

# FEATURES

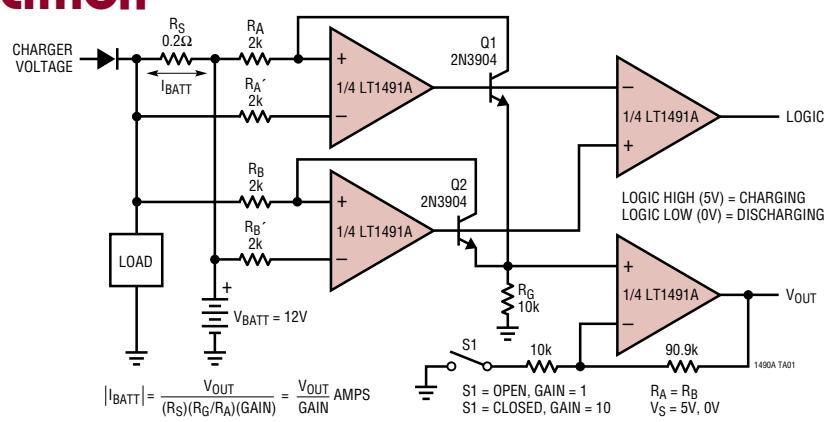

- Low Input Offset Voltage:  $500\mu\text{V}$  Max
  - Output Swings to  $10\text{mV}$  Max from  $V^-$
  - Rail-to-Rail Input and Output
  - Micropower:  $50\mu\text{A}/\text{Amplifier}$  Max
  - Over-The-Top® Input Common Mode Range Extends  $44\text{V}$  Above  $V^-$ , Independent of  $V^+$
  - Specified on  $3\text{V}$ ,  $5\text{V}$  and  $\pm 15\text{V}$  Supplies
  - High Output Current:  $20\text{mA}$
  - Output Drives  $10,000\text{pF}$  with Output Compensation
  - Reverse Battery Protection to  $18\text{V}$
  - No Supply Sequencing Problems
  - High Voltage Gain:  $1500\text{V/mV}$
  - High CMRR:  $98\text{dB}$
  - No Phase Reversal
  - Gain Bandwidth Product:  $200\text{kHz}$
  - Tiny  $3\text{mm} \times 3\text{mm} \times 0.8\text{mm}$  DFN Package

## APPLICATIONS

- Battery- or Solar-Powered Systems
    - Portable Instrumentation
    - Sensor Conditioning
  - Supply Current Sensing
  - Battery Monitoring
  - Micropower Active Filters
  - 4mA to 20mA Transmitters

