Memory Map

The MC68HC08JL8 has 8,192 bytes of user ROM from \$DC00 to \$FBFF, and 36 bytes of user ROM vectors from \$FFDC to \$FFFF. On the MC68HC908JL8, these memory locations are FLASH memory.

Figure 2 shows the memory map of the MC68HC08JL8.

MC68HC08JL8.

On the MC68HC908JL8, these two locations are the FLASH control register

and the FLASH block protect register respectively.

Mask Option Register

HC908JL8AD/D

The mask option register at \$FFD0 is read only. The value is defined by mask

option (hard-wired connections) specified at the time as the ROM code

submission.

On the MC68HC908JL8, the MOR is implemented as a FLASH, which can be

programmed, erased, and read.

Monitor ROMThe monitor program (monitor ROM: \$FE10–\$FFCE) on the MC68HC08JL8 is

for device testing only. \$FC00-\$FDFF are unused.

Electrical Electrical specifications for the MC68HC908JL8 apply to the MC68HC08JL8,

Specifications except for the parameters indicated below.

DC Electrical Characteristics

- 3. The numbers in parenthesis are MC68HC908JL8 values.

Keyboard Interrupt

Page 243, *Figure 15-2. Keyboard Interrupt Block Diagram* — Replace with the following block diagram:

Computer Operating Properly (COP)

Page 254, *16.8.2 Stop Mode* — Replace the two paragraphs:

From:

Stop mode turns off the ICLK input to the COP if the STOP_ICLKDIS bit is set in configuration register 2 (CONFIG2). Service the COP immediately before entering or after exiting stop mode to ensure a full COP timeout period after entering or exiting stop mode.

After reset, the STOP_ICLKDIS bit is clear by default and ICLK is enabled during stop mode.

To: Stop mode turns off the ICLK input to the COP and clears the COP prescaler. Service the COP immediately before entering or after exiting stop mode to ensure a full COP timeout period after entering or exiting stop mode.

To prevent inadvertently turning off the COP with a STOP instruction, a configuration option is available that disables the STOP instruction. When the STOP bit in the configuration register has the STOP instruction is disabled, execution of a STOP instruction results in an illegal opcode reset.
