SZA-2044(Z)

2.0GHz to 2.7GHz 5V 1W POWER AMPLIFIER

Package: QFN, 4mmx4mm

Product Description

RFMD's SZA-2044 is a high efficiency class AB Heterojunction Bipolar Transistor (HBT) amplifier housed in a low-cost surface-mountable plastic package. This HBT amplifier is made with InGaP on GaAs device technology and fabricated with MOCVD for an ideal combination of low cost and high reliability. This product is specifically designed as a final stage 802.11b/g and 802.16 equipment in the 2.0GHz to 2.7GHz bands. It can run from a 3V to 5V supply. Optimized on-chip impedance matching circuitry provides a 50Ω nominal RF input impedance. The external output match and bias adjustability allows load line optimization for other applications over narrower bands, It features an output power detector, on/off power control, and high RF overdrive robustness. This product is available in a ROHS Compliant and Green package with matte tin finish, designated by the "Z" package suffix.

1, 2, 4, 5, 7, 9, 11, 13, 15, 17, 19	N/C	These are unused pins and not wired inside the package. They may be grounded or connected to adjacent pins.
6	VPC1	VPC1 is the bias control pin for the stage 1 active bias circuit. An external series resistor is required for proper setting of bias levels. Refer to the evaluation board schematic for resistor value. To prevent potential damage, do not apply voltage to this pin that is +1V greater than voltage applied to pin 20 (Vbias) unless Vpc supply current capability is less than 10mA.
8	VPC2	VPC2 is the bias control pin for the stage 2 active bias circuit. An external series resistor is required for proper setting of bias levels. Refer to the evaluation board schematic for resistor value. To prevent potential damage, do not apply voltage to this pin that is +1V greater than voltage applied to pin 20 (Vbias) unless Vpc supply current capability is less than 10mA.
10	VDET	Output power detector voltage. Load with >10KΩ for best performance
3	RF IN	RF input pin. This is DC grounded internal to the IC. Do not apply voltage to this pin.
12, 14	RF OUT	RF output pin. This is also another connection to the 2nd stage collector.
16	VC2	2nd stage collector bias pin. Apply 3.0V to 5.0V to this pin.
18	VC1	1st stage collector bias pin. Apply 3.0V to 5.0V to this pin.
20	VBIAS	Active bias network VCC. Apply 3.0V to 5.0V to this pin.