## **TYPICAL APPLICATION**

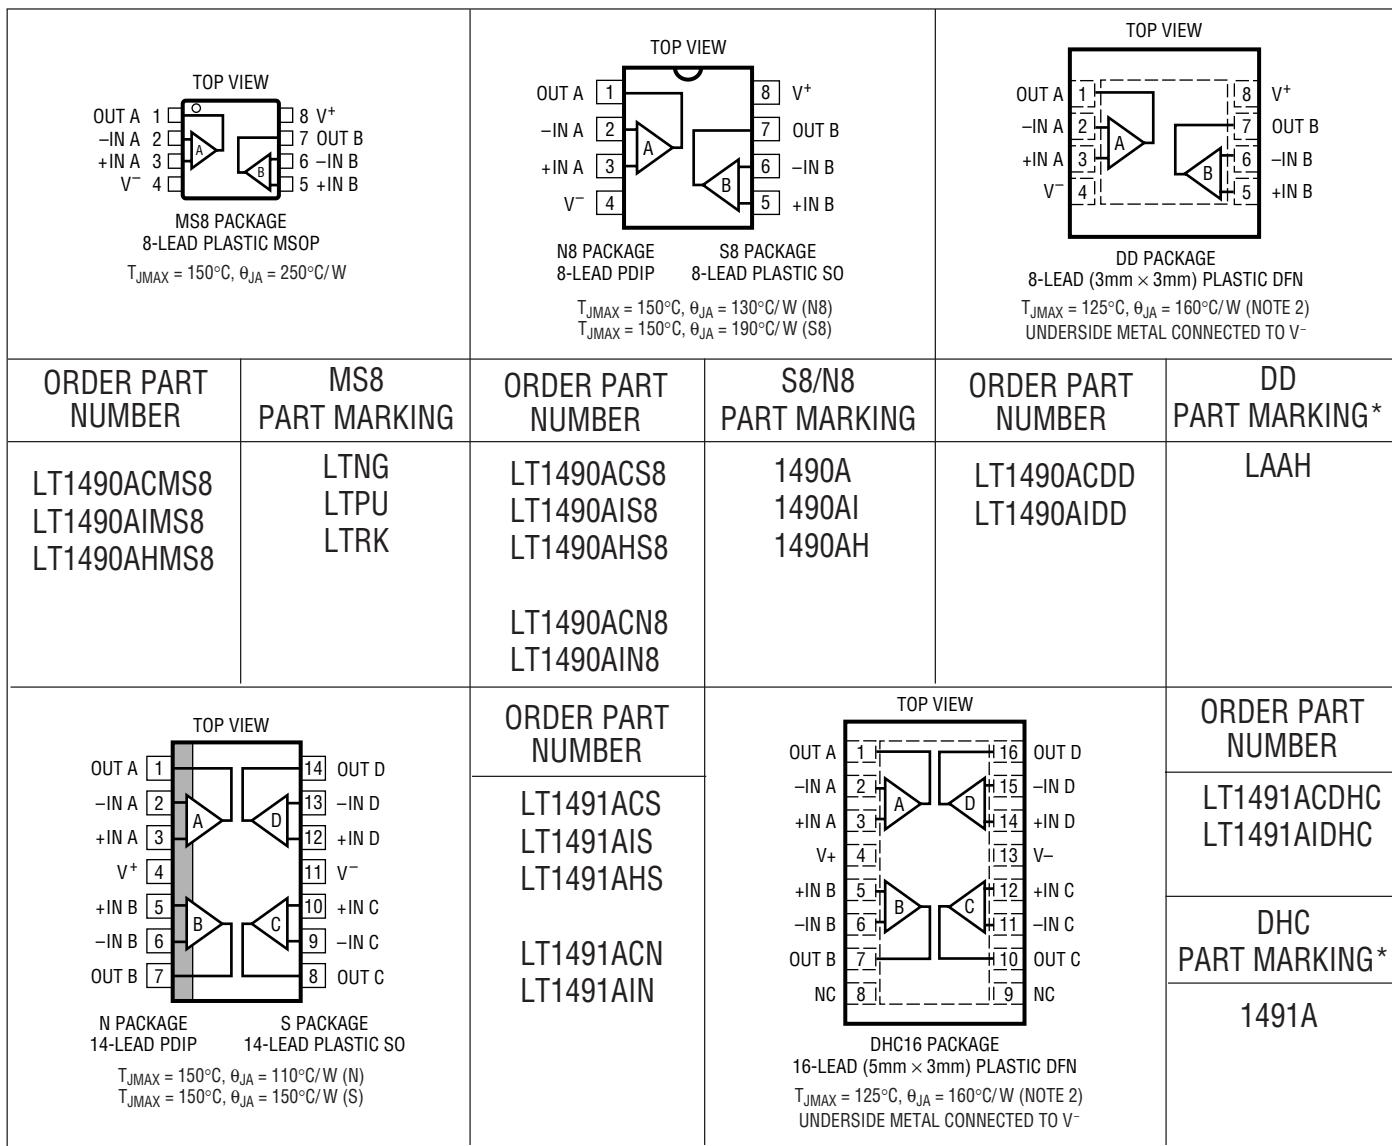

sn1490, 14901afbs

# LT1490A/LT1491A

## **ABSOLUTE MAXIMUM RATINGS** (Note 1)

Total Supply Voltage ( $V^+$ to $V^-$ ) .....	44V	Specified Temperature Range (Note 4)	
Differential Input Voltage .....	44V	LT1490AC/LT1490AI .....	-40°C to 85°C
Input Current (Note 9) .....	$\pm 12\text{mA}$	LT1491AC/LT1491AI .....	-40°C to 85°C
Output Short-Circuit Duration (Note 2) .....	Continuous	LT1490AH/LT1491AH .....	-40°C to 125°C
Operating Temperature Range (Note 3)		Junction Temperature .....	150°C
LT1490AC/LT1491AC .....	-40°C to 85°C	Junction Temperature (DD/DHC Package) .....	125°C
LT1490AI/LT1491AI .....	-40°C to 85°C	Storage Temperature Range .....	-65°C to 150°C
LT1490AH/LT1491AH .....	-40°C to 125°C	Storage Temperature Range	
		DD/DHC Package .....	-65°C to 125°C
		Lead Temperature (Soldering, 10 sec) .....	300°C

## **PACKAGE/ORDER INFORMATION**

\*Temperature grades are identified by a label on the shipping container. Consult LTC Marketing for parts specified with wider operating temperature ranges.

**Note 1:** Absolute Maximum Ratings are those values beyond which the life of the device may be impaired.

**Note 2:** A heat sink may be required to keep the junction temperature below absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted. The  $\theta_{JA}$  specified for the DD and DHC package is with minimal PCB heat spreading metal. Using expanded metal area on all layers of a board reduces this value.

