## Precautions

### Correct Use

#### Hollow Pipe

The cord has a hollow pipe in order to keep the pressure inside the Sensor the same as the atmospheric pressure. If the pipe is clogged, the accuracy of the Sensor may be lowered.

Do not bend or impose a heavy weight on the output cord.

Make sure that the tip of the output cord is open and not clogged with dust or water.

If it is necessary to cut the output cord, make sure that the tip of the hollow pipe is not clogged.

#### Diaphragms

If the diaphragms are damaged, the Unit will not operate properly. Do not insert a screwdriver or steel wire into the interior of the pressure-sensitive parts.

The characteristics of the Unit will change if foreign material is stuck to the stainless steel diaphragm.

### Mounting

The mounting screw for the pressure leading part is a PT1/4 taper screw. Do not use any other type of screw.

Apply sealing tape to the PT1/4 screw part so that there will be no pressure leakage.

The most suitable wrench is 22 mm in size.

Make sure that the maximum tightening torque applied to mount the E8AA is 49 N • m (500 kgf • cm).

Do not use the E8AA for applications in which the E8AA comes into direct contact with medical or food products.
