# OMRON

## **Emergency Stop Switch**

#### For Panel Cutout of 16 mm

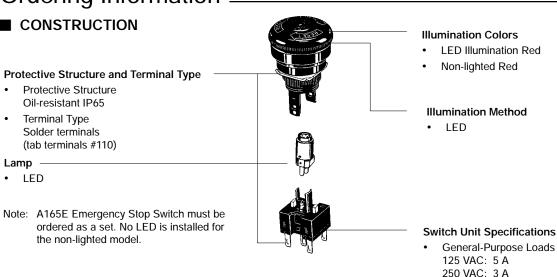

- Modular construction, easy installation
- Positive opening mechanism with a minimum contact separation of 3 mm in accordance with EN60947-5-1, ⊖ for NC contacts
- Conforms to EN418, EN60947-5-1
- High reliability, IP65
- Short mounting depth, less than 28.5 mm below panel
- Quick and easy assembly, snap-in Switch Unit

#### ■ CHARACTERISTICS

Item		Emergency Stop Switch	
Allowable operating	Mechanical	20 operations/min max.	
frequency	Electrical	10 operations/min max.	
Insulation resistance		100 MΩ min. (at 500 VDC)	
Dielectric strength		1,000 VAC, 50/60 Hz for 1 min between terminals of same polarity 2,000 VAC, 50/60 Hz for 1 min between terminals of different polarity and also between each terminal and ground 1,000 VAC, 50/60 Hz for 1 min between lamp terminals (see note)	
Vibration resistance	Malfunction	10 to 55 Hz, 1.5-mm double amplitude (malfunction within 1 ms)	
Shock resistance	Mechanical	500 m/s <sup>2</sup> (50G)	
	Malfunction	300 m/s <sup>2</sup> (30G) max. (malfunction within 1 ms), 150 m/s <sup>2</sup> (15G) max. In case of A165E U series	
Life expectancy	Mechanical	100,000 operations min.	
	Electrical	100,000 operations min.	
Ambient temperature		Operating: -10°C to 55°C (with no icing or condensation) Storage: -25°C to 65°C (with no icing or condensation)	
Ambient humidity		Operating: 35% to 85%	
Electric shock protection class		Class II	
PTI (tracking characteristic)		175	
Degree of contamination		3	
Weight		Approx. 16 g (in case of DPDT Switches)	

Note: LED not mounted. Test them with the LED removed.

#### OPERATING CHARACTERISTICS

Features	Characteristics
Operating force (OF) max.	14.7 N
Releasing force (RF) min.	0.1 N • m
Pretravel (PT)	3.5±0.5 mm (3±0.5 mm In case of A165E U series)

Square

Note: The L+ and L- terminals are not available with the non-lighted models.

## Installation \_\_\_\_\_

#### MOUNTING THE PANEL

After installing the Switch, snap in the Socket Unit from the back of the panel.

#### 1. Installing the Switch

Attach rubber packing or the Yellow Plate onto the Switch from its terminal side. Insert the Switch into the panel from the front. Install the lock ring and mounting nut from the terminal side and tighten.

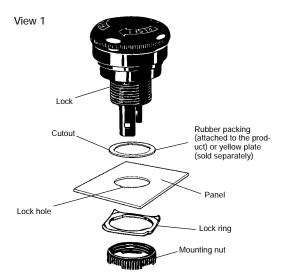

Adjust the slits on the hole of rubber packing and Yellow Plate to the protruding part of the unit.

Note: Rubber packing is not necessary when the Yellow Plate is used.

Tighten the nut to the torque of 0.29 to 0.49 N • m.

Case should be installed with its protruding part adjusted to the slit of the panel hole.

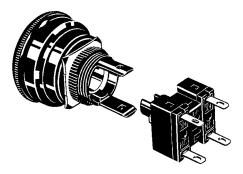

Align the lock ring to the groove of the case so that the edge is drawn to the panel side.

