

APEX LT SERIES TRANSCEIVER MODULES

ZALM-301-1

Integrated Transceiver Modules for ZigBee / IEEE 802.15.4

Evaluation Kit available: ZAXM-201-KIT-1

DESCRIPTION

Apex modules provide a cost-effective RF transceiver solution for 2.4GHz ZigBee and IEEE 802.15.4 data links and wireless networks.

The **ZALM-301-1 Apex LT** module is based on Ember™ EM260 ZigBee network processor. Also onboard are a 100mW Power Amplifier and SPI-based microprocessor interface, providing you with the flexibility to choose an external microprocessor based on your application's needs.

The APEX LT provide over 4000 feet of range and is designed to deliver constant RF output power across the 2.1 to 3.6V voltage input, ensuring consistent performance over the entire life of the battery.

FEATURES

- 1 - 100 mW output power, software configured
- Designed for EmberZNet networks
- Miniature footprint: 1.00" x 1.275"
- Integrated PCB trace antenna
- Optional MMCX connector for external antenna
- 16 RF channels (Channel 16 operates at reduced power levels)
- Over 4000 feet of range
- Integrated hardware support for Ember InSight Development Environment
- Non-intrusive debug interface (SIF)
- AES 128 bit encryption
- Low power consumption
- Constant RF output power over 2.1–3.6 V voltage range
- FCC, IC, and CE certified
- RoHS compliant

APEX LT MODULE ZALM-301-1

- Ember™ EM260 platform
- Integrated IEEE 802.15.4 PHY and MAC
- Dedicated network processor
- SPI or UART interface to application microcontroller
- Handles all ZigBee processing & timing intensive tasks

APPLICATIONS

Automated Meter Reading

- In meter applications
- Thermostats
- In-home display units

Home & Building Automation

- Security
- HVAC control
- Lighting control
- Thermostats

Industrial Controls

- Food processing controls
- Traffic Management
- Sensor Networks
- Asset Management
- Barcode reader
- Patient Monitoring
- Glucose monitor

ORDERING INFORMATION

Part Number	Order Number	Supplying Form
ZALM-300 Series APEX LT MODULE	ZALM-301-1	Output power 100 mW, PCB Trace Antenna
	ZALM-301-1C	100 mW Output power, optional MMCX Connector with MMCX Connector for use with off board antenna
	ZAXM-201-KIT-1	Engineering Evaluation Kit (to evaluate the ZALM-301-1 module, please utilize the ZAXM-201-KIT-1)

EVALUATION KIT

CEL provides Apex Evaluation Kits to assist users in evaluating Apex and Apex LT modules. The key components of the Apex Evaluation Kit are the interface board and the CEL's Apex radio module.

Apex LT module combines an Ember EM260 (Apex LT) transceiver IC with an NEC high gain Power Amplifier and a high performance NEC RFIC switch.

The interface board features a serial communication interface, a power management module, peripherals such as potentiometer and accelerometer, and GPIO headers. The Evaluation Kit also contains four AA batteries and two USB cables.

For more detail information regarding Apex Evaluation Kit, refer to the **Apex Module Evaluation Kit User Guide** document. (http://www.cel.com/pdf/misc/apexseries_ug.pdf)

APEX LT MODULE MICROPROCESSOR

APEX LT modules provide a connection to the Ember Serial API over the SPI allowing the application development to be completed on a host microprocessor of your choice. In addition to the SPI signals, two additional signals (nHOST_INT and nWAKE) provide a handshake mechanism. The module provides a slave device with all transactions initiated by the host. Please consult the EM260 datasheet for details on the SPI Protocol including:

- Physical Interface Configuration
- SPI Transactions
- SPI Protocol Timing Parameters & Waveforms
- Data Formatting
- SPI Commands & Responses
- Handling Resets and Power Cycling
- Transaction Examples

ANTENNA

APEX and APEX LT modules include an integrated PCB trace antenna. An optional MMCX connector can be specified, enabling connection to a 50-ohm external antenna of the user's choice. See Ordering Information.

The PCB antenna employs an F-Antenna topology that is compact and supports an omni-directional radiation pattern. To maximize antenna efficiency, an adequate ground plane must be provided on the host PCB. If positioned correctly, the ground plane on the host board under the module can contribute significantly to antenna performance.

