

## AM/FM Receiver IC

### Description

The T4258 is an integrated AM/FM frontend circuit in BICMOS technology. It contains a double conversion system for FM and an up-/down conversion circuit for AM (IF1 = 10.7 MHz, IF2 = 450 kHz). A complete automatically aligned high performance AM/FM tuner

can be built together with the PLL U4256BM. This ICs are designed for high performance car radio applications.

Electrostatic sensitive device.

Observe precautions for handling.

### Features

- Receiving condition analyzer
- Integrated band filter for 2nd IF; with software controlled bandwidth
- Pin compatible with U4255BM
- FM-double conversion system
- World tuner, US Weatherband, J-band
- Completely integrated FM demodulator
- Soft mute and multipath noise cancellation
- AM up-/down conversion system
- AM stereo capability
- Stop signal generation for AM and FM
- Automatic alignment possible
- 3-wire bus controlled

Setting the local oscillator prescaler (VCO/ Buffer)

Prescaler VCO	Prescaler Buffer	Bit 12	Bit 11	Bit 10
1	1	X	0	0
1.5	3	0	0	1
1.5	1.5	1	0	1
2	2	X	1	0
3	3	X	1	1

Setting Bit 9 (expert mode) activates test mode (B18 – B23 active)

Mode	Bit 9
Normal mode	0
Test mode	1

Bit 8 = 0 activates the multipath noise canceller

Multipath Noise Canceller	Bit 8
Active	0
Not active	1

Bit 7 = 1 mutes the MPX output

Mute of MPX Output	Bit 7
MPX out, Pin 11	0
Mute MPX	1

Bit 6 = 1 resets the Multipath sensor and the adjacent channel sensor

Sensor out (Pin 10, 40)	Bit 6
Normal	0
To ground	1

Bit 5 switches the AM noiseblanker ON/OFF

AM Noiseblanker	Bit 5
OFF	0
ON	1

Bits 0 to 3 set the band width of the integrated 2nd IF band filter

IF Bandwidth	Bit 3	Bit 2	Bit 1	Bit 0
200 kHz	0	0	0	0
190 kHz	0	0	0	1
180 kHz	0	0	1	0
170 kHz	0	0	1	1
160 kHz	0	1	0	0
150 kHz	0	1	0	1
140 kHz	0	1	1	0
130 kHz	0	1	1	1
120 kHz	1	0	0	0
110 kHz	1	0	0	1
100 kHz	1	0	1	0
90 kHz	1	0	1	1
80 kHz	1	1	0	0
70 kHz	1	1	0	1
60 kHz	1	1	1	0
50 kHz	1	1	1	1

## Ozone Depleting Substances Policy Statement

It is the policy of **Atmel Germany GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**Atmel Germany GmbH** has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**Atmel Germany GmbH** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

### We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use Atmel Wireless & Microcontrollers products for any unintended or unauthorized application, the buyer shall indemnify Atmel Wireless & Microcontrollers against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