**Note 3:** The LT1490AC/LT1491AC and LT1490AI/LT1491AI are guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LT1490AH/LT1491AH are guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

**Note 4:** The LT1490AC/LT1491AC are guaranteed to meet specified performance from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ . The LT1490AC/LT1491AC are designed, characterized and expected to meet specified performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  but are not tested or QA sampled at these temperatures. The

LT1490AI/LT1491AI are guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LT1490AH/LT1491AH are guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

**Note 5:** ESD (Electrostatic Discharge) sensitive device. Extensive use of ESD protection devices are used internal to the LT1490A/LT1491A. However, high electrostatic discharge can damage or degrade the device. Use proper ESD handling precautions.

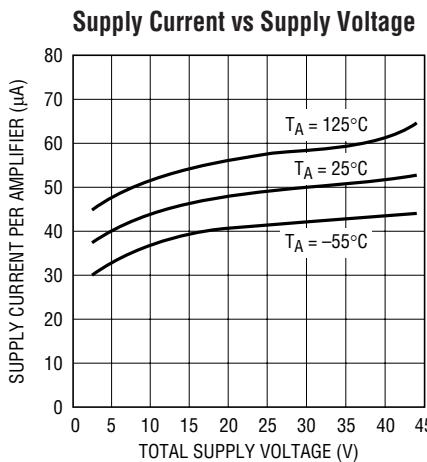

**Note 6:**  $V_S = 5\text{V}$  limits are guaranteed by correlation to  $V_S = 3\text{V}$  and  $V_S = \pm 15\text{V}$  tests.

**Note 7:**  $V_S = 3\text{V}$  limits are guaranteed by correlation to  $V_S = 5\text{V}$  and  $V_S = \pm 15\text{V}$  tests.

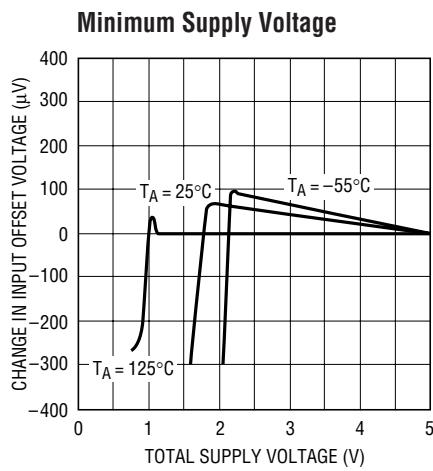

**Note 8:** Guaranteed by correlation to slew rate at  $V_S = \pm 15\text{V}$  and GBW at  $V_S = 3\text{V}$  and  $V_S = \pm 15\text{V}$  tests.