The position of the module on the host board and overall design of the product enclosure contribute to antenna performance. Poor design effects radiation patterns and can result in reflection, diffraction, and/or scattering of the transmitted signal. Measured radiation patterns of these modules are available from California Eastern Labs and can be used to benchmark design performance.

Here are some design guidelines to help ensure antenna performance:

- Never place the ground plane or route copper traces directly underneath the antenna portion of the module.
- Never place the antenna close to metallic objects.
- In the overall design, ensure that wiring and other components are not placed near the antenna.
- Do not place the antenna in a metallic or metallized plastic enclosure.
- Keep plastic enclosures 1 cm or more from the antenna in any direction.

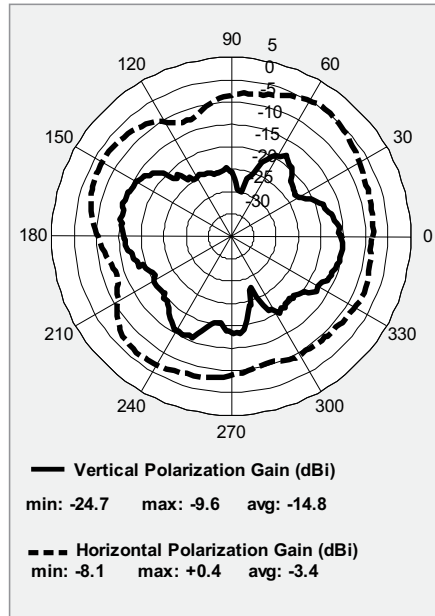

ANTENNA (Continued)

Orientation of EUT Peak Gain was in the Horizontal Position. The receiver antenna was in the Horizontal Position.

Frequency = 2405 MHz

Frequency = 2440 MHz

Frequency = 2480 MHz

MODES OF OPERATION

The Apex LT supports three power modes: Processor ACTIVE, processor IDLE, and DEEP SLEEP.

Processor ACTIVE

In this mode all operations are running normally.

Processor IDLE

While in idle mode, code execution halts until any interrupt occurs. All modules of the EM260 including the radio continue to operate normally. The EmberZNet stack automatically invokes idle as appropriate.

Deep Sleep

To achieve the lowest power consumption, the module can be set in DEEP SLEEP mode. In this mode most of the functionalities of the modules are turned off with the exception of the critical functions such as GPIO pads and RAM that is powered by the high voltage supply (DCC_PADS).

The module can be taken out of DEEP SLEEP in 3 ways:

- Configuring the sleep timer to generate an interrupt after some periods of time.
- Issuing external interrupt signal.
- Issuing commands through the SIF interface.

In DEEP SLEEP the current consumption of the module will drop to 5.0 μ A (5.5 μ A with optional 32.768kHz oscillator enabled).

For more detail information on modes of operation refer to Ember EM260 datasheet available at Ember's website (www.ember.com)

POWER AMPLIFIER REGULATOR CONTROL LINE

The APEX LT module includes a separate 1.8V regulator for a power amplifier bias that enables consistent module output performance over the wide 2.1 – 3.6V voltage range. To prevent excessive sleep currents, this regulator should be disabled when the module is in sleep mode. An external pull up resistor option is provided on each module (R6) that allows the regulator to be constantly enabled. This option increases the sleep current of the module to a point well above the specified values.

SPECIFICATIONS – VPA_EN (APEX LT)

Parameter	Min	Typ	Max	Unit
Regulator enable voltage	0.95			V
Regulator disable voltage			0.4	V
Enable line current (VEN = 0)			0.1	µA
Enable line current (VEN = VDD)			10	µA
Turn on Time			250	µsec

On the APEX LT module the VPA_EN control must be provided by the host microprocessor. In normal operation, the VPA_EN line must be set high. It must be set low when the module is put into sleep mode in conjunction with putting the EM260 into deep sleep. Upon module wake-up, a 250µsec turn-on time must be provided prior to any transmission, allowing the module’s regulator to settle. Note that this 250µsec requirement applies only to the external power amplifier, the wake-up time for the EM260 is separate from this value.

If the application does not put the module to sleep or if sleep current is not an issue, the power amplifier regulator may be permanently enabled by tying the control line high. In this setup, the sleep current will increase by 80µA over the 5µA Standby Current figure provided in Electrical Specifications.

