

## LOW DROP DUAL POWER OPERATIONAL AMPLIFIERS

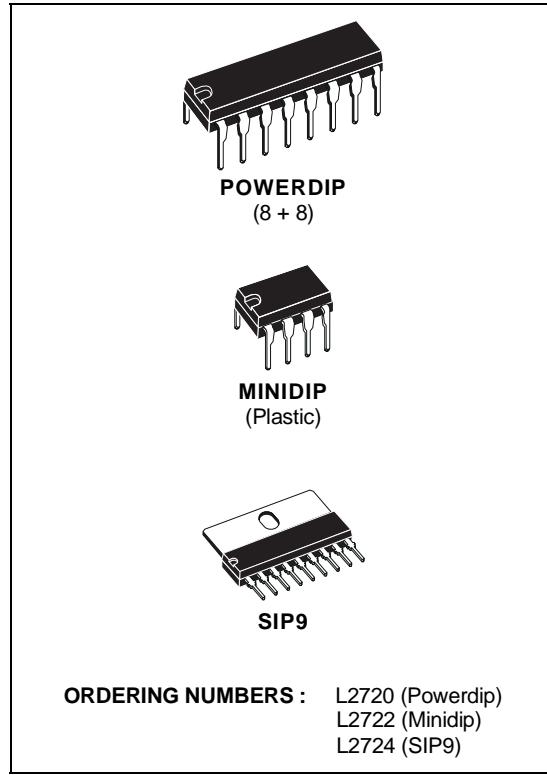

- OUTPUT CURRENT TO 1 A
- OPERATES AT LOW VOLTAGES
- SINGLE OR SPLIT SUPPLY
- LARGE COMMON-MODE AND DIFFERENTIAL MODE RANGE
- LOW INPUT OFFSET VOLTAGE
- GROUND COMPATIBLE INPUTS
- LOW SATURATION VOLTAGE
- THERMAL SHUTDOWN
- CLAMP DIODE

## DESCRIPTION

The L2720, L2722 and L2724 are monolithic integrated circuits in powerdip, minidip and SIP-9 packages, intended for use as power operational amplifiers in a wide range of applications including servo amplifiers and power supplies.

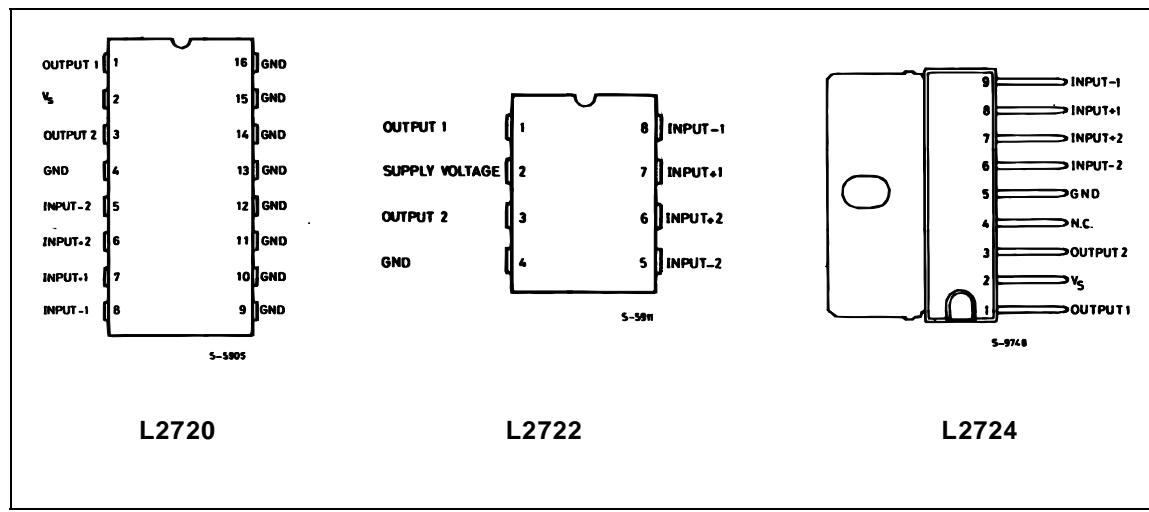

They are particularly indicated for driving, inductive loads, as motor and finds applications in compact-disc VCR automotive, etc.

