INTRODUCTION

AVR-H128-CAN is inexpensive way to develop and prototype circuits with AT90CAN128 without need to deal with SMD soldering. All microcontroller pins are available on extension header with 0.1" and power supply, oscillators, ICSP, JTAG are wired, so all you need to do is to connect your additional components to the AVR ports, as the step is 0.1" these headers perfectly fit the prototype sea of pad boards with 0.1" step.

ELECTROSTATIC WARNING

The AVR-H128-CAN board is shipped in protective anti-static packaging. The board must not be subject to high electrostatic potentials. General practice for working with static sensitive devices should be applied when working with this board.

BOARD USE REQUIREMENTS

Cables: The cable you will need depends on the programmer/debugger you use. If you use AVR-JTAG or AVR-PG1 you will need RS232, if you use AVR-USB-JTAG or AVR-ISP500/TINY/ISO you will need 1.8 m A-B USB cable, if you use AVR-PG2, you will need LPT cable.

Hardware: One of OLIMEX Programmers/Debuggers – AVR-JTAG, AVR-USB-JTAG, AVR-ISP500, AVR-ISP500-TINY, AVR-ISP500-ISO, AVR-PG1, AVR-PG2.

**Software:** AVR C compiler.
