

Simple and Easy-to-Use Amplifiers with a Sensitivity Adjuster Provided as a Standard Feature

- Intuitive LED bar display shows light levels at a glance.
- Utilizes OMRON's innovative wire-saving connector.
- Reduced wiring and space requirements for power lines.
- Optical communications prevents mutual interference for up to 5 amplifiers
- High-speed detection, mark-detecting, and water-resistant models also available.

Safety Precautions

Refer to *Warranty and Limitations of Liability*.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Precautions for Correct Use

Do not use the product in atmospheres or environments that exceed product ratings.

Amplifier Units

● Designing

Communications Hole

The hole on the side of the Amplifier Unit is a communications hole for preventing mutual interference when Amplifier Units are mounted side-by-side. The E3X-MC11 Mobile Console (order separately) cannot be used.

If an excessive amount of light is received via the Sensor, the mutual interference prevention function may not work. In this case, make the appropriate adjustments using the sensitivity adjuster.

The mutual interference prevention function will not operate when the E3X-NA is used side-by-side with E3X-DA-N models.

● Mounting

DIN Track Mounting/Removal

Mounting Amplifier Units

1. Mount the Amplifier Units one at a time onto the DIN track.

2. Slide the Amplifier Units together, line up the clips, and press the Amplifier Units together until they click into place.

Removing Amplifier Units

Slide Amplifier Units away from each other, and remove from the DIN track one at a time. (Do not attempt to remove Amplifier Units from the DIN track without separating them first.)

- Note: 1. The specifications for ambient temperature will vary according to the number of Amplifier Units used together. For details, refer to *Ratings and Specifications*.
2. Always turn OFF the power supply before mounting or removing Amplifier Units.

Fiber Connection and Disconnection

The E3X Amplifier Unit has a lock lever. Connect or disconnect the fibers to or from the E3X Amplifier Unit using the following procedures:

1. Connection

Open the Protective Cover, insert the fibers according to the fiber insertion marks on the side of the Amplifier Unit, and lower the lock lever.

2. Disconnection

Remove the Protective Cover and raise the lock lever to pull out the fiber.

Note: To maintain the fiber properties, confirm that the lock is released before removing the fiber.

3. Precautions for Fiber Connection/Disconnection

Be sure to lock or unlock the lock lever within an ambient temperature range between -10°C and 40°C .

● Operating Environment

Ambient Conditions

If dust or dirt adhere to the hole for optical communications, it may prevent normal communications. Be sure to remove any dust or dirt before using the Units.

● Other

Protective Cover

Be sure to mount the Protective Cover before use.

Amplifier Units with Connectors

● Mounting

Mounting Connectors

- 1. Insert the Master or Slave Connector into the Amplifier Unit until it clicks into place.

- 2. Join Amplifier Units together as required after all the Master and Slave Connectors have been inserted.
- 3. Attach the seals (provided as accessories) to the sides of Master and Slave Connectors that are not connected to other Connectors.

Note: Attach the stickers to the sides with grooves.

Removing Connectors

- 1. Slide the slave Amplifier Unit for which the Connector is to be removed away from the rest of the group.
- 2. After the Amplifier Unit has been separated, press down on the lever on the Connector and remove it. (Do not attempt to remove Connectors without separating them from other Amplifier Units first.)

Mounting End Plate (PFP-M)

Depending on how it is mounted, an Amplifier Unit may move during operation. In this case, use an End Plate. Before mounting an End Plate, remove the clip from the master Amplifier Unit using a nipper or similar tool.

The clip can also be removed using the following mechanism, which is incorporated in the construction of the section underneath the clip.

- 1. Insert the clip to be removed into the slit underneath the clip on another Amplifier Unit.

- 2. Remove the clip by rotating the Amplifier Unit.