The high gain and high output power capability provide superior performance whatever an operational amplifier/power booster combination is required.

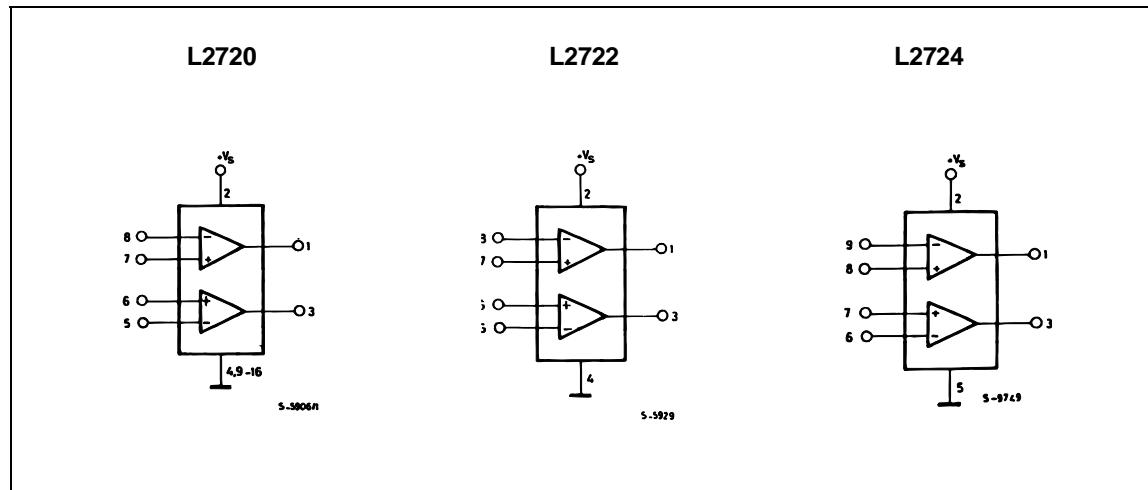

ORDERING NUMBERS :  
L2720 (Powerdip)  
L2722 (Minidip)  
L2724 (SIP9)

### APPLICATION SUGGESTION

In order to avoid possible instability occurring into final stage the usual suggestions for the linear power stages are useful, as for instance :

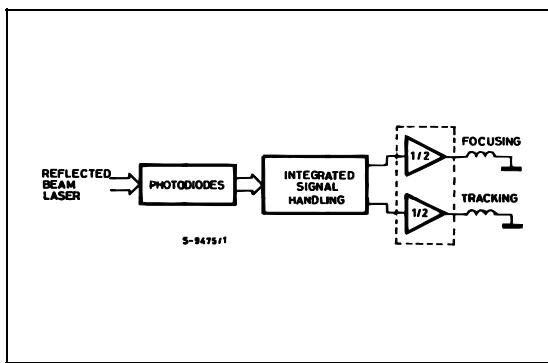

- layout accuracy ;
- A 100nF capacitor connected between supply pins and ground ;

- boucherot cell (0.1 to 0.2  $\mu$ F + 1 $\Omega$  series) between outputs and ground or across the load. With single supply operation, a resistor (1k $\Omega$ ) between the output and supply pin can be necessary for stability.

