

## ECMF04-4AMX12

Common mode filter with ESD protection for  
MIPI D-PHY and MDDI interface

### Features

- Very large differential bandwidth > 6 GHz
- High common mode attenuation:
  - -34 dB at 900 MHz
  - -20 dB between 800 MHz and 2.2 GHz
- Very low PCB space consumption
- Thin package: 0.6 mm max
- Lead-free package
- High reduction of parasitic elements through integration

### Applications

- Mobile phones
- Notebook, laptop
- Portable devices
- PND

### Description

The ECMF04-4AMX12 is a highly integrated common mode filter designed to suppress EMI/RFI common mode noise on high speed differential serial buses like MIPI D-PHY or MDDI.

The ECMF04-4AMX12 can protect and filter 2 differential lines.

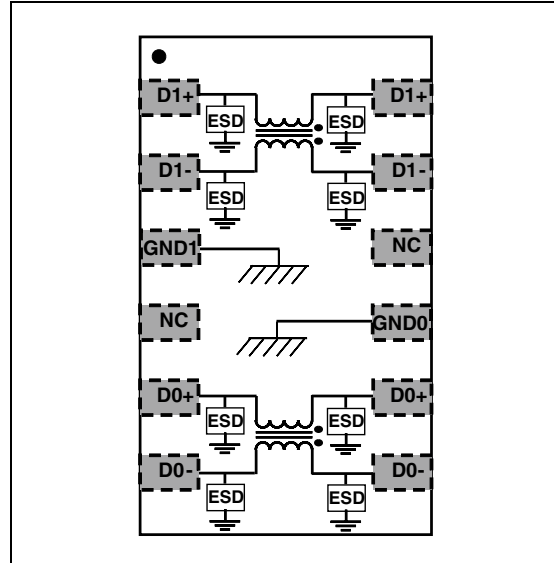

Figure 1. Pin configuration and schematics

# 1 Characteristics

**Table 1. Absolute maximum ratings ( $T_{amb} = 25\text{ °C}$ )**

Symbol	Parameter	Value	Unit
$V_{PP}$	ESD discharge IEC 61000-4-2, contact discharge	8	kV
$I_{DC}$	Maximum DC current	100	mA
$T_{op}$	Operating Temperature	-40 to +85	°C
$T_j$	Maximum junction temperature	125	°C
$T_{stg}$	Storage temperature range	- 55 to +150	°C

**Figure 2. Electrical characteristics (definitions)**

**Table 2. Electrical characteristics (values,  $T_{amb} = 25\text{ °C}$ )**

Symbol	Test conditions	Min.	Typ.	Max.	Unit
$V_{BR}$	$I_R = 1\text{ mA}$	6			V
$I_{RM}$	$V_{RM} = 1.5\text{ V per line}$			100	nA
$R_{DC}$	DC serial resistance		1.8	2.5	$\Omega$

Figure 3.  $S_{dd21}$  differential attenuation measurements ( $Z_{0\text{ diff}} = 100 \Omega$ )

Figure 4.  $S_{cc21}$  common mode attenuation measurements ( $Z_{0\text{ com}} = 50 \Omega$ )

Figure 5.  $S_{dd11}$ ,  $S_{dd22}$  differential return loss measurements ( $Z_{0\text{ diff}} = 100 \Omega$ )

Figure 6.  $S_{dd41} / S_{dd23}$  inter-lane differential cross-coupling measurements ( $Z_{0\text{ diff}} = 100 \Omega$ )

## 4 Package information

- Epoxy meets UL94, V0
- Lead-free packages

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK<sup>®</sup> is an ST trademark.

## 5 Recommendation on PCB assembly

### 5.1 Stencil opening design

1. General recommendation on stencil opening design
  - a) Stencil opening dimensions: L (Length), W (Width), T (Thickness).

**Figure 18. Stencil opening dimensions**

- b) General design rule
  - Stencil thickness (T) = 75 ~ 125 μm
  - Aspect ratio =  $\frac{W}{T} \geq 1.5$
  - Aspect area =  $\frac{L \times W}{2T(L + W)} \geq 0.66$

2. Reference design
  - a) Stencil opening thickness: 100 μm
  - b) Stencil opening for leads: Opening to footprint ratio is 90%.

**Figure 19. Recommended stencil window position**

## 5.2 Solder paste

1. Use halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. "No clean" solder paste recommended.
3. Offers a high tack force to resist component displacement during PCB movement.
4. Use solder paste with fine particles: powder particle size 20-45  $\mu\text{m}$ .

## 5.3 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.
3. Standard tolerance of  $\pm 0.05$  mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

## 5.4 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

## 5.5 Reflow profile

Figure 20. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement.

## 5.6 Layout recommendation

Connection to PCB GND must be as short as possible to ensure ESD remaining voltage and  $S_{CC21}$  performance.

Figure 21. Layout recommendation

## 6 Ordering information

Table 4. Ordering information

Order code	Marking	Package	Weight	Base qty	Delivery mode
ECMF04-4AMX12	KC <sup>(1)</sup>	Micro QFN	7.25 mg	3000	Tape and reel 7"

1. The marking can be rotated by 90° to differentiate assembly location

For the latest information on available order codes see the product pages on [www.st.com](http://www.st.com).

## 7 Revision history
