# High Frequency Relay

# Compact High Frequency Relays with 2 Form C (DPDT) Contacts

- New Space-saving version with smaller ground terminal footprint is available. ("-S" versions)
- Handles 1 A, 30 VDC discrete load and 1 W at 1GHz.
- Single-coil latching models available.
- Ambient temperature range: -40° to 70°C
- Low coil power consumption: 100 mW.
- Ideal for instrumentation and high-speed LAN network equipment.
- RoHS Compliant

# **Ordering Information**

PCB Footprint	Max.Load	Coil Voltage	Non-Latching part number	Single-coil latching part number					
Standard ground	1 A at 30 VDC,	3 VDC	G6K-2F-RF DC3	G6KU-2F-RF DC3					
terminal	0.3 A at 125 VDC	4.5 VDC	G6K-2F-RF DC4.5	G6KU-2F-RF DC4.5					
		5 VDC	G6K-2F-RF DC5	G6KU-2F-RF DC5 G6KU-2F-RF DC6					
		6 VDC	G6K-2F-RF DC6						
		9 VDC	G6K-2F-RF DC9	G6KU-2F-RF DC9					
		12 VDC	G6K-2F-RF DC12	G6KU-2F-RF DC12					
		24 VDC	G6K-2F-RF DC24	G6KU-2F-RF DC24					
Space-saving		3 VDC	G6K-2F-RF-S DC3	G6KU-2F-RF-S DC3					
ground terminal		4.5 VDC	G6K-2F-RF-S DC4.5	G6KU-2F-RF-S DC4.5					
		5 VDC	G6K-2F-RF-S DC5	G6KU-2F-RF-S DC5					
		6 VDC	G6K-2F-RF-S DC6	G6KU-2F-RF-S DC6					
		9 VDC	G6K-2F-RF-S DC9	G6KU-2F-RF-S DC9					
		12 VDC	G6K-2F-RF-S DC12	G6KU-2F-RF-S DC12					
		24 VDC	G6K-2F-RF-S DC24	G6KU-2F-RF-S DC24					

Note: The above listed models are packaged in trays of 300. They are also available in Tape and Reel packaging.

1. Place "-TR03" before the coil voltage to obtain Tape and Reel packaging, in quantities of 300 pieces per reel.

 Place "-TR09" before the coil voltage to obtain Tape and Reel packaging, in quantities of 900 pieces per reel. Examples: G6K-2F-RF-S-TR09 DC5

G6KU-2F-RF-TR03 DC12

3. "-TR03" and "-TR09" is only used to identify the tape quantity when ordering and is not marked on the product, itself.

## Contact Ratings

Resistive load	
Au alloy on Ag base	
0.3 A at 125 VAC; 1 A at 30 VDC 1 W at 1 GHz (See note.)	
1 A	
125 VAC, 60 VDC	
1 A	
37.5 VA (AC); 30 W (DC)	
-	Au alloy on Ag base           0.3 A at 125 VAC; 1 A at 30 VDC           1 W at 1 GHz (See note.)           1 A           125 VAC, 60 VDC           1 A

**Note:** This value is for a load with V.S.W.R.  $\leq$  1.2

### OMRON

### ■ Coil Ratings

Rated voltage	Rated current	Coil resistance	Must operate voltage	Must release voltage	Maximum voltage	Rated power consumption
3 VDC	33.0 mA	91 Ω	80% max. of rated		150% of rated voltage	Approx. 100 mW
4.5 VDC	23.2 mA	194 Ω	voltage	voltage		
5 VDC	21.1 mA	237 Ω				
6 VDC	17.6 mA	341 Ω	(75% max. of rated set voltage for	(75% max. of rated reset voltage for		
9 VDC	11.3 mA	795 Ω	0	latching models)		
12 VDC	9.1 mA	1,315 Ω				
24 VDC	4.6 mA	5,220 Ω	1			

Note: 1. The rated current and coil resistance are measured at a coil temperature of  $23^{\circ}$ C with a tolerance of  $\pm 10^{\circ}$ .

- 2. The operating characteristics are measured at a coil temperature of 23°C.
- 3. The maximum voltage is the highest voltage that can be imposed on the Relay coil instantaneously.

### ■ High Frequency Characteristics at 1 GHz

Isolation	20 dB min. between contacts of the same pole							
	30 dB min. between contacts of different poles							
Insertion loss	0.2 dB max.							
V.S.W.R.	1.2 max.							
Maximum transmission capacity	3 W (See note 3)							
Maximum switching capacity	1 W (See note 3)							

Note: 1. The impedance of the measurement system is 50  $\Omega$ .