SIF INTERFACE

The APEX LT module provide access to the SIF module programming and debug interface. Consult the EM260 datasheet for further details on the following SIF features:

- Production Testing
- Firmware Download
- Product Control and Characterization

HOST PROTOCOL INTERFACE COMMANDS

For information on Host Protocol Interface Commands and for other software-related documents refer to Ember’s website: http://www.ember.com/products_documentation.html

ABSOLUTE MAXIMUM RATINGS

Rating	Value	Unit
Power Supply Voltage	3.6	Vdc
Voltage on Any Digital Pin	VDD + 0.3, Max 3.6	Vdc
RF Input Power	+10	dBm
Storage Temperature Range	-45 to 125	°C

Note: Exceeding the maximum ratings may cause permanent damage to the module or devices.

RECOMMENDED (OPERATING CONDITIONS)

Characteristic	Min	Typ	Max	Unit
Power Supply Voltage (VDD)	2.1		3.6	V
Input Frequency	2405		2480	MHz
Ambient Temperature Range	-40	25	85	°C
Logic Input Low Voltage	0		20% VDD	V
Logic Input High Voltage	80% VDD		VDD	V

DC CHARACTERISTICS (@ 25°C, VDD = 3.3V unless otherwise noted)

Parameter	Min	Typ	Max	Unit
Logic Input Low	0		0.2 x VDD	V
Logic Input High	0.8 x VDD		VDD	V
Logic Output Low	0		0.18 x VDD	V
Logic Output High	0.82 x VDD		VDD	V
Power Consumption				
<i>Transmit Mode (100mW output):</i>				
APEX LT		170		mA
<i>Receive Mode:</i>				
APEX LT		37		mA
<i>Standby Mode:</i>				
10mW			5	µA
100mW			5	µA

RF CHARACTERISTICS (@ 25°C, VDD = 3.3V unless otherwise noted)

Parameter	Min	Typ	Max	Unit
General Characteristics				
RF Frequency Range	2400		2483.5	MHz
RF Data Rate		250		kbps
Transmitter				
Nominal Output Power		20		dBm
Programmable Output Power Range		32		dB
Error Vector Magnitude		15	35	%
Receiver				
Receiver Sensitivity (1% PER) – normal mode	-92	-96		dBm
Receiver Sensitivity (1% PER) – <i>boost mode</i> *	-93	-97		dBm
Saturation (Maximum Input Level) (1% PER)	0			dBm
<i>802.15.4 Adjacent Channel Rejection:</i>				
APEX LT	30			dB
802.15.4 Alternate Channel Rejection	40			dB
<i>802.11 g Rejection (±10 MHz):</i>				
APEX LT	30			dB

***Boost Mode** is an optional software-selectable high performance mode designed to increase receiver sensitivity.

Note: Refer to Ember EM260 datasheet for additional details.

PIN SIGNALS I/O PORT CONFIGURATION

The APEX LT module has a 28 edge I/O interfaces for connection to the user’s host board. *Figure 1* shows the layout of the 28 edge castellations.

Figure 1 (Top View)

APEX LT I/O PIN ASSIGNMENTS

Pin #	Name	Type	Description
1	GROUND	GND	Ground
2	GROUND	GND	Ground
3	GROUND	GND	Ground
4	GROUND	GND	Ground
5	VDD	PI	Power Supply Input
6	nRESET	DI	Reset, active low
7	MOSI	DI	SPI Data, Master Out/Slave In (from Host to APEX LT)
8	MISO	DO	SPI Data, Master In/Slave Out (from APEX LT to Host)
9	SCLK	DI	SPI Clock (from Host to APEX LT)
10	VPA_EN	DI	APEX LT Enable, active high (see section of "Power Amplifier Regulator Control Line")
11	nRTS	DO	UART RTS
12	nSSEL_INT/nCTS	DI	SPI Slave Select (from Host to APEX LT)/UART CTS
13	PTI_EN	DO	PTI Frame signal
14	PTI_DATA	DO	PTI Data signal
15	TXD	DO	UART TXD
16	nHOST_INT/RXD	DO/DI	Host Interrupt Signal (from APEX LT to Host) or UART RXD
17	nWAKE	DI	Wake Interrupt Signal (from host to APEX LT)
18	GROUND	GND	Ground
19	SIF_CLK	DI	SIF Interface clock
20	SIF_MISO	DO	SIF Interface master in/slave out
21	SIF_MOSI	DI	SIF Interface master out/slave in
22	nSIF_LOAD	DI/DO	SIF Interface load strobe
23	SDBG	DO	Spare Debug Signal
24	LINK_ACTIVITY	DO	Link and Activity signal
25	GROUND	GND	Ground
26	GROUND	GND	Ground
27	GROUND	GND	Ground
28	GROUND	GND	Ground

Unused I/O pins should be left unconnected and the pin state set via the Host Protocol.

