

LD1117AXX12, LD1117AXX18 LD1117AXX33, LD1117AXX

Low drop fixed and adjustable positive voltage regulators

Features

- Low dropout voltage:
 - 1.15 V typ. @ $I_{OUT} = 1\text{ A}$, 25 °C
- Very low quiescent current:
 - 5 mA typ. @ 25 °C
- Output current up to 1 A
- Fixed output voltage of:
 - 1.2 V, 1.8 V, 2.5 V, 3.3 V
- Adjustable version availability ($V_{REL} = 1.25\text{ V}$)
- Internal current and thermal limit
- Only 10 μF for stability
- Available in $\pm 2\%$ (at 25 °C) and 4 % in full temperature range
- High supply voltage rejection:
 - 80 dB typ. (at 25 °C)
- Temperature range: 0 °C to 125 °C

common 10 μF minimum capacitor is needed for stability. Only chip trimming allows the regulator to reach a very tight output voltage tolerance, within $\pm 2\%$ at 25 °C.

Description

The LD1117Axx is a low drop voltage regulator able to provide up to 1 A of output current, available even in adjustable version ($V_{REF} = 1.25\text{ V}$). Concerning fixed versions, are offered the following output voltages: 1.2 V, 1.8 V, 2.5 V and 3.3 V. The device is supplied in: SOT-223, DPAK and TO-220. Surface mount packages optimize the thermal characteristics even offering a relevant space saving effect. High efficiency is assured by NPN pass transistor. Only a very

2 Pin configuration

Figure 2. Pin connections (top view)

Note: The TAB is connected to the V_{OUT}.

3 Maximum ratings

Table 2. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{IN}	DC input voltage	15	V
P_D	Power dissipation	12	W
T_{STG}	Storage temperature range	-40 to +150	°C
T_{OP}	Operating junction temperature range	0 to +125	°C

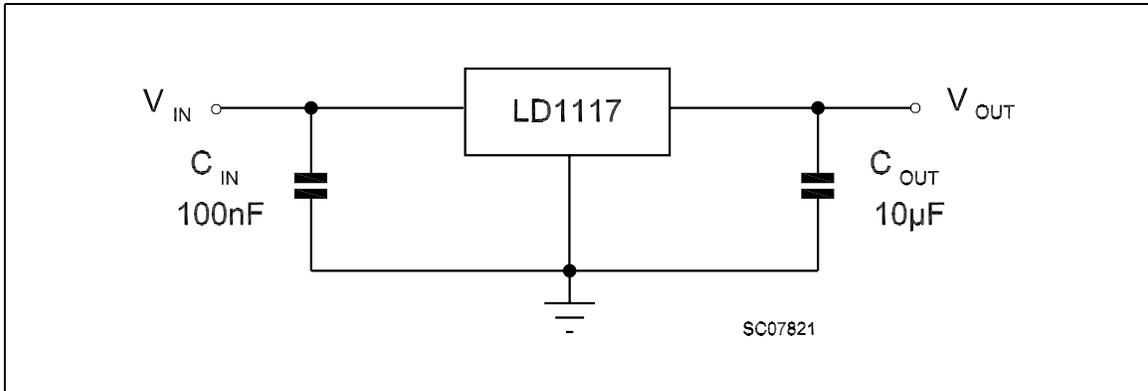

Note: Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied. Over the above suggested max power dissipation a short circuit could definitively damage the device.

Table 3. Thermal data

Symbol	Parameter	SOT-223	DPAK	TO-220	Unit
R_{thJC}	Thermal resistance junction-case	15	8	5	°C/W
R_{thJA}	Thermal resistance junction-ambient			50	°C/W

7 LD1117A adjustable: application note

The LD1117A adjustable has a thermal stabilized 1.25 ± 0.012 V reference voltage between the OUT and ADJ pins. I_{ADJ} is $60 \mu\text{A}$ typ. ($120 \mu\text{A}$ max.) and ΔI_{ADJ} is $1 \mu\text{A}$ typ. ($5 \mu\text{A}$ max.).

R_1 is normally fixed to 120Ω . From [Figure 7](#) we obtain:

$$V_{OUT} = V_{REF} + R_2 (I_{ADJ} + I_{R1}) = V_{REF} + R_2 (I_{ADJ} + V_{REF} / R_1) = V_{REF} (1 + R_2 / R_1) + R_2 \times I_{ADJ}$$

In normal application R_2 value is in the range of few $k\Omega$, so the $R_2 \times I_{ADJ}$ product could not be considered in the V_{OUT} calculation; then the above expression becomes:

$$V_{OUT} = V_{REF} (1 + R_2 / R_1)$$

In order to have the better load regulation it is important to realize a good Kelvin connection of R_1 and R_2 resistors. In particular R_1 connection must be realized very close to OUT and ADJ pin, while R_2 ground connection must be placed as near as possible to the negative Load pin. Ripple rejection can be improved by introducing a $10 \mu\text{F}$ electrolytic capacitor placed in parallel to the R_2 resistor (see [Figure 10](#)).
