

# DS1815 3.3V EconoReset with Push-Pull Output

#### www.maxim-ic.com

#### **FEATURES**

- Automatically restarts a microprocessor after power failure
- Maintains reset for 150ms after V<sub>CC</sub> returns to an in-tolerance condition
- Reduces need for discrete components
- Precision temperature-compensated voltage reference and voltage sensor
- Accurate 5%, 10% or 20% power monitoring
- Low-cost TO-92 or space saving surfacemount SOT-23 packages available
- Push-pull output for low current operation
- Operating temperature -40°C to +85°C

#### DESCRIPTION

The DS1815 EconoReset uses a precision temperature reference and comparator circuit to monitor the status of the power supply ( $V_{CC}$ ). When an out-of-tolerance condition is detected, an internal power-fail signal is generated which forces reset to the active state. When  $V_{CC}$  returns to an in-tolerance condition, the reset signal is kept in the active state for approximately 150ms to allow the power supply and processor to stabilize.

### **OPERATION** — **POWER MONITOR**

The DS1815 provides the functions of detecting out-of-tolerance power supply conditions and warning a processor-based system of impending power failure. When  $V_{CC}$  is detected as out of tolerance, the  $\overline{RST}$  signal is asserted. On power-up,  $\overline{RST}$  is kept active for approximately 150ms after the power supply has reached the selected tolerance. This allows the power supply and microprocessor to stabilize before  $\overline{RST}$  is released.

<sup>\*</sup> This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

### **NOTES:**

- 1. All voltages are referenced to ground.
- 2. Measured with  $V_{CC} \ge 2.7V$ .
- 3. Measured with  $\overline{RST}$  output open.
- 4. Measured with  $2.7V \le V_{CC} \le 3.3V$ .
- 5.  $t_R = 5 \mu s$ .
- 6. The t<sub>F</sub> value is for reference in defining values for T<sub>RPD</sub> and should not be considered a requirement for proper operation or use of the device.