DI = Digital Input

PI = Power Input

DO = Digital Output

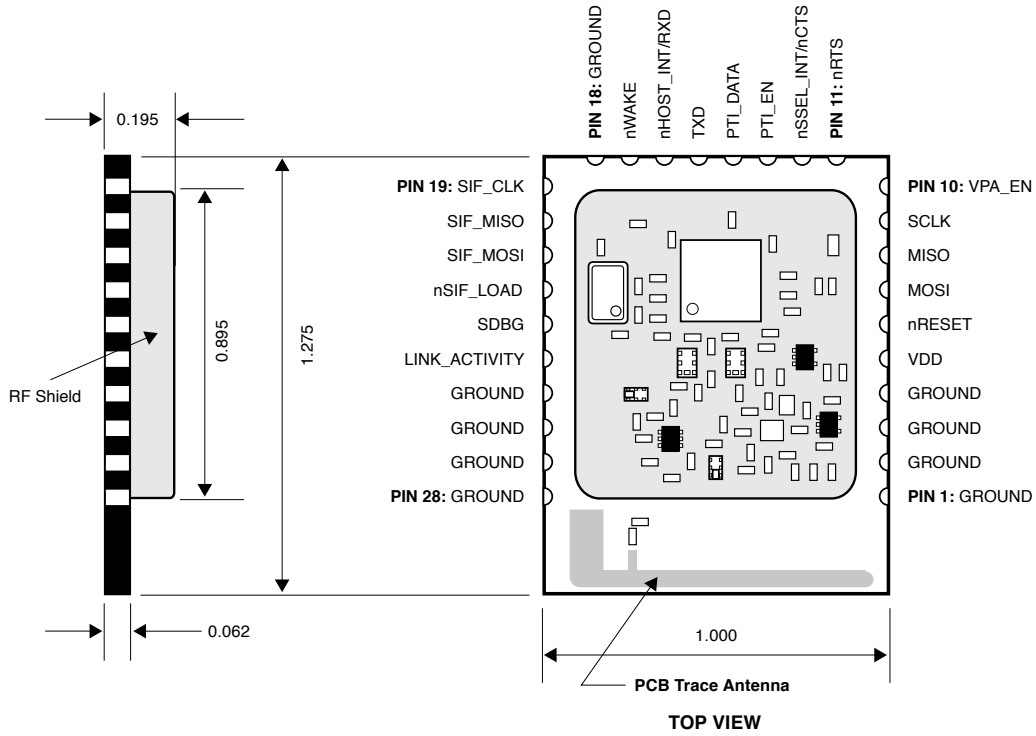

GND = Ground

AI = Analog Input

AO = Analog Output

DIMENSIONS: ZALM-301-1 Apex LT

Dimensions in inches. Tolerances = +/-0.005" unless otherwise noted.

DIMENSIONS: ZALM-301-1C Apex LT with Optional MMCX Connector

Dimensions in inches. Tolerances = +/-0.005" unless otherwise noted.

PCB COPPER PATTERN LAYOUT: Apex LT

Dimensions in inches. Tolerances = +/-0.005" unless otherwise noted.

