Precautions

■ POSITIVE GUIDED CONTACTS

When NO contacts are welded, the coil will be non-energized so all NC contacts will maintain a distance between the contacts of 0.5 mm minimum. Likewise if NC contacts are welded, the coil will be energized so all contacts will maintain a distance between each other of 0.5 mm minimum.

Caution

Do not touch the terminal area of the Relays or the socket terminal area (charged area) while power is ON. Electric shock will result.

Safety Relays

A Safety Relay is a relay with which a safety circuit can be configured. For common precautions when using and handling relays, consult Omron.

Contacts

The coil terminals have polarity (positive and negative). Operation is not possible if these are connected in reverse.

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
