Subject: Material change on the case and bushing of the ET Series Toggles and Rockers from Thermo Set and Red 6/6 Nylon to Natural 4/6 Nylon

To Whom It May Concern:

This notification is being provided to C&K Customers and Distributors who receive the following series from C&K:

ET Series Toggles

ET Series Rockers

Reason for Change: Standardizing 4/6 Nylon on sub-miniature series. 4/6 nylon has a more robust temperature range for processing.

Effect on Product:

There will be no effect to the form, fit, and function of these switches. C&K has been using red 6/6 nylon and thermo set in this series for many years. C&K will now be using a natural (white) 4/6 nylon that has a higher temperature rating. This is the same material that is currently being used on the SMT versions of the ET Series.

Product Delivery during Transition:

Manufacturing sites will transition to the 4/6 nylon once current inventory of the red 6/6 nylon has been consumed.

If you need additional information, please contact your local C&K Sales Representative or Customer Service Representative.

The C&K team is working to ensure a smooth, efficient transition and appreciates your support.

With best regards,

David Webber