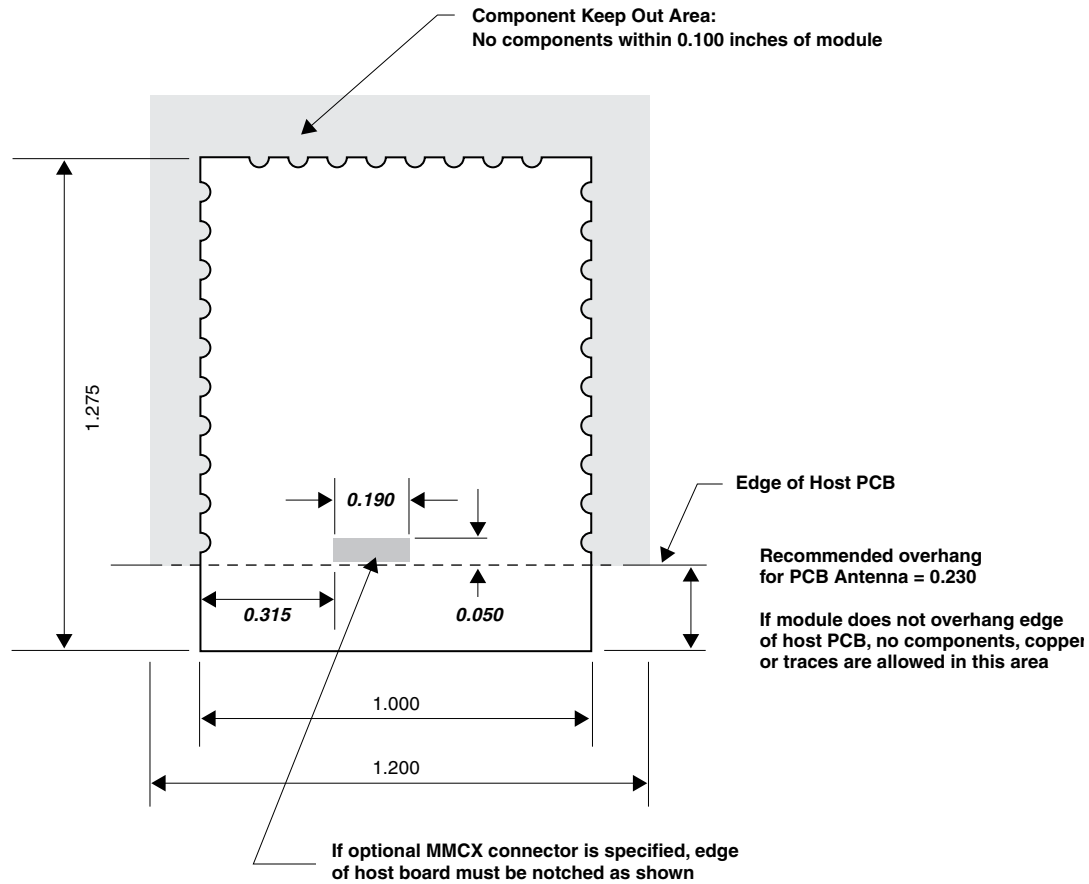

PCB PASTE STENCIL PATTERN: Apex LT

Dimensions in inches. Tolerances = +/-0.005" unless otherwise noted.

PCB Keep-out areas: Apex LT

Dimensions in inches. Tolerances = +/-0.005" unless otherwise noted.

For optimum antenna performance, the APEX LT modules should be mounted with the PCB trace antenna overhanging the edge of the host board. To further improve performance, a ground plane may be placed on the host board under the module, up to the PCB edge. The installation of an uninterrupted ground plane on a layer directly beneath the module will also allow you to run traces under this layer. CEL can provide assistance with your PCB layout.

PROCESSING

Recommended Reflow Profile

Parameters Values

Ramp up rate (from Tsoakmax to Tpeak)	3°/sec max
Minimum Soak Temperature	150°C
Maximum Soak Temperature	200°C
Soak Time	60-120 sec
TLiquidus	217°C
Time above TL	60-150 sec
Tpeak	260 + 0°C
Time within 5° of Tpeak	20-30 sec
Time from 25° to Tpeak	8 min max
Ramp down rate	6°C/sec max

Achieve the brightest possible solder fillets with a good shape and low contact angle.

Pb-Free Soldering Paste

Use of "No Clean" soldering paste is strongly recommended, as it does not require cleaning after the soldering process.

Note: The quality of the solder joints on the castellations ('half vias') where they contact the host board should meet the appropriate IPC specification. See IPC-A-610-D Acceptability of Electronic Assemblies, section 8.2.4 Castellated Terminations.

Cleaning

In general, cleaning the populated modules is strongly discouraged. Residuals under the module cannot be easily removed with any cleaning process.