**Note 9:** This parameter is not 100% tested.

## APPLICATIONS INFORMATION

### Supply Voltage

The positive supply pin of the LT1490A/LT1491A should be bypassed with a small capacitor (about  $0.01\mu F$ ) within an inch of the pin. When driving heavy loads an additional  $4.7\mu F$  electrolytic capacitor should be used. When using split supplies, the same is true for the negative supply pin.

The LT1490A/LT1491A are protected against reverse battery voltages up to 18V. In the event a reverse battery condition occurs, the supply current is less than 1nA.

The LT1490A/LT1491A can be shut down by removing  $V^+$ . In this condition the input bias current is typically less than 0.5nA, even if the inputs are 44V above the negative supply.

When operating the LT1490A/LT1491A on total supplies of 20V or more, the supply must not rise to its final voltage in less than  $1\mu s$ . This is especially true if low ESR bypass capacitors are used. A series RLC circuit is formed from the supply lead inductance and the bypass capacitor. A resistance of  $7.5\Omega$  in the supply or in the bypass capacitor will dampen the tuned circuit enough to limit the rise time.

### Inputs

The LT1490A/LT1491A have two input stages, NPN and PNP (see the Simplified Schematic), resulting in three distinct operating regions as shown in the Input Bias Current vs Common Mode typical performance curve.

For input voltages about 0.8V or more below  $V^+$ , the PNP input stage is active and the input bias current is typically  $-1nA$ . When the input voltage is about 0.5V or less from  $V^+$ , the NPN input stage is operating and the input bias current is typically  $25nA$ . Increases in temperature will cause the voltage at which operation switches from the PNP stage to the NPN stage to move towards  $V^+$ . The input offset voltage of the NPN stage is untrimmed and is typically  $600\mu V$ .

A Schottky diode in the collector of each NPN transistor of the NPN input stage allows the LT1490A/LT1491A to operate with either or both of their inputs above  $V^+$ . At about 0.3V above  $V^+$  the NPN input transistor is fully saturated and the input bias current is typically  $3\mu A$  at room temperature. The input offset voltage is typically  $700\mu V$  when

operating above  $V^+$ . The LT1490A/LT1491A will operate with their inputs 44V above  $V^-$  regardless of  $V^+$ .

The inputs are protected against excursions as much as 15V below  $V^-$  by an internal 1k resistor in series with each input and a diode from the input to the negative supply. There is no output phase reversal for inputs up to 15V below  $V^-$ . There are no clamping diodes between the inputs and the maximum differential input voltage is 44V.

### Output

The output voltage swing of the LT1490A/LT1491A is affected by input overdrive as shown in the typical performance curves.

The output of the LT1490A/LT1491A can be pulled up to 18V beyond  $V^+$  with less than 1nA of leakage current, provided that  $V^+$  is less than 0.5V.

The normally reverse-biased substrate diode from the output to  $V^-$  will cause unlimited currents to flow when the output is forced below  $V^-$ . If the current is transient and limited to 100mA, no damage will occur.

The LT1490A/LT1491A are internally compensated to drive at least 200pF of capacitance under any output loading conditions. A  $0.22\mu F$  capacitor in series with a  $150\Omega$  resistor between the output and ground will compensate these amplifiers for larger capacitive loads, up to 10,000pF, at all output currents.

