

STEVAL-TDR001V1

2 stage RF power amp: PD84001 + PD54003L-E + LPF
N-channel enhancement-mode lateral MOSFETs

Feature

- Excellent thermal stability
- Frequency: 380 - 512 MHz
- Supply voltage: 7.2 V
- Output power: 4 W
- Current < 1.6 A
- Input power < 10 dBm
- Harmonics level < -70 dBc
- Load mismatch 20:1
- V_{APC} 5 V max
- Beo free amplifier
- RoHS compliant

Description

The STEVAL-TDR001V1 is a two stage RF power amplifier which includes a low pass output filter for harmonics rejection specifically designed for portable two-way UHF radio communication.

6.1.1 Mounting indications

Figure 12. Standard SMD mounting

6.2 Thermal pad and via design SOT-89

Thermal vias are required in the PCB layout to effectively conduct heat away from the package. The via pattern has been designed to address thermal, power dissipation and electrical requirements of the device.

The via pattern is based on thru-hole vias with 0.203 mm to 0.330 mm finished hole size on a 0.5 mm to 1.2 mm grid pattern with 0.025 plating on via walls. If micro vias are used in a design, it is suggested that the quantity of vias be increased by a 4:1 ratio to achieve similar results.

Figure 13. Pad layout details

6.2.1 Soldering profile

Figure 14 shows the recommended solder for devices that have Pb-free terminal plating and where a Pb-free solder is used.

Figure 14. Recommended solder profile

Figure 15 shows the recommended solder for devices with Pb-free terminal plating used with leaded solder, or for devices with leaded terminal plating used with a leaded solder.
