## DESCRIPTION

NEC's UPC8151TB is a silicon RFIC designed as a buffer amplifier for cellular or cordless telephones. This low current amplifier operates on 3.0 V and is housed in a 6 pin super minimold package.
The IC is manufactured using NEC's 20 GHz ft NESAT ${ }^{\text {TM }}$ III silicon bipolar process. This process uses silicon nitride passivation film and gold electrodes. These materials protect the chip surface from external pollution and prevent corrosion/ migration. Thus, this IC has excellent performance, uniformity and reliability.

## PIN FUNCTIONS

| Pin No. | Symbol | Applied Voltage | Description | Internal Equivalent Circuit |
| :---: | :---: | :---: | :---: | :---: |
| 1 | INPUT |  | Signal input pin. An internal matching circuit provides a $50 \Omega$ match over a wide bandwidth. This pin must be coupled to signal source with a blocking capacitor. |  |
| 4 | OUTPUT | Vcc through external inductor. | Signal output pin. This output is designed as an open collector. Due to the high impedance output this pin should be externally equipped with an LC matching circuit. |  |
| 6 | Vcc | 2.4 to 3.3 | Power supply pin. This pin should be externally equipped with a bypass capacitor to minimize ground impedance. |  |
| $\begin{aligned} & 2 \\ & 3 \\ & 5 \end{aligned}$ | GND | 0 | Ground pin. This pin should be connected to system ground with minimum inductance. Ground pattern on the board should be formed as wide as possible. All the ground pins must be connected together with wide ground pattern to minimize impedance difference. |  |

## Subject: Compliance with EU Directives

CEL certifies, to its knowledge, that semiconductor and laser products detailed below are compliant with the requirements of European Union (EU) Directive 2002/95/EC Restriction on Use of Hazardous Substances in electrical and electronic equipment (RoHS) and the requirements of EU Directive 2003/11/EC Restriction on Penta and Octa BDE.

CEL Pb-free products have the same base part number with a suffix added. The suffix -A indicates that the device is Pb -free. The -AZ suffix is used to designate devices containing Pb which are exempted from the requirement of RoHS directive (*). In all cases the devices have Pb-free terminals. All devices with these suffixes meet the requirements of the RoHS directive.

This status is based on CEL's understanding of the EU Directives and knowledge of the materials that go into its products as of the date of disclosure of this information.