### Distortion

There are two main contributors of distortion in op amps: output crossover distortion as the output transitions from sourcing to sinking current and distortion caused by nonlinear common mode rejection. Of course, if the op amp is operating inverting there is no common mode induced distortion. When the LT1490A/LT1491A switch between input stages there is significant nonlinearity in the CMRR. Lower load resistance increases the output crossover distortion, but has no effect on the input stage transition distortion. For lowest distortion the LT1490A/LT1491A should be operated single supply, with the output always sourcing current and with the input voltage swing between ground and  $(V^+ - 0.8V)$ . See the Typical Performance Characteristics curves.

## APPLICATIONS INFORMATION

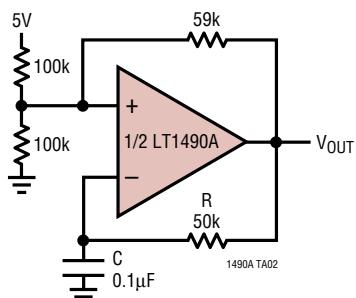

### Gain

The open-loop gain is almost independent of load when the output is sourcing current. This optimizes performance

in single supply applications where the load is returned to ground. The typical performance photo of Open-Loop Gain for various loads shows the details.

## TYPICAL APPLICATIONS

### Square Wave Oscillator

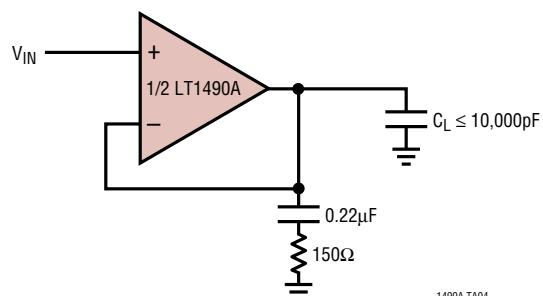

$$f = \frac{1}{2RC}$$

$V_{OUT} = 5V_{P-P}$  WITH 5V SUPPLY

$I_S = 200\mu A$

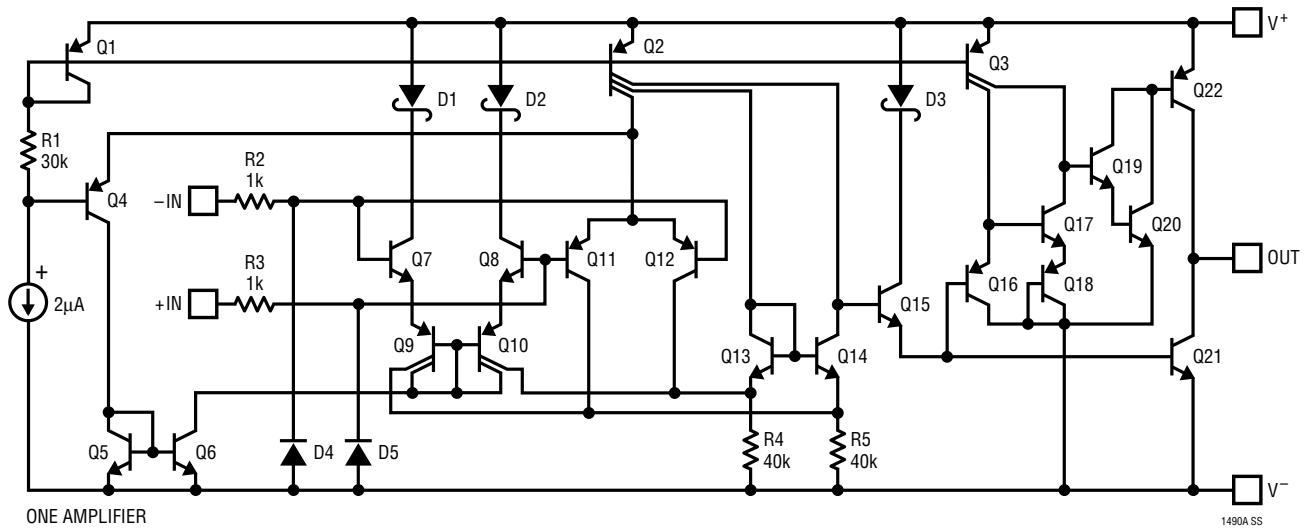

AT  $V_S = 5V$ ,  $R = 50k$ ,  $C = 1nF$   
OUTPUT IS 5kHz SLEW LIMITED TRIANGLE WAVE

### Optional Output Compensation for Capacitive Loads Greater Than 200pF

## PACKAGE DESCRIPTION

## PACKAGE DESCRIPTION

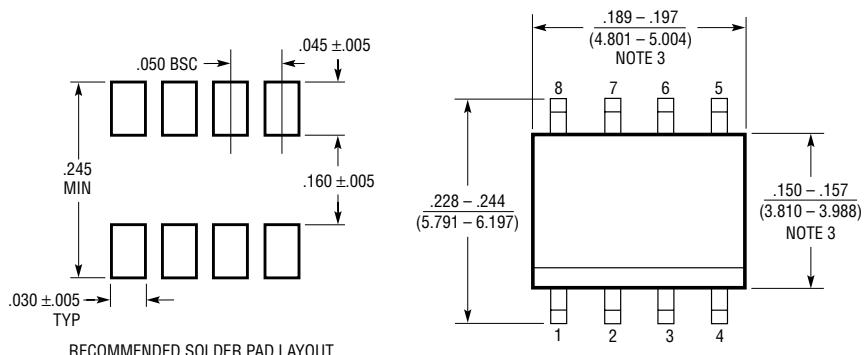

**N8 Package**  
**8-Lead PDIP (Narrow .300 Inch)**  
(Reference LTC DWG # 05-08-1510)

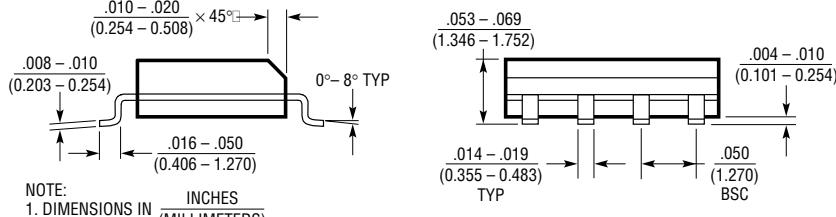

NOTE:  
1. DIMENSIONS ARE INCHES  
MILLIMETERS

\*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

**S8 Package**  
**8-Lead Plastic Small Outline (Narrow .150 Inch)**  
(Reference LTC DWG # 05-08-1610)

RECOMMENDED SOLDER PAD LAYOUT

NOTE:  
1. DIMENSIONS IN INCHES  
(MILLIMETERS)

