TDK Balanced Antenna for Use in UWB Applications

TDK has developed a multilayer chip antenna with a patented balanced radiator structure. The antenna's unique structure allows it to maintain similar performance regardless of ground plane size. Unlike monopole antennas, which are dependent on ground plane size, this antenna has been designed for ease of integration in various applications without the worry of complex board re-designs. It is ideal for use in CardBus, CompactFlash or USB designs.

There is a significant difference in ground plane size but almost no difference in VSWR results. The antenna bandwidth is not detuned by changing the ground plane size.
