

Part Number: AADG18080QB12S/3

**ATTENTION**  
OBSERVE PRECAUTIONS  
FOR HANDLING  
ELECTROSTATIC  
DISCHARGE  
SENSITIVE  
DEVICES

## Features

- Super high flux output and high luminance.
- Designed for high current operation.
- Low thermal resistance.
- Silicone resin with glass lens.
- Compatible with IR-reflow processes.
- ESD protection .
- Package : 500pcs / reel.
- RoHS compliant.

## Applications

- Substitution of micro incandescent lamps.
- Portable light source.
- Signal and symbol luminaire for orientation.
- Marker lights (e.g. steps, exit ways, etc).
- Decorative and entertainment lighting.
- Commercial and residential lighting.

## Application Note

Static electricity and surge damage the LEDs.

It is recommended to use a wrist band or anti-electrostatic glove when handling the LEDs.

All devices, equipment and machinery must be electrically grounded.

## Package Dimensions

### Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is  $\pm 0.25(0.01^*)$  unless otherwise noted.
3. The specifications, characteristics and technical data described in the datasheet are subject to change without prior notice.
4. The device has a single mounting surface. The device must be mounted according to the specifications.

## Flux Characteristics at 700mA Ambient Temperature, $T_a = 25^\circ\text{C}$

Part No.	Color	Lens Type	Luminous Flux (lm) @ 700mA [1]			Luminous Flux (lm) @ 700mA
			Code.	Min.	Max.	Typ.
AADG18080QB12S/3	Blue (InGaN)	WATER CLEAR	B4	17	20	20
			B5	20	24	
			B6	24	29	

Note:

1. Minimum luminous flux performance guaranteed within published operating conditions. Kingbright maintains tolerance of +/-15% on flux.

## Optical Characteristics at 700mA Ambient Temperature, $T_a = 25^\circ\text{C}$

Color	Dominant Wavelength [1] $\lambda_D$			Typical Spectral Halfwidth [2] (nm) $\Delta\lambda_{1/2}$	Typical Temperature Coefficient of Dominant Wavelength (nm/ $^\circ\text{C}$ ) $\Delta\lambda_D/\Delta T$	Typical Viewing Angle [3] (degrees) $2\theta_{1/2}$
	Min.	Typ.	Max.			
Blue	450nm	454nm	-	20	0.10	100°

Notes:

1. Dominant wavelength is derived from the CIE 1931 Chromaticity diagram and represents the perceived color.
2. Spectral width at 1/2 of the peak intensity.
3. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is 1/2 of the peak value.

## Electrical Characteristics at 700mA Ambient Temperature, $T_a = 25^\circ\text{C}$

Part No.	Forward Voltage $V_f$ [1] (V)			Typical Temperature Coefficient of Forward Voltage [2] (mV/ $^\circ\text{C}$ ) $\Delta V_f / \Delta T$	Typical Thermal Resistance ( $^\circ\text{C}/\text{W}$ ) $R_{th\ j\text{-slug}}$
	Min.	Typ.	Max.		
AADG18080QB12S/3	4.0	4.6	5.2	-4.3	7

Notes:

1. Kingbright maintains a tolerance of +/- 0.1V on forward voltage measurements.
2. Measured between  $25^\circ\text{C} < T_J < 130^\circ\text{C}$  at  $I_F = 700\text{ mA}$ .

## Absolute Maximum Ratings

Parameter	Blue
DC Forward Current (mA) [1]	700
Peak Pulsed Forward Current (mA)	1000
Average Forward Current (mA)	700
Reverse Voltage (V)	5
ESD Sensitivity	8000V HBM
LED Junction Temperature (°C)	130
Operation Temperature (°C)	-40 - 100
Storage Temperature (°C)	-40 - 110
Soldering Temperature (°C)	260 For 5 Seconds

**Notes:**

1. Proper current derating must be observed to maintain junction temperature below the maximum.

## Moisture Sensitivity

AADG18080 LEDs are packaged in airtight and moisture-resistant bags to prevent moisture absorption which may lead to catastrophic failure in reflow soldering process. Kingbright recommends that the devices must be baked before soldering if they are removed from the original package, and are exposed to environmental conditions for longer than the durations (unit: days) defined in the table below. Recommended baking conditions are 24 hours at 80°C.

Temperature	Maximum Percent Relative Humidity						
	30%	40%	50%	60%	70%	80%	90%
30°C	9	5	4	3	1	1	1
25°C	12	7	5	4	2	1	1
20°C	17	9	7	6	2	2	1

## Storage Conditions

After being removed from the original sealed package, AADG18080 LEDs should be stored at a temperature of 25 °C with a relative humidity lower than 10%. Under such conditions, storage duration is excluded from the exposure duration as defined in the Moisture Sensitivity section.

### Light Output Characteristics

# Kingbright

VF-Forward Voltage (V)  
Forward current vs.  
Forward voltage

IF-Forward Current (mA)  
Relative luminous vs.  
Forward current

Maximum forward current vs. Ambient temperature, based on  $T_{max} = 130^{\circ}C$ .

Representative Typical Spatial Radiation Pattern.

Reflow soldering is recommended and the soldering profile is shown below.  
Other soldering methods are not recommended as they might cause damage to the product.

Reflow Soldering Profile For Lead-free SMT Process.

NOTES:

1. We recommend the reflow temperature 245°C(+/-5°C). The maximum soldering temperature should be limited to 260°C.
2. Don't cause stress to the epoxy resin while it is exposed to high temperature.
3. Number of reflow process shall be 2 times or less.

### Heat Generation:

1. Thermal design of the end product is of paramount importance. Please consider the heat generation of the LED when making the system design. The coefficient of temperature increase per input electric power is affected by the thermal resistance of the circuit board and density of LED placement on the board, as well as other components. It is necessary to avoid intense heat generation and operate within the maximum ratings given in this specification.

2. Please determine the operating current with consideration of the ambient temperature local to the LED and refer to the plot of Permissible Forward current vs. Ambient temperature on CHARACTERISTICS in this specification. Please also take measures to remove heat from the area near the LED to improve the operational characteristics on the LED.

3. The equation ① indicates correlation between  $T_j$  and  $T_a$ , and the equation ② indicates correlation between  $T_j$  and  $T_s$

$$T_j = T_a + R_{thj-a} * W \quad \text{①}$$

$$T_j = T_s + R_{thj-s} * W \quad \text{②}$$

$T_j$  = dice junction temperature: °C

$T_a$  = ambient temperature: °C

$T_s$  = solder point temperature: °C

$R_{thj-a}$  = heat resistance from dice junction temperature to ambient temperature : °C /W

$R_{thj-s}$  = heat resistance from dice junction temperature to  $T_s$  measuring point : °C /W

$W$  = inputting power (IFx VF) : W

## Recommended Soldering Pattern (Units : mm ; Tolerance: $\pm 0.1$ )

Solder resist

## Tape Dimensions (Units : mm)