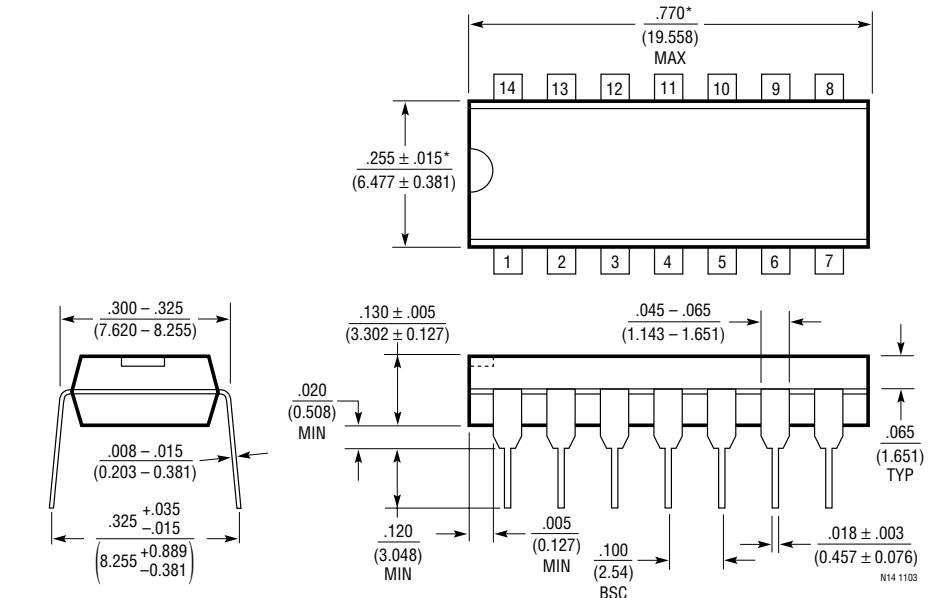

2. DRAWING NOT TO SCALE  
3. THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .006" (0.15mm)

S08 0303

## PACKAGE DESCRIPTION

**N Package**  
**14-Lead PDIP (Narrow .300 Inch)**  
(Reference LTC DWG # 05-08-1510)

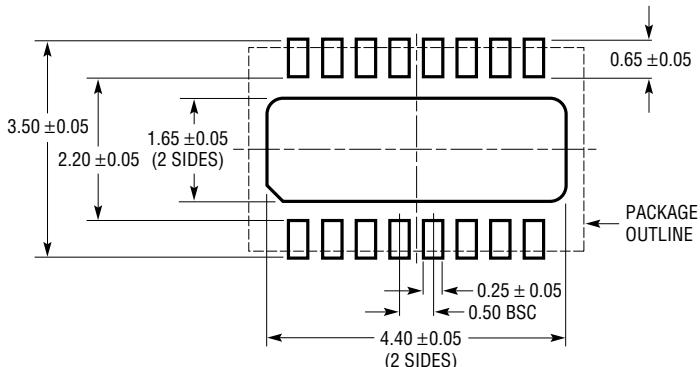

**S Package**  
**14-Lead Plastic Small Outline (Narrow .150 Inch)**  
(Reference LTC DWG # 05-08-1610)

