /85%RH, 1.5V, 1000 Hours.							
Temperature Cycling	-55°C to +200°C, 50 Cycles.							
Thermal Shock	-55°C to +150°C, 20s transfer, 15 min dwell, 300 Cycles.							
Moisture Resistance	Cycled Temp / RH. 0V, 10 cycles @ 24 Hrs each.							
PHYSICAL	, MECHANICAL & PROCESS TESTS per MIL-STD 202/JIS-C-6429							
Resistance to Solvents	Include Aqueous wash chemical - OKEM Clean or equivalent.							
Mechanical Shock and Vibration	Method 213: Figure 1, Condition F Method 204: 5 gs for 20 min,12 cycles.							
Restistance to Soldering Heat	Condition B, no pre-heat of samples, Single Wave Solder.							
Terminal Strength	Force of 1.8 kg for 60 seconds.							
Board Flex	3mm minimum.

Thickness Code Reference Chart Packaging Quantity Based on Finished Chip Thickness Specifications

Soldering Process

All parts incorporate the standard KEMET barrier layer of pure nickel, with an overplate of pure tin to provide excellent solderability as well as resistance to leaching.

HMP solders ,e.g., Pb94, are recommended for high temperature applications.

Marking

These chips will be supplied unmarked. If required, they can be laser-marked as an extra option. Details on the marking format are included in KEMET Surface Mount catalog F3102.

In general, the information in the KEMET Surface Mount catalog F3102 applies to these capacitors. The information in this bulletin supplements that in the catalog.