**Figure 10 :** Capstan Motor Control in Video Recorders

**Figure 11 :** Motor Current Control Circuit

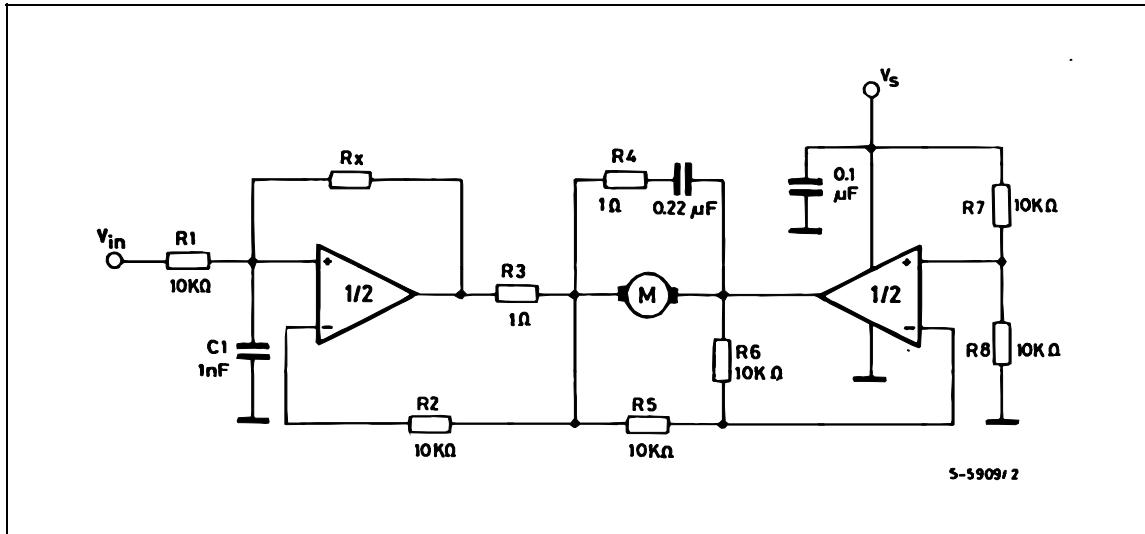

**Figure 12 :** Bidirectional Speed Control of DC Motors

$$2R_3 \cdot R_1$$

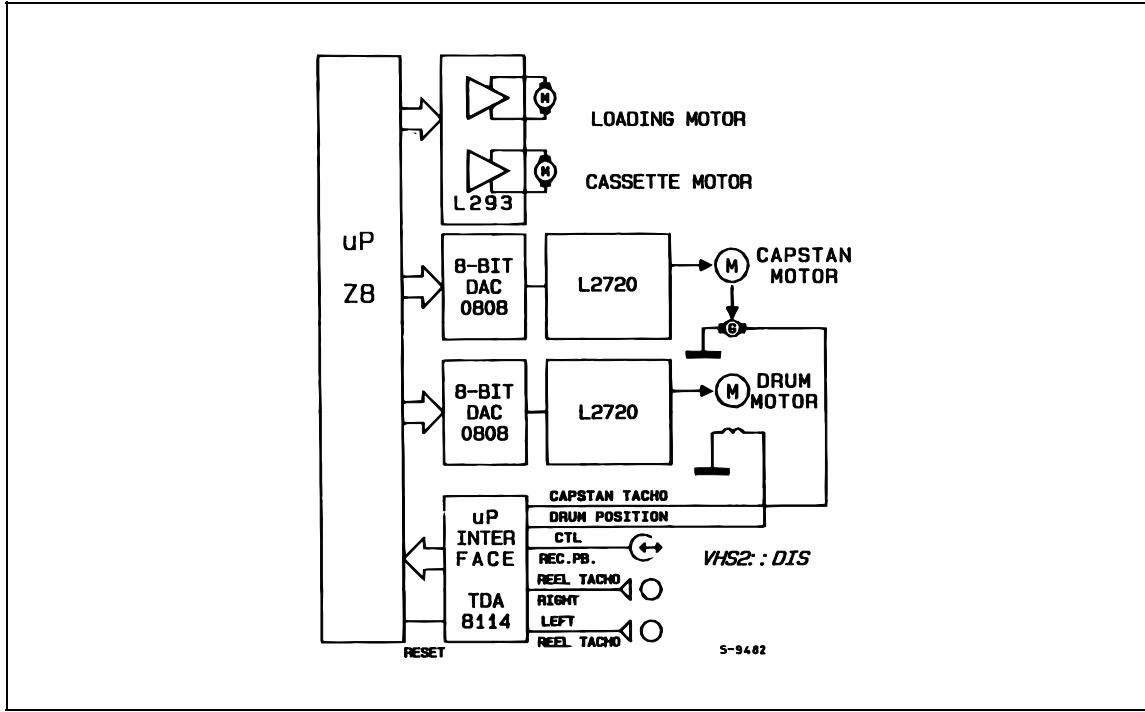

For circuit stability ensure that  $R_x > \frac{2R_3 \cdot R_1}{R_M}$  where  $R_M$  = internal resistance of motor.

The voltage available at the terminals of the motor is  $V_M = 2(V_i - \frac{V_s}{2}) + |R_o| \cdot I_M$  where  $|R_o| = \frac{2R_3 \cdot R_1}{R_x}$

and  $I_M$  is the motor current.
