

STE45NK80ZD

N-channel 800V - 0.11Ω - 45A ISOTOP SuperFREDmesh™ MOSFET

General features

Туре	V _{DSS}	R _{DS(on)}	I _D	Pw
STE45NK80ZD	800V	<0.13Ω	45A	600W

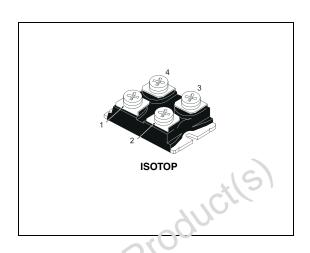

- Extremely high dv/dt capability
- 100% avalanche tested
- Very low intrinsic capacitances
- Very good manufacturing repeatibility

Description

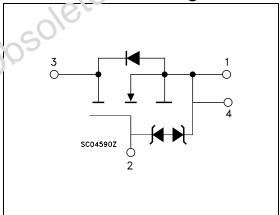

The SuperFREDMesh™ series is obtained through an extreme optimization of ST's well established strip-based PowerMESH™ layout. In addition to pushing on-resistance significantly down, special care is taken to ensure a very good dv/dt capability for the most demanding applications. Such series complements ST full range of high voltage MOSFETs including revolutionary MDmesh™ products.

2.1 Protection features of gate-to-source zener diodes

The built-in back-to-back Zener diodes have specifically been designed to enhance not only the device's ESD capability, but also to make them safely absorb possible voltage transients that may occasionally be applied from gate to source. In this respect the Zener voltage is appropriate to achieve an efficient and cost-effective intervention to protect the device's integrity. These integrated Zener diodes thus avoid the usage of external components.

4 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
