

### **TDA7515**

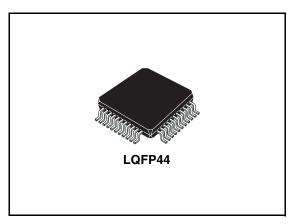

### RF front-end for AM/FM-DSP car radios with IF sampling

#### **Features**

- RF AGC generation by RF and IF detection
- I/Q Mixer for FM IF 10.7MHz with image rejection and programmable IF tank adjust for FM and AM
- Preamplifier and mixer for IF 10.7MHz AM upconversion
- VCO and programmable divider for "world receiver"
- Programmable controlled IF-gain stage
- High performance fast PLL for RDS-system
- Electronic alignment for the preselection stages
- All functions bus-controlled

### **Description**

The front-end is a high performance tuner circuit for AM/FM - DSP car radios with 10.7MHz - IF sampling.

It contains mixer and IF amplifiers for AM and FM, VCO and PLL synthesizer on a single chip.

Use of BICMOS technology allows the implementation of several tuning functions and a minimum of external components.

TDA7515 Package information

### 3 Package information

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label.

ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
