Dual/Quad Micropower, 1MHz C-Load Picoampere Bias Current JFET Input Op Amps

FEATURES

- **Input Bias Current:**
  2pA Max (LT1464A)
  20pA Max (LT1464, LT1465)
- **Supply Current per Amplifier: 200μA Max**
- Gain Bandwidth Product: 1MHz Typ
- Slew Rate: 0.9V/μs Typ
- Input Common Mode Range Includes Positive Rail
- Unity-Gain Stable for C-Load™ Up to 10nF
- Open-Loop Gain: 1 Million Typ
- Guaranteed Specs with ±5V, ±15V Supplies
- Guaranteed Matching Specifications
- Standard Pinout: SO-8, SO-14 Package

APPLICATIONS

- Battery-Powered Systems
- Photocurrent Amplifiers
- Low Frequency, Micropower Active Filters
- Low Droop Track-and-Hold Circuits

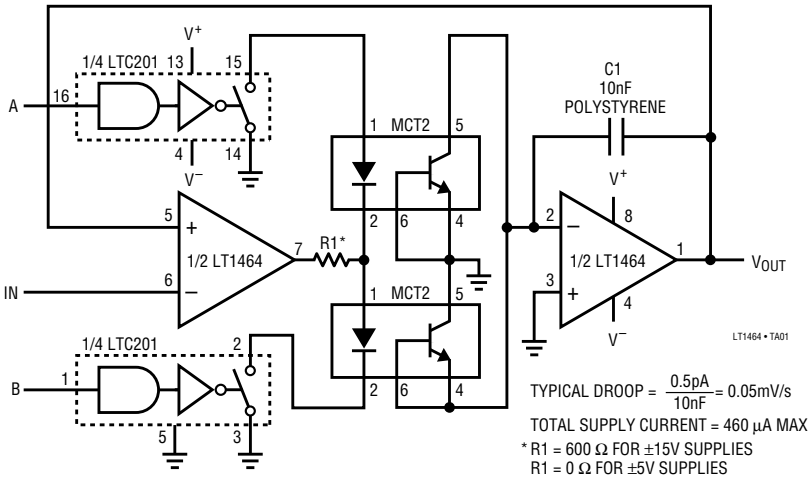
DESCRIPTION

The LT®1464 (dual) and LT1465 (quad) are the first micropower op amps (200μA max per amp) to offer picoampere input bias currents (500fA typ) and unity-gain stability for capacitive loads up to 10nF. The output can swing a 10k load to within 1.5V of either supply, just like op amps that require an order of magnitude more supply current. This unique combination of performance makes the LT1464/LT1465 ideal over a wide range of input and output impedances.

In the design and testing of the LT1464/LT1465, particular emphasis has been placed on optimizing performance in the low cost SO-8 (dual) and 14-lead SO (quad) package for ±15V and ±5V supplies. The input common mode range includes the positive rail. Slew rate (0.5V/μs min) and gain bandwidth product (650kHz min) are 100% tested. A full set of matching specifications is also provided.

TYPICAL APPLICATION

Micropower Low Droop Track-and-Hold/Peak Detector



$$\text{TYPICAL DROOP} = \frac{0.5\text{pA}}{10\text{nF}} = 0.05\text{mV/s}$$

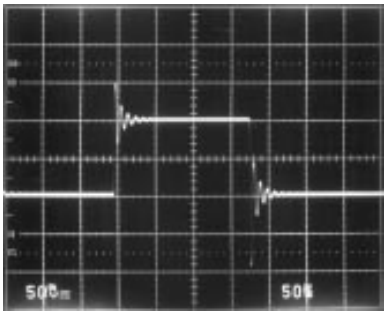
TOTAL SUPPLY CURRENT = 460 μA MAX

* R1 = 600 Ω FOR ±15V SUPPLIES
R1 = 0 Ω FOR ±5V SUPPLIES

FUNCTION	MODE	IN A	IN B	MODE	IN A	IN B
Track-and-Hold	Track	0	0	Hold	1	1
Positive Peak Detector	Reset	0	0	Store	0	1
Negative Peak Detector	Reset	0	0	Store	1	0

LTC201 switch is open for logic "1".

Small-Signal Response, C_{LOAD} = 10nF



A_V = 1
V_S = ±5V, ±15V
C_L = 10nF

ABSOLUTE MAXIMUM RATINGS

Supply Voltage ..... ±20V
Differential Input Voltage ..... ±40V
Input Current 20mA
Output Short-Circuit Duration ..... Indefinite
Operating Temperature Range ..... –40°C to 85°C
Specified Temperature Range ..... –40°C to 85°C
Maximum Junction Temperature ..... 150°C
Storage Temperature Range ..... –65°C to 150°C
Lead Temperature (Soldering, 10 sec) ..... 300°C

The ● denotes specifications which apply over the full operating temperature range.

Note 1: Typical parameters are defined as 60% yield of parameter distributions of individual amplifiers, i.e., out of 100 LT1465s (or 100 LT1464s) typically 240 op amps (or 120) will be better than the indicated specification.

Note 2: The LT1464 and LT1465 are designed, characterized and expected to meet these extended temperature limits, but are not tested at –40°C and 85°C. Guaranteed I grade parts are available, consult factory.

Note 3: Current noise is calculated from the formula: $i_n = (2qi_b)^{1/2}$ where $q = (1.6)(10)^{-19}$ coulomb. The noise of source resistors up to 1GΩ swamps the contribution of current noise.

Note 4: Slew rate is measured in $A_V = -1$; input signal is ±7.5V, output is measured at ±2.5V.

Note 5: ΔCMRR and ΔPSRR are defined as follows:

1. CMRR and PSRR are measured in μV/V on the individual amplifiers.
2. The difference is calculated between the matching sides in μV/V.
3. The result is converted to dB.

Note 6: This parameter is not 100% tested.

Note 7: Matching parameters are the difference between amplifiers A and D and between B and C on the LT1465; between the two amplifiers on the LT1464.

APPLICATIONS INFORMATION

Phase Reversal Protection

Most industry standard JFET input single, dual and quad op amps exhibit phase reversal at the output when the negative common mode limit at the input is exceeded. Common mode range is at a premium at ±5V supplies. The Figures show a ±5.2V sine wave input (Figure 1a), the response of a competing JFET input op amp in the unity-gain follower mode (Figure 1b) and the response of the LT1464/LT1465 (Figure 1c).

The phase reversal of Figure 1b can cause lock-up in servo systems. The LT1464/LT1465 does not phase-reverse when the common mode input is anywhere within the supplies.
