## INCL. CONTROLLER ST7036 FOR 4-/8-BIT, SPI (4-WIRE)

**available for 1 pc. off !  
even with LED: 5.8mm flat**

### TECHNICAL DATA

- \* HIGH-CONTRAST LCD SUPERTWIST DISPLAY
- \* OPTIONAL LED BACKLIGHT UNITS IN DIFFERENT COLORS
- \* 1x8, 2x16 AND 3x16 WITH 12.0 mm / 5.6 mm AND 3.6 mm CHARACTER HEIGHT
- \* ST 7036 CONTROLLER FOR 4-BIT, 8-BIT AND SPI (4-WIRE) INTERFACE
- \* POWER SUPPLY +3.3V OR +5V SINGLE SUPPLY (typically 250µA)
- \* NO ADDITIONAL VOLTAGES REQUIRED
- \* OPERATING TEMPERATURE RANGE -20 THROUGH +70°C
- \* LED BACKLIGHT 3 through 80mA@3.3V or 2 through 40mA@5V
- \* NO MOUNTING REQUIRED, SIMPLY SOLDER INTO PCB

## EA DOG SERIES

With its EA DOG series, ELECTRONIC ASSEMBLY presents the world's first display series which will run on 3.3 V systems without auxiliary power. They can, of course be used on traditional 5 V systems.

Unlike normal LCD modules, you order the display and the corresponding backlight separately. This gives you a wealth of possible combinations.

Designed for compact hand-held devices, this modern LCD range provides a number of real benefits with or without backlight:

- \* extremely compact at 55 x 31 mm at the standard font size of 5.57 mm (2 x 16)
- \* ultra-flat at 2.0 mm without backlight or 5.8 mm including LED backlight
- \* 4-bit, 8-bit and SPI interface (4-wire)
- \* typical power consumption of only 250µA in full operation (LED white backlight as of 3mA)
- \* easy installation by simply soldering into the board
- \* A whole range of design variants (63) can be supplied as of single units
- \* Changing background color

## SETTING THE CONTRAST

The contrast on all displays of the EA DOG series can be set with a command. This is done using bits C0 through C5 in the commands "Contrast Set" and "Power/Icon Control/Contrast Set". Generally, the contrast is set once and kept constant across the entire operating temperature range (-20 through +70°C) thanks to the integrated temperature compensation function.

Even when run at 3.3 V, the displays do not require any additional negative voltage!

## LED BACKLIGHTS

6 different variants are available for individual backlighting: white, yellow/green, blue, red, amber and full color.

For monochrome backlights, 2 separate LED paths are available, which can be switched in parallel or in series to ideally match the system voltage. This means that all the backlights can be run either at 5 V or at 3.3 V.

Operation of the backlight requires an external series resistor for current limiting. This can be calculated from  $R=U/I$ ; you will find the values in the table. To improve life time it is recommended to use a current source only.

The operating life of the yellow/green, red and amber backlights is 100,000 hours and that of the white and blue backlights much shorter.

**Important:** Never operate the backlight directly on a 5 V / 3.3V supply, as this can immediately destroy the LEDs!

## INSTALLATION

First, the display and the corresponding backlight are clipped together. The complete unit is then inserted into a PCB and soldered. Note that the 4 pins for the backlight must also be soldered from the top.

**Important:** There are one or two protective films on the display (top and/or rear side) and one on each backlight. Those have to be removed during or after production.

### 5 DIFFERENT TECHNOLOGIES

As a standard we provide 5 different technologies as STN and FSTN:

display type	technology	optional backlight	readability	display color non backlighted	display color with backlighted	recommended backlight color
	FSTN pos. transfective	it's fine with and without backlight	readable even without backlight	black on white	black on backlight color	white, blue, RGB
	STN pos. yellow/green transmissive	backlight unit required	readable even without backlight	dark green on yellow/green	black on yellow/green or amber	yellow/green, amber
	STN neg. blue transmissive	usage only with backlight	---	---	backlight color on blue background	white, yellow/green
	FSTN neg. transmissive	usage only with backlight	---	---	backlight color on black background	white, RGB
	STN pos. yellow/green reflective	no backlight possible	finest readable without backlight	dark green on yellow/green	---	---

### 3 DIFFERENT DISPLAYS

These displays are available for mentioned technologies:

### 6 DIFFERENT BACKLIGHTS

6 different backlight colors are available to match equipments design as much as possible. The most effective and brightest one is the white one EA LED55x31-W.

## APPLICATION EXAMPLES

Different wiring must be used depending on the interface and the power supply. 2 additional capacitors are required for 3.3 V operation.

Note that the COG technology means that the current capacity of the outputs is limited. Therefore, a large load on the bus may cause signal loops and unclean levels. If in doubt, additional pull-down resistors (8051) are required or additional waits/NOPs must be incorporated.

## USB-TEST BOARD EA 9780-2USB

For easy startup, a USB test board is available that can be connected to a PC. An USB cable and a Windows software is supplied with the product. This allows individual text and to be displayed directly on the connected display.

## SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software free from our website: <http://www.lcd-module.de/deu/disk/startdog.zip>