- Cleaning with water can lead to capillary effects where water is absorbed into the gap between the host board and the module. The combination of soldering flux residuals and encapsulated water could lead to short circuits between neighboring pads. Water could also damage any stickers or labels.
- Cleaning with alcohol or a similar organic solvent will likely flood soldering flux residuals into the two housings, which is not accessible for post-washing inspection. The solvent could also damage any stickers or labels.
- Ultrasonic cleaning could damage the module permanently.

The best approach is to consider using a "no clean" soldering paste and eliminate the post-soldering cleaning step.

Optical Inspection

After soldering the Module to the host board, consider optical inspection to check the following:

- Proper alignment and centering of the module over the pads.
- Proper solder joints on all pads.
- Excessive solder or contacts to neighboring pads, or vias.

PROCESSING *(Continued)*

Repeating Reflow Soldering

Only a single reflow soldering process is encouraged for host boards.

Wave Soldering

If a wave soldering process is required on the host boards due to the presence of leaded components, only a single wave soldering process is encouraged.

Hand Soldering

Hand soldering is possible. Use a soldering iron temperature setting equivalent to 350°C, follow IPC recommendations/ reference document IPC-7711.

Rework

The Apex LT Module can be unsoldered from the host board. Use of a hot air re-work tool and hot plate for pre-heating from underneath is recommended. Avoid overheating.

!Warning Never attempt a rework on the module itself, e.g. replacing individual components. Such actions will terminate warranty coverage.

Additional Grounding

Attempts to improve module or system grounding by soldering braids, wires, or cables onto the module RF shield cover is done at the customers own risk. The numerous ground pins at the module perimeter should be sufficient for optimum immunity to external RF interference.

AGENCY CERTIFICATIONS

FCC Part 15.247 Module Certified (Mobile)

The APEX LT modules comply with Part 15 of the Federal Communications Commission rules and regulations. To meet the FCC Certification requirements, the user must meet these regulations:

- The text on the FCC ID label provided with the module must be placed on the outside of the final product.
- The modules may only use the antennas that have been tested and approved with these modules:
 - The on-board PCB trace antenna
 - Nearson S131CL-5-RMM-2450S antenna.

To meet the Section 15.209 emission requirements in the restricted frequency bands of Section 15.205, the transceiver transmitter power for the APEX LT (EM260) module needs to be reduced from the typical maximum setting on the upper two channels (2475 MHz and 2480 MHz). Maximum values are TBD.

Per Section 2.109, the APEX LT module has been certified by the FCC for use with other products without additional certification. Any modifications to this product may violate the rules of the Federal Communications Commission and make operation of the product unlawful.

Per Sections 15.107 and 15.109, the user's end product must be tested for unintentional radiators compliance.

Per Section 47 C.F.R. Sec.15.105(b), the APEX LT modules is certified as mobile devices for the FCC radiation exposure limits set forth for an uncontrolled environment. The antennas used with these modules must be installed to provide a separation distance of at least 8 inches (20cm) from all persons. If the module is to be used in a handheld application, the user is responsible for passing additional FCC part 2.1091 rules (SAR) and FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields, OET Bulletin and Supplement C.

IC Certification – Canada

The APEX LT module is IC certified. The labeling requirements for Industry Canada are similar to those of the FCC. A visible label on the outside of the final product must display the IC labeling. The user is responsible for the end product to comply with IC ICES-003 (Unintentional radiators).

CE Certification – Europe

The APEX module is CE certified. The CE marking must be affixed legibly and indelibly to a visible location on the user's product.

FCC Approved Antennas

- **Integrated PCB trace antenna**
- **Nearson S131CL-5-RMM-2450S** – A 2.4GHz Dipole antenna with a 5 inch cable and a right angle MMCX connector.

SHIPMENT, HANDLING, AND STORAGE

Shipment

The Apex LT Module is delivered in trays of 32. Each package consist of 5 trays and therefore the total module quantity per package is 160.

Handling

The Apex LT Module is designed and packaged to be processed in an automated assembly line.

!Warning The Apex LT Module contain a highly sensitive electronic circuitry. Handling without proper ESD protection may destroy or damage the module permanently.

!Warning According to JEDEC ISP, the Apex LT Module is moisture sensitive devices. Appropriate handling instructions and precautions are summarized in Section 2.1. Read carefully to prevent permanent damage due to moisture intake.

Moisture Sensitivity Level (MSL)

MSL 3, per J-STD-033