2. The above values are initial

3. These values are for a load with V.S.W.R.  $\leq$  1.2

### ■ Characteristics

lte	em	Single-side stable models	Single-winding latching models						
		G6K-2F-RF(-S)	G6KU-2F-RF(-S)						
Contact resistance (See	note 2.)	100 mΩ max.							
Operating (set) time (See	note 3.)	3 ms max. (approx. 1.4 ms)	3 ms max. (approx. 1.2 ms)						
Release (reset) time (See	note 3.)	3 ms max. (approx. 1.3 ms)	3 ms max. (approx. 1.2 ms)						
Minimum set/reset pulse	time		10 ms						
Insulation resistance (Se	e note 4.)	1,000 M $\Omega$ min. (at 500 VDC)							
Dielectric strength	Between coil and contacts	750 VAC, 50/60 Hz for 1 min							
	Between contacts of different poles	750 VAC, 50/60 Hz for 1 min							
	Between contacts of the same pole	750 VAC, 50/60 Hz for 1 min							
	Between ground and coil/contacts	500 VAC, 50/60 Hz for 1 min							
Vibration resistance	Destruction	10 to 55 Hz, 5-mm double amplitude and 55 to 500 to 55 Hz, 300 m/s <sup>2</sup>							
	Malfunction	10 to 55 Hz, 3.3-mm double amplitude and 55 to 500 to 55 Hz, 200 m/s <sup>2</sup>							
Shock resistance	Destruction	1,000 m/s <sup>2</sup>							
	Malfunction	750 m/s <sup>2</sup>							
Endurance	Mechanical	50,000,000 operations min. (at a switching frequency of 36,000 operations/hour)							
	Electrical	100,000 operations min. (at a switching frequency of 1,800 operations/hour)							
Ambient temperature		Operating: -40°C to 70°C (with no icing or condensation)							
Ambient humidity		Operating: 5% to 85%							
Weight		Approx. 0.95 g							

Note: 1. The above values are initial values.

2. The contact resistance was measured with 10 mA at 1 VDC with a voltage drop method.

3. Values in parentheses are typical values.

4. The insulation resistance was measured with a 500-VDC megohmmeter applied to the same parts as those used for checking the dielectric strength.

### G6K-2F-RF-S

Note: 1. Refer to the G6K specification for basic specifications and characteristics not shown above
2. Ambient temperature condition: 23°C

3. The high-frequency characteristics depend on the mounting board. Be sure to check actual operation, including durability, in actual equipment before use.

# Dimensions

Note: All dimensions are in millimeters unless otherwise indicated

# **Tape Packaging Specifications**

- Add "-TR03" or "-TR09" before the coil voltage to order relays in Tape and Reel packaging. If "-TR03" or "-TR09" is not included, then the relays will be provided in trays of 300 relays per tray.
  - - Add "-TR03" to obtain 300 relays per reel
  - - Add "-TR09" to obtain 900 relays per reel

### Recommended Soldering Method

1. Temperature Profile for Lead Solder (Measured at the PCB)

3. The thickness of cream solder to be applied should be between 200 and 250 μm and the land pattern should be based on Omron's recommended PCB pattern. To maintain the correct soldering joint shown in the following diagram, we recommend applying solder using the soldering conditions shown above. Check the soldering in the actual mounting conditions prior to use.

### Precautions for correct use

For general precautions, refer to Omron's Relay Technical guidelines, contained in Omron's relay catalog.

### **Relay Handling**

Do not unpack the relay until ready to mount it. Use the relay as soon as possible after opening the moisture-proof bag. Otherwise, the terminals may tarnish and seal failure may occur after the solder process.

When washing the product after soldering, use a water-based or alcohol-based solvent. Keep the solvent temperature below  $40^{\circ}$ C. Do not put the relay in a cold cleaning bath immediately after soldering.

### **Operating, Storage Environment**

If the relay is stored for a long time in an adverse environment with high temperature, high humidity, organic or sulfide gases, then sulfide or oxide films will form on the contact surfaces. These films may result in unstable contact, contact problems or function problems. Therefore, operate, store or transport the product under specified environmental conditions.

- 1. Use in locations where the relay is not exposed to corrosive gas such as hydrogen sulfide gas or salty air.
- 2. Use in locations where no visible dust exists.
- 3. Use in locations where the product is not exposed to direct sunlight, rain or snow.
- 4. Do not apply force to the product which may result in deformation or change in quality of the product.

### Coating

The relay mounted on the PCB may be coated or washed, but do not apply silicone coating or detergent containing silicone, otherwise, the silicone coating or detergent may remain on the surface of the relay.

#### Latching Relay Mounting

Make sure that excess vibration or shock doesn't set or reset the relay during normal operation. The relay is shipped in the 'reset' position. Shock or vibration during shipping may require the application of a reset signal, prior to operation.

### **Claw Securing Force During Automatic Mounting**

During automatic insertion of relays, make sure to set the securing force of each claw to the following so that the relay's characteristics will be maintained.

Direction A: 1.96 N max. Direction B: 4.90 N max. Direction C: 1.96 N max.

Secure the claws to the shaded area. Do not attach them to the center of the relay or just one part of the relay.

#### Maximum Allowable Voltage

The maximum allowable voltage of the coil can be obtained from the coil temperature increase and the heat-resisting temperature of the coil insulating sheath material. (Exceeding the heat-resisting temperature may result in burning or short-circuiting.) The maximum allowable voltage also involves important restrictions which include the following;

- Must not cause thermal changes in or deterioration of the insulating material, which may result in films developing on the contacts.
- · Must not cause damage to other control devices.
- Must not cause any harmful effect on people.
- · Must not cause fire.

Therefore, be sure to use the maximum allowable voltage as specified in the catalog. As a rule, the rated voltage must be applied to the coil. A voltage exceeding the rated value, however, can be applied to the coil providing that the voltage is less than or equal to the maximum allowable voltage. It must be noted that continuous voltage application to the coil will cause a coil temperature increase which may affect characteristics such as electrical life and coil insulation.

Consider using a latching relay instead of a non-latching relay with a continuous voltage applied to the coil.