#### 2. Mounting the Socket Unit

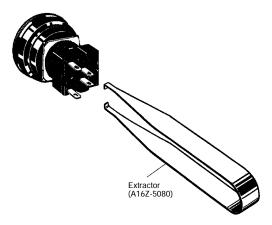

Snap on the Socket Unit to the Switch.

Make sure the Switch and the Socket Unit are in the proper orientation. Align the thin indentations on the case with the white pushbutton markings on the Socket Unit and press the parts together.

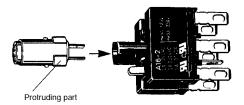

#### 3 Removing the Switch

Grip the part between the Switch holder of the case and the Switch Unit using the A16Z-5080 Extractor, and pull to remove the Switch Unit.

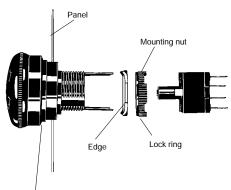

#### 4. Installing the LED Lamp

When mounting the Lamp, make sure it is facing the direction shown in the following diagram. Insert the Lamp while matching the protruding part of the Lamp and the small guides on the outer surface of the case.

Rubber packing or yellow plate (sold separately)

### Precautions

#### CORRECT USE

#### Mounting

Always make sure that the power is turned OFF before mounting, removing, or wiring the Switch, and before performing maintenance.

Do not tighten the mounting nut more than necessary using tools such as pointed-nose pliers. Doing so will damage the mounting nut. The tightening torque is 0.29 to 0.49 N • m.

#### Wiring

Solder terminals and quick-connect terminals (#110) are commonly used for terminals.

Be sure to use electrical wires that are a size appropriate for the applied voltage and carry current (conductor size is 0.5 to 0.75 mm<sup>2</sup>). Perform soldering according to the conditions provided below. If the soldering is not properly performed, the lead wires will become detached, resulting in short-circuits.

- Hand soldering: 30 W, within 5 s
- Dip soldering: 240°C, within 3 s

Wait for one minute after soldering before exerting any external force on the solder.

Use non-corrosive resin fluid as the flux.

Make sure that the electric cord is wired so that it does not touch the Unit. If the electric cord will touch the Unit, then electric wires with a heat resistance of  $100^{\circ}$ C min. must be used.

After wiring the Switch, maintain an appropriate clearance and creepage distance.

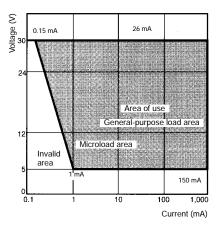

#### Using the Microload

Insert a contact protection circuit, if necessary, to prevent the reduction of life expectancy due to extreme wear on the contacts caused by loads where inrush current occurs when the contact is opened and closed.

The A165E-U allows both a general-purpose load (125 V at 5A, 250 V at 3 A) and a microload. If a general-purpose load is applied, however, the microload area cannot be used. If the microload area is used with a general-purpose load, the contact surface will become rough, and the opening and closing of the contact for a microload may become unreliable.

The minimum applicable load is the N-level reference value. This value indicates the malfunction reference level for the reliability level of 60% ( $\lambda$  60) (conforming to JIS C5003).

The equation,  $\lambda 60 = 0.5 \times 10^{-4}$ /time indicates that the estimated malfunction rate is less than 1/2,000,000 with a reliability level of 60%.

#### LEDs

The LED current-limiting resistor is built-in, so internal resistance is not required.

Rated voltage	Internal limiting resistor
24 VDC	1600 Ω

#### **Operating Environment**

The IP65 model is designed with a protective structure so that it will not sustain damage if water comes in contact with the front of the panel.

The oil-resistant IP65 model uses NBR rubber and is resistant to general cutting oil and cooling oil. Since some particular oils cannot be used with the oil-resistant IP65 model, contact your OMRON representative for details.

If the panel is to be finished with coating, etc., make sure that the panel meets the specified dimensions after the coating.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters into inches, divide by 25.4
