50 g's

The sensitive 136C Centigrid<sup>®</sup> relay has a high resistance coil, thus requiring extremely low operating power (200 mW, typical). The advantages of reduced heat dissipation and power supply demands are a plus.

The sensitive 136C Centigrid<sup>®</sup> relay is an ultraminiature, hermetically sealed, armature relay capable of being directly driven by most IC logic families. Its low

profile height and .100" grid spaced terminals, which precludes the need for

spreader pads, make it ideal for applications where extreme packaging density

The basic concept and internal mechanical structure are similar to the 114 DPDT relay. The following unique construction features and manufacturing

techniques provide overall high reliability and excellent resistance to

Unique uni-frame design providing high magnetic efficiency and mechanical

Advanced cleaning techniques provide maximum assurance of internal

· Precious metal alloy contact material with gold plating assures excellent

High force/mass ratios for resistance to shock and vibration.

high current and dry circuit switching capabilities.

By virtue of its inherently low intercontact capacitance and contact circuit losses, the 136C relay has proven to be an excellent ultraminiature RF switch for frequency ranges well into the UHF spectrum. A typical RF application for the Centigrid<sup>®</sup> relay is in handheld radio transceivers, wherein the combined features of good RF performance, small size, low coil power dissipation and high reliability make it a preferred method of Transmit- Receive switching (see Figure 1).

The sensitive Series 136C utilizes an internal silicon diode for coil suppression, a Zener diode to protect the MOSFET gate input, and an N-channel enhancement-mode MOSFET chip that enables direct relay interfacing with most microprocessor and IC logic families (CMOS, TTL and MOS).

#### **SERIES 136C**

## GENERAL NOTES

- 1. Relay contacts will exhibit no chatter in excess of 10 µsec or transfer in excess of 1 µsec.
- "Typical" characteristics are based on available data and are best estimates. No on-going verification tests are performed.
- 3. Unless otherwise specified, parameters are initial values.
- 4. Maximum rated gate voltage = 15 Vdc.
- Unless otherwise specified, relays will be supplied with either gold plated or solder coated leads.
- 6. The slash and character appearing after the slash are not marked on the relay.
- 7. Screened HI-REL versions available. Contact factory.

Notes:

Logic 1 activates the relay. Logic 0 de-activates the relay.