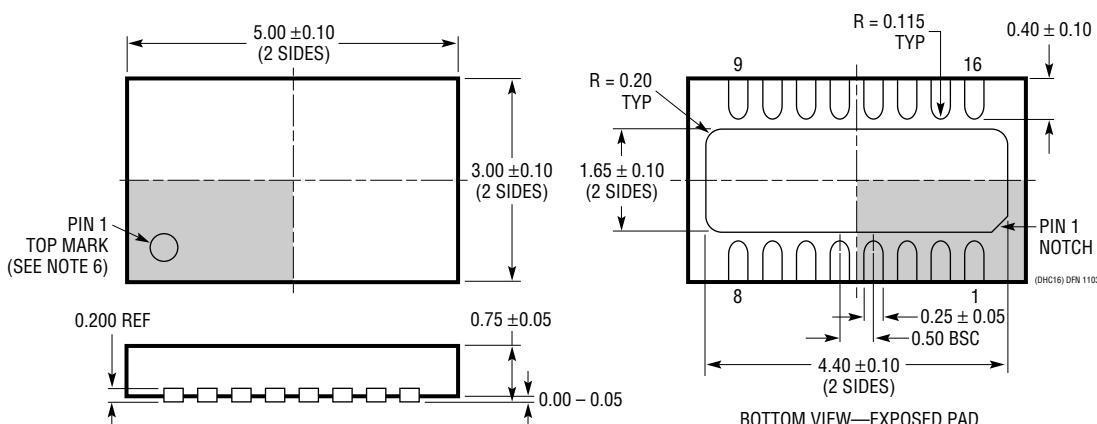

## PACKAGE DESCRIPTION

**DHC Package  
16-Lead Plastic DFN (5mm × 3mm)**  
(Reference LTC DWG # 05-08-1706)

**RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS**

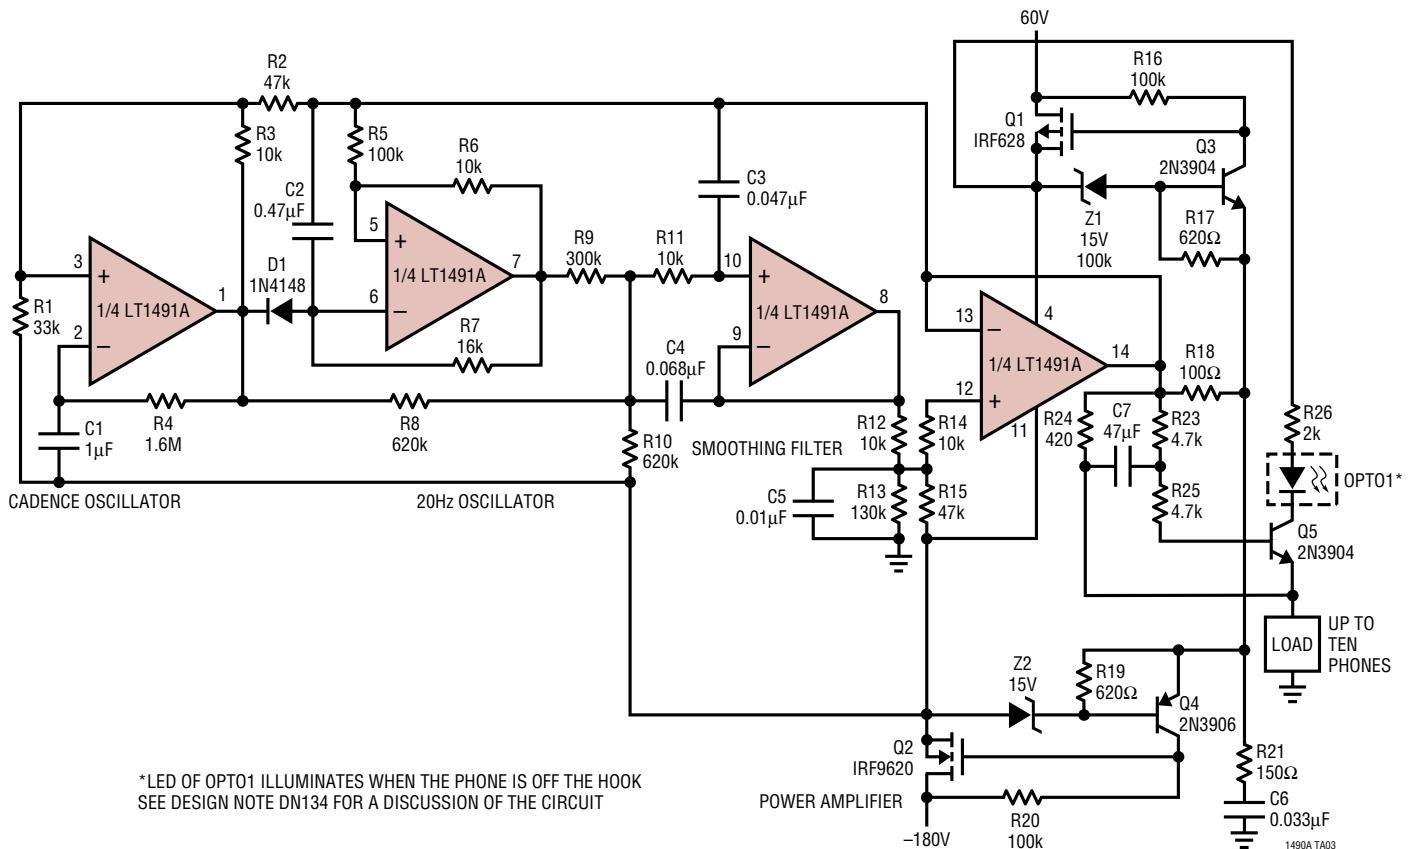

**NOTE:**

1. DRAWING PROPOSED TO BE MADE VARIATION OF VERSION (WJED-1) IN JEDEC PACKAGE OUTLINE MO-229
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE
